The use of words and phrases that reflect Aramaic usage has been seen as pointing to a late date for the book. However, some of the words relating to the sea voyage may be technical maritime terms, possibly Phoenician in origin, which could have been available at any period. Other grammatical constructions may reflect the earlier influence of Aramaic in the N kingdom. In general, the number of such forms is suggestive of a post-exilic date, but there is no conclusive evidence.

The statement in 3:3 that Nineveh "was" a great city, suggests that it was no longer in existence at the time of composition, i.e., after 612 B.C.

Earlier assumptions that the "universalism" of the book reflect a protest against the strong particularistic attitudes of the returning exiles cannot be proven, and universalistic views may be found in earlier biblical materials.

We have already noted above the possible presence of "quotations" from other parts of the Bible, both within the narrative and "Psalm" section of the book. If these are

accepted as deliberate utilizations of material from elsewhere in the Bible, they are again suggestive of a relatively late date of composition.

In general the nature of the book and the various considerations given above suggest that it is not the work of the 8th century prophet Jonah mentioned in Kings, and that the book is a much later composition, though suggested dates range from the 6th to the 4th century. The same dating problems make it impossible to determine the authorship, once the prophet himself has been excluded.

D. Status of Text and Canonical Position

The text of the book has been remarkably well preserved. The most thorough recent study (Trible 1963: 1–65) indicates the presence and absence of a number of *matres lectionis* which affect the spelling of the words, but not their meaning. The genuineness of a couple of words is questioned because of their unusual form or on metrical grounds, but none of these have major consequences. Similarly the ancient versions raise no significant questions about the MT.

No record is preserved of any dispute about its place in the canon among the Twelve "Minor Prophets," despite its major difference in style to the others. It may owe its place there to the identification of Jonah with the prophet in 2 Kings 14. This would account for its location in the first half of the collection, which is probably based upon the chronological view held at the time of compilation (Wolff, *Dodekapropheton* BK, 53).

E. Theological Issues and Motifs

The use of a narrative form affects the way the book is perceived and received. The onus is placed very firmly upon the reader to interpret the events described. For example, no reason is given in the opening chapter for Jonah's flight from God. This leaves the reader with the responsibility of "gap-filling" about this crucial question. Given the role of Nineveh in Israelite history (the capital of the Assyrian Empire that destroyed the N Kingdom), the reader may well sympathize with an Israelite prophet who refused to go there to preach. But this brings the reader, like Jonah himself, into direct conflict with God's express command, so that the reader is forced to identify with, and even share, the tension experienced by the "hero." Even the explanation offered by Jonah in chapter 4 does not resolve the initial question. Jonah quotes good religious traditions about God being "compassionate and merciful" (see discussion above) but it is still not clear to what he is actually objecting. This leads inevitably to a whole range of possible interpretations, all of which have surfaced in classical religious traditions and modern scholarship (Bickerman 1967; Allen, *Joel, Obadiah* . . . NICOT, 188–191). For example, Jonah was jealous that God's special love for Israel was here being extended to those he considered as Israel's enemies—the particularistic/universalistic conflict; Jonah was committed to a God of strict justice and was scandalized by God's compassion for those he considered to be wicked and due for severe punishment—the justice/mercy conflict. These and other interpretations may be argued out and different weight may be given to the various viewpoints depending on the reader's own concerns or interests.

The significance of this is not that one or the other view is right or wrong, but rather that it is in the nature of "narrative" to be suggestive and allusive in this way rather than to be assertive or dogmatic. The exercise of exploring the possible reasons is as much a part of the "message" of the book as the story itself because it, too, demands that the reader continually reassess his or her view of events and motivations. The reader, like Jonah, is forced to re-evaluate an understanding of the world and of God's will. It is therefore erroneous to focus solely on the character of Jonah and condemn him as a "narrow, chauvinistic, hater of Gentiles" as some extreme interpretations with anti-Jewish overtones have suggested (Golka 1986); it is equally erroneous to identify totally with the author as a sublime, universalistic, almost "pre-Christian Christian" as have others for whom the Hebrew Bible is read in the light of the Christian canon. The narrator who "knows" what is going on, the characters who appear in the story, and the reader who encounters the book, all play their part in a process of interpretation. Thus the nature of the book and the awareness of these implications is vital for an attempt to understand and evaluate it.

We began by listing a series of questions raised by the book and it is worth remembering that it concludes with a question. "If you (Jonah) can have pity . . . should not I (God) have pity. . . ." No answer is offered by the text but various exegetical and liturgical traditions have tended to assume that Jonah said "yes," and was suitably repentant. This need not be the case, and given the frequency with which the author breaks conventions, it is probably best to leave the matter open—or, as the whole thrust of the narrative has been, to leave it to the reader to respond to the challenge posed equally to Jonah and the reader. For that, after all, is the culminating effect of the narrator's strategy of demanding the reader's engagement. The book is subversive in its inversion of conventions and challenging of stereotypes and prejudices. Thus, despite its unconventional narrative form, its place among the prophetic books is ultimately appropriate. It clearly addresses the issue of the relationship of Israel to the outside world, represented as two major tendencies. Yet the polemic does not overwhelm its artistic values. Most strikingly a relatively small vocabulary (for example, the repetition of two verbs alone creates the vivid effect of the storm) is used to considerable effect and creates multiple dimensions of meaning. The significant echoes of other biblical events or narratives provide reference points that lead to startling new understandings, both of the event cited and of the character of Jonah himself. In this, at least, the Book seems to stand within the tradition of interpretation through parable that was to become Rabbinic *midrash*.

JONATHAN MAGONET

JONAM (PERSON) [Gk *Iōnam*]. The father of Joseph (not the "supposed father" of Jesus) and son of Eliakim, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:30). Gk *Iōnam* is read in B, Leningrad and Oxford, and most of the versions, but there is a significant variant Gk *Iōnan,* found in A, G, H, L, and Vulgate. D omits the name, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. The name Jonam occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of eighteen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke I–IX* AB, 501). Kuhn (1923: 208–9) argues that two seemingly parallel lists of names—Luke 3:23–26 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha)—were originally identical, the first perhaps reflecting a Hebrew context and the second, in an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). Jonam, in the 2d list, corresponds to Nahum, in the 1st list. According to Kuhn, Gk *Naoum* representing Heb *nḥwm* was corrupted to Gk *Anoum* representing Heb *ḥnw* or *ḥnn* (cf. Neh 3:30 in LXX B). Gk *Iōnam,* Kuhn believes, is itself a corruption of Gk *Iōanam,* found for Gk *Iōanan* in 1 Chr 3:24a. (Gk *Iōnan* is also found in variants for Gk *Iōanan.*) With no textual variants for Jonah and Nahum to support confusion of the two in the NT, Kuhn's theory has little plausibility.

STANLEY E. PORTER

JONATHAN (PERSON) [Heb *yônātān; yĕhônātān*]. The names Jonathan and Jehonathan (Heb "Yahweh has given") appear to be used interchangeably.

1. A Levite from the town of Bethlehem in Judah, who, according to Judges 17–18, founded a priesthood at Laish (later called Dan). This Levite, whose name (Jonathan) is provided only at the close of the narrative (Judg 18:30), was hired by the Ephraimite Micah to serve as priest in his private shrine (17:7–13). The Danites, searching for new territory, received a favorable oracle from Jonathan as they journeyed northward. The narrative relates that Jonathan was later persuaded by the Danites to serve as the first priest at the new sanctuary at Dan. The image taken from Micah's shrine was housed in this Danite tribal sanctuary (18:11–31). The priesthood founded by Jonathan is said to have continued until the people went into captivity (734 or 722/1 B.C.E.; 18:30).

Jonathan is reported to be a direct descendant of Moses through Gershom (18:30). The MT, however, through the addition of the letter *nun* to the name of Moses (rather than being incorporated into the text, this has been suspended above the line and inserted between the first two consonants of the name Moses), has altered the name of Moses (cf. the versions) to that of Manasseh (the apostate king).

2. See JONATHAN SON OF SAUL.

3. Son of Abiathar, who, together with Zadok, served as priest during the reign of king David (2 Sam 15:36; 1 Kgs 1:42). Stationed at En-rogel at the time of Absalom's revolt, Jonathan and Zadok's son Ahimaaz acted as couriers, conveying to David information pertaining to Absalom's plans which was supplied by the spy Hushai. Upon being discovered and forced to flee, they were assisted in escaping from Absalom's men by a woman at Bahurim, who hid them in a well (2 Sam 15:24–29, 32–37; 17:17–22). It was Jonathan who later brought to Adonijah the news that Solomon had been anointed king (1 Kgs 1:41–48). Solomon removed Abiathar from his office of priest and banished him to Anathoth (2 Kgs 2:26–27). Since Jonathan was also an active supporter of Adonijah, it can be assumed that he shared the fate of his father.

4. King David's uncle (Heb *dôd;* so RSV, JB, NAB; NEB reads "nephew" [cf. 1 Chr 20:7]) and a member of his personal staff (1 Chr 27:32). As usually translated, 27:32 states that Jonathan shared with Jehiel son of Hachmoni the task of tutoring David's sons (see RSV). However, a preferred translation of 27:32 is probably one which does not take Heb *hû*ʾ ("he") with v 32b. The text thus names only Jehiel as the one responsible for such tutoring of David's sons (cf. LXX). Jonathan, who is referred to as a man of understanding and learning, was David's counselor.

5. Son of Shimei or Shimea, David's brother. He slew a Philistine giant at Gath (1 Sam 21:20–21; 1 Chr 20:6–7). His name is given as Jonadab in some mss of the LXX (cf. 1 Sam 13:3). The Philistine slain by Jonathan is one of four warriors identified in 2 Sam 21:15–22 as being among the *yĕlîdê hārāpâ.* As traditionally understood, this designation refers to those who were descendants of Raphah, eponymous ancestor of the Rephaim, a legendary race of giants (RSV translates "descended from the giants"). More recently, however, it has been argued that the Philistine

yĕlîdê hărāpâ was an elite corps of warriors dedicated to a deity. The corps was so designated either because of its emblem, the scimitar, or because *rp'* (a divine epithet) was the patron deity of the corps (see the discussions in L'Heureux and Willesen).

6. One of David's thirty mighty men (2 Sam 23:32; 1 Chr 11:34; see DAVID'S CHAMPIONS). For the MT's "the sons of Jashen, Jonathan, Shammah the Hararite" in 2 Sam 23:32–33 (see RSV), a suggested reading is "Hashem the Gizonite; Jonathan son of (cf. some mss of LXX) Shammah the Hararite" (see, e.g., NEB; cf. 1 Chr 11:34). In 1 Chr 11:34 Jonathan is identified as the son of Shagee rather than as the son of Shammah (1 Sam 23:32; cf. also 23:11).

7. Son of Uzziah. He was in charge of the royal supplies in the provincial towns, villages, and fortresses during the reign of David (1 Chr 27:25).

8. One of the Levites who formed part of a commission sent by Jehoshaphat to teach the law in the cities of Judah (2 Chr 17:8; Jehonathan in RSV and other English translations).

9. A high-ranking government official who held the position of *sōpēr* during the reign of Jehoiakim (Jer 37:15, 20; 38:26). It is probable that Jonathan's office was that of state or royal secretary. He was preceded in this office by Elishama (Jer 36:12, 20–21). The prophet Jeremiah, accused of having deserted to the Babylonians (Jer 37:11–16), was imprisoned in the house of Jonathan, which had been made into a prison.

10. One of the two sons of Kareah who, following the destruction of Jerusalem in 587/6 B.C.E., chose to join Gedaliah, the ruler of Judah, at his administrative center at Mizpah (Jer 40:8 in the MT). However, as is indicated by the LXX and the parallel passage in 2 Kgs 25:23, the MT's "and Johanan and Jonathan sons of Kareah" is to be emended to read "and Johanan son of Kareah" (see RSV, JB, NAB; the NEB follows the MT).

11. The father of Ebed, one of the "heads of their fathers' houses" who returned from exile with Ezra (Ezra 8:1, 6). Ebed, a member of the Adin phratry *(mišpāḥâ)*, was accompanied by the 50 male members of his extended family (Ezra 8:6; 1 Esdr 8:32 has Obed and 250 men).

12. A priest named as one of those who were heads of priestly families in the time of the high priest Joiakim (Neh 12:12–21). He is the head of the family of Malluch (12:14; the MT reads "Malluchi" [cf. however Neh 12:2]).

13. Another priest named in the list of those who were heads of priestly families in the time of the high priest Joiakim (Neh 12:12–21). He is the head of the family of Shemaiah (12:18; JEHONATHAN in RSV and other English translations).

14. A high priest who held office in the post-exilic period. He was the son of Joiada and the father of Jaddua (Neh 12:10–11). The name Jonathan, however, is undoubtedly a scribal error for Johanan (cf. the list of high priests in Neh 12:22; also Neh 12:23). It is known that the high priest during the time of Nehemiah was Eliashib (Neh 3:1, 20). Johanan is identified as the grandson of Eliashib in Neh 12:10, but as the son of Eliashib in Neh 12:23 (although it is possible that Heb *ben* is to be translated as "grandson" in Neh 12:23; cf. NEB, JB). Further, according to Ezra 10:6 (1 Esdr 9:1), Ezra retired to the temple chamber of Jehohanan (Johanan) son of Eliashib. While it is possible that the Jehohanan (Johanan) of Ezra 10:6 is to be identified with the high priest Johanan mentioned in Nehemiah 12 (cf., e.g., the NEB's translation of Heb *ben* as "grandson" in Ezra 10:6), this is far from certain. Such an identification would lend support to the view that a late date for Ezra is to be preferred (from the Elephantine papyri [*CAP*, 30.18, 31.17], we know that a Johanan served as high priest during the reign of Darius II). However, with respect to the high priestly genealogy in Neh 12:10–11, it has recently been suggested that one of the occurrences of the two names Eliashib and Johanan has fallen out of the text by haplography (Cross 1975: 10). According to this hypothesis, the sequence of high priests is as follows: Eliashib I, Johanan I (b. ca. 520 and a contemporary of Ezra), Eliashib II (b. ca. 495 and a contemporary of Nehemiah), Joiada, Johanan II (b. ca. 445; it is this Johanan whose name appears in the Elephantine papyri).

15. The father of Zechariah, one of the Levites who participated in the dedication of the rebuilt walls of Jerusalem in the time of Nehemiah (Neh 12:35; the reference to the priests at the beginning of v 35 [MT reads "of the sons of the priests"] is probably to be taken with vv 33–34). In Neh 12:35, the ancestry of Zechariah and Jonathan is traced back to Asaph, the founder of a guild of temple musicians.

16. A priest who is reported to have led the prayers at a sacrifice during the time of Nehemiah (2 Macc 1:23).

17. Son of Asahel. One of four men who, according to Ezra 10:15 in the MT, stood opposed to either Ezra's reform measures relating to the putting away of foreign wives, or (and this is probably how 10:15 is to be understood) the procedure by which these measures were to be carried out. The ambiguity of the Hebrew text is reflected in most English translations (cf. however the JB, which reads "were opposed to this procedure"). The LXX reads "only Jonathan . . . and Jazias . . . were with me in this" for the MT's "were opposed to this."

18. A Jerahmeelite. Son of Jada, brother of Jether, and father of Peleth and Zaza (1 Chr 2:32–33).

19. Son of Mattathias and leader of the Maccabeans 160–143 B.C.E. Mattathias, who belonged to the priestly family of Joarib (alternately Jehoiarib; cf. 1 Chr 24:7), was a native of Jerusalem who later settled with his family in Modein (1 Macc 2:1). Following the death of his brother Judas in 160 B.C.E., Jonathan, who was nicknamed Apphus (2:2), was quickly recognized as military leader by his own people (9:28–31). Jonathan later attained a position of considerable power and influence when he was able to take advantage of the unstable political situation within the Seleucid empire. Rival claimants to the throne sought Jonathan's support. In order to secure such support, Alexander Balas, a pretender to the throne, appointed Jonathan high priest in 152 B.C.E. (10:15–21). Alexander also appointed Jonathan general and governor of a province (10:65). When Demetrius II Nicator came to power, the privileges extended to Jonathan by Alexander were confirmed. But when Demetrius refused to remove a Syrian garrison from the Acra in Jerusalem, Jonathan threw in his lot with Antiochus, the son of Alexander Balas. Antiochus was supported in his bid for the throne by the general Trypho. Trypho, however, though ostensibly championing

the cause of Antiochus, was in fact seeking to secure the kingdom for himself. In the belief that his own ambitions were threatened by Jonathan, Trypho, through an act of deception, had Jonathan imprisoned in Ptolemais. Jonathan was executed by Trypho and buried near Baskama in Gilead in 143 B.C.E. (12:39–48; 13:12–23). The bones of Jonathan were later taken by Simon and placed in a family grave in Modein (13:25–30). Jonathan was succeeded by his brother Simon. With his assumption of both religious and civil power, Jonathan may be regarded as the one who laid the foundations for the later Hasmonean dynasty (142–63 B.C.E.).

20. A general, who, in 142 B.C.E., was sent by Simon Maccabeus with a large army to fortify the garrison established a year earlier in the coastal port of Joppa (cf. 1 Macc 12:33–34; 14 5) and to expel the occupants from the city (1 Macc 13:11). He was the son of Absalom (who is possibly to be identified with Absalom father of Mattathias [1 Macc 11:70]).

JOHN M. BERRIDGE

JONATHAN SON OF SAUL.

Jonathan was the oldest son of Saul, son of Kish, and his wife Ahinoam, daughter of Ahimaaz. He was the heir to the Saulide throne of Israel before his untimely death at Mt. Gilboa. The throne eventually passed on to David, who is portrayed as having been a very close personal friend of Jonathan.

A. Jonathan from a Literary Perspective

Most of the passages that involve Jonathan appear to have been written to justify David's replacement of the Saulide house on the throne of Israel. Their literary dimension must accordingly be examined fully before any judgment can be made concerning their underlying historical veracity.

Jonathan's opening appearance in the Bible is in 1 Sam 13:2–3, when, as commander of one of Israel's battalions during a planned campaign against the Philistine garrisons controlling the Michmash pass, he is depicted as attacking the Philistine garrison at Gibeah/Geba prematurely, instead of waiting for his father to launch a simultaneous attack against the Philistine garrison at Michmash, on the other side of the wadi, with the remaining Israelite forces. This initial victory forces Saul to have to retreat to Gibeah/Geba, leaving the Michmash outpost intact, and to draw up a new strategy to cope with the Philistine retaliation, which would now include reinforcement troops from the Philistine plain. Needing his own reinforcements, Saul leaves Jonathan at Gibeah/Geba with some troops and goes to Gilgal to muster additional men. While Saul is at Gilgal, Yahweh rejects him as king over Israel for disobeying a divine command, in favor of a new candidate, who is "a man after His own heart" (13:14).

1 Samuel 14 implies that Jonathan, the heir-elect, is the new candidate for king in its recounting of how Jonathan puts his trust in the Lord by following his heart and bravely venturing across the wadi with his weapons bearer, gains access to the Philistine outpost by being mistaken as an Israelite deserter, and slays 20 enemy soldiers, thereby throwing the Philistine forces into chaos and launching what becomes a victorious battle for Israel (14:1–23). Yet Jonathan inadvertently breaks a divinely invoked food ban that his father had imposed on the troops in his absence and fails to repent when he learns the truth (14:24–30). His deed is discovered by oracular consultation with Yahweh through the Urim and Thummim, who declares him to be guilty (14:36–44). Although the troops ransom Jonathan, believing that he has had Yahweh's favor that day in battle (14:45), it is revealed, after the confirmation that Saul has been irrevocably rejected by Yahweh (1 Samuel 15) that David, not Jonathan, is the new candidate whom Yahweh has chosen. Jonathan, the heir to the throne, has been rejected from the kingship because of his insubordination. David is secretly anointed by Samuel to confirm his designation as king-elect (16:1–14).

1 Samuel 13–14 play the dual role of depicting Saul's rejection from the kingship for disobedience to prophetically mediated divine command and of depicting Jonathan's rejection from the role of king-elect for insubordination. The account of Jonathan's rejection appears to have been structured by using the tripartite kingship ritual pattern—the designation of the king-elect, his testing through a military deed, and his subsequent confirmation by coronation after his successful completion of the military deed (Halpern 1981: 125–48; Edelman 1984: 197–99). The first step is presumed because of Jonathan's status as heir-elect by birth. It is also hinted at by Samuel's going, immediately after Saul's rejection at Gilgal (13:15), to Gibeah, where Jonathan is stationed. The second step is represented by the episode in 14:1–23, where Jonathan follows the inclinations of "his heart" by trusting in Yahweh. The third step is aborted because of Jonathan's failure in his testing after his breaking of the divinely imposed food ban (14:24–44). The same pattern can be seen to have been used to structure the account of Saul's rise to the kingship and of David's succession to the throne of Israel. See SAUL.

Jonathan's next appearance is immediately after David's slaying of Goliath, where he is said to have "loved" David as his own soul and to have made a covenant with David, giving him his (royal) robe, his armor, his sword, his bow, and his girdle (1 Sam 18:1–4). At this point David replaces Jonathan as military commander and is reported to have been successful wherever Saul sent him and to have gained the support of all the people and Saul's servants (18:5). The verb *love* in Hebrew can have political overtones, referring to a treaty relationship, and appears to be used in this way in the Jonathan passages (Thompson 1974). These narratives seem to be intended to demonstrate Jonathan's acceptance of Yahweh's earlier negative judgment of him in chaps. 13–14 and his willingness to recognize David as Yahweh's new candidate to succeed Saul on the throne of Israel. He does this by formally binding

himself to David in a covenant and by passing his weapons to David, an act which is a gesture of political surrender (2 Sam 8:7, 11, 12; 2 Kgs 11:10).

Most of the remaining scenes in 1 Samuel in which Jonathan appears stress his covenant relationship with David and affirm his knowledge and acceptance of David's status as king-elect, while simultaneously revealing Saul's progressive acquiescence in Yahweh's choice. In 1 Sam 19:1–7 Saul becomes jealous of David's military success and esteem and orders Jonathan and his servants to kill David. It is stated in this context that "Jonathan delighted much in David." Because of their covenant Jonathan warns David to hide, argues on David's behalf before his father, and persuades him to remove his death sentence against David. He then restores David to the court.

After another attempt on his life by Saul, David goes to Jonathan and asks why Saul seeks his life (20:1–42). Jonathan agrees to help David in any way possible (v 4) and swears to apprise David of his father's intention, whether good or evil, saying "may Yahweh be with you as he has been with my father." In the revealing speech in vv 14–17, Jonathan asks David not to cut off his loyalty to Jonathan's house forever and not to let the name of Jonathan be cut off from the house of David in the future, when Yahweh will cut off all of David's enemies from the face of the earth. Jonathan has him swear to keep this promise "by his love for him," i.e., on the basis of their existing covenant relationship (v 17). When Saul learns that Jonathan has excused David from the New Moon feast, he curses him and orders him to send for David so that he can be killed, in order to enable Jonathan's kingdom to be established (vv 30–31). Jonathan questions why David should be put to death (v 32), thereby emphasizing his acceptance of David as the new king-elect of Israel, in contrast to Saul's refusal to accept the divine plan. The chapter ends with Jonathan's warning David of Saul's intention to kill him and with another reference to the covenant entered into by Jonathan and David and the oath sworn in the name of Yahweh to maintain peaceful relations between David's and Jonathan's descendants forever.

In the subsequent accounts of Saul's pursuit of David through the Wilderness of Judah, Saul's explicit knowledge of the covenant between Jonathan and David is revealed (22:7–8), after which Jonathan is reported to go to David while he is in hiding at Horesh in the Wilderness of Ziph to strengthen David's hand in God (23:17). The two then renew their covenant before Yahweh, after which Jonathan returns home (23:17–18). In this final scene between Jonathan and David, the narrator's message is completely revealed in Jonathan's direct confession that David, not he, will be the next king over Israel and that Saul also knows this fact. Jonathan's death at Gilboa is briefly reported in 31:2.

There is an allusion to the covenant between Jonathan and David toward the end of the lament over Saul and Jonathan, quoted from the Book of Jashar in 2 Sam 1:19–27. In v 26 David is quoted as saying, "I am distressed for you, my brother Jonathan; very pleasant have you been to me; your love to me was beautiful, surpassing the love of women." It should be noted that this is the only statement in the first person in the lament and that it is placed almost as a superscript and introduced by a statement that refers back to v 19. In addition, it is framed by parallel phrases in vv 25 and 27. Although David is said in v 17 to have written the lament personally, his authorship may be questioned and, along with it, the originality of v 26 (Edelman 1988). In view of the use of the covenant theme and the related verb *love* to describe the covenant relationship as a literary device to portray Jonathan's acceptance of David as the divinely chosen heir to Saul, the secondary introduction of the theme into the lament would be a logical way to give the theme an air of authenticity.

The theme of the covenant between Jonathan and David continues in 2 Samuel in connection with David's actions on behalf of Meribaal, Jonathan's young, crippled son. In 2 Sam 9:1 David is portrayed as asking, "Is there still anyone left of the house of Saul, that I may show him kindness for Jonathan's sake?" Upon learning from a former servant of the Saulide house of Meribaal's existence, David has him brought to the court and restores to him the Saulide family estates, "For I will show you kindness for the sake of your father Jonathan" (9:7). In a related incident David is said to have spared Meribaal from being one of the seven Saulides sacrificed by the Gibeonites to end a three-year famine, "Because of the oath of Yahweh that was between them, between David and Jonathan, the son of Saul" (21:7). It is generally recognized that historically, Meribaal's escape from sacrifice was almost certainly due to David's ignorance of his existence and that his subsequent discovery led to his becoming a mandatory member of the king's table, so that he could be constantly scrutinized by David's servants. See MERIB-BAAL.

A slightly different approach to the Jonathan narratives suggests that Jonathan should be understood to function on a literary level as a mediator between Saul and David and as a king-elect who abdicates his throne to David. This proposal is based on a structural analysis of 1 Samuel 13–31, in which it is discerned that narrative sections concerning Jonathan (18:1–5; 19:1–7; 20:1–21:1—Eng 20:1–42; 23:15b–18) have been artfully alternated with sections involving Saul and David (16:14–17:58; 18:6–30; 19:8–25; 21:2–23:15a [with other material]; 23:19 ff. [with much other material]). The resulting narrative is seen to be introduced by a preamble recounting Saul's rejection (chaps. 13–15) and a focal scene recounting David's anointing (16:1–13). According to this understanding of the narrative structure, the theme of the covenant between David and Jonathan functions literarily as a means of identifying the two, while Jonathan's conveyance of his royal armor and sword to David (18:1–5) is Jonathan's symbolic abdication as heir-elect in favor of David (Jobling 1976).

B. The Historical Jonathan

Very little is known about Jonathan after one removes the literary patterning outlined above and seeks for information about his career. Both 1 Sam 14:49 and 1 Chr 8:33; 9:39 name him as the eldest son of Saul, a relationship which would have made him the heir to the Saulide throne. He died alongside his father and two of his younger brothers, Abinadab and Malchishua, at Mt. Gilboa, during the unsuccessful Israelite campaign against Beth-shan. At the time of his death, he had a young son, Meribaal, who was probably an infant or toddler. This

suggests that he was perhaps 30 or 31 years old when he died, assuming that comparative figures for marriage ages for males in the ANE, 27 through 31, were applicable to ancient Israel and to royalty (Roth 1987). No figures are given in the Bible.

It is unlikely that Jonathan fought at the battle of the Michmash pass, as currently portrayed in 1 Samuel 13–14. If one presumes that the corrupted regnal figure for Saul in 1 Sam 13:1 was 22 years old, Jonathan would probably have only been an 8–10-year-old child at the time of the battle; and the legal age for military service was 20 (Num 26:2, 4). The location of the two Philistine outposts in E Benjamin and Mt. Ephraim on opposite sides of the Wâdī Suweinit would have required their elimination during the early years of Saul's reign, so that he could secure his E flank and prevent periodic Philistine incursion through his territory to man the garrisons. In addition, his victory would have given him control over the E half of one of the main E-W routes from the Philistine plain to the Jordan valley. It appears that the biblical narrator has used a Saulide-era battle as the backdrop for his theological portrayal of Jonathan's rejection as king-elect in favor of David; but, perhaps unknowingly, he has chosen one that Jonathan could not possibly have participated in.

The historicity of the covenant between David and Jonathan is difficult to judge but probably also has been developed by the biblical narrator in order to convey his message. While Jonathan may have been good friends with David while he was at the Saulide court, subsequent historical developments weigh against their having entered into a covenant in which Jonathan would have recognized the divine choice of David as Saul's successor to the Israelite throne. After Saul and Jonathan both died at Gilboa, Saul's youngest son, Eshbaal, acceded to the throne, indicating the acceptance of the principle of dynastic succession from the founding of the Israelite monarchy. It was only in the wake of Eshbaal's murder, which David may have arranged (see ESHBAAL), that David gained the Saulide throne in place of another inexperienced Saulide, possibly claiming to be a legitimate candidate on the basis of optative affiliation, because of his marriage to Saul's daughter Merab (Tsevat 1958). The theme of the covenant and "love" between David and Jonathan seems to ignore the actual course of history, a disregard which suggests in turn its literary origin.

DIANA V. EDELMAN

JOPPA (PLACE) [Heb *yāpô*]. A town on the coast of the Mediterranean Sea mentioned in connection with the original tribal territory of Dan (Josh 19:46). When Solomon built the Jerusalem temple—and again when the temple was rebuilt in the postexilic period—timbers from Lebanon were shipped to Joppa, where they were unloaded and carried overland to Jerusalem (2 Chr 2:15—Eng 2:16; Ezra 3:7). It was in Joppa that Jonah hired a ship to carry him to Tarshish "away from the presence of the Lord" (1:3). In the NT Joppa is mentioned in connection with Peter's missionary activity (Acts 9:36ff.).

A. Identification and History

Biblical Joppa can be securely identified with modern Jaffa (M.R. 126162), a city situated on the top of a high hill just S of Tel Aviv. Since antiquity the city has been a way station for conquerors traveling from Egypt northward or from the N countries southward. It was also the first stop for pilgrims on their way to Jerusalem. It is not surprising therefore that Joppa is frequently mentioned in the Bible and in numerous ancient records.

The name Joppa is derived from the Phoenician word meaning "the beautiful"; in Greek the town was called *Ioppe* and in Arabic *Yâfâ el-ʿAtiqa*, "ancient Jaffa." The earliest mention of Joppa is in connection with its capture by Thutmose III in the 15th century B.C. (*ANET,* 242). It is mentioned again in the Harris papyrus, which is a folktale describing the capture of Joppa by a strategy reminiscent of the story of Ali Baba and the 40 thieves and the legend of the Trojan horse (*ANET,* 22–23). Joppa is mentioned subsequently in two of the Amarna Letters, which inform us that in the 14th century the city was an Egyptian stronghold containing royal granaries. In papyrus Anastasi I, a satiric letter apparently of the 13th century, an Egyptian royal official gives an account of his experience in Joppa (*ANET* 475ff., esp. 478). The name of Joppa is inscribed on the "prism stele" of King Sennacherib of Assyria, found in his palace at Nineveh; it relates that on his way to fight King Hezekiah of Judah he took Joppa and a number of towns in its vicinity, an event which occurred about 700 B.C. (*ANET,* 287).

The inscription of Eshmunezer, king of Sidon (dated probably to the 6th century B.C.), relates that as an expression of gratitude from the "Lord of Kings" (king of Persia), he received two harbor towns on the Palestinian coast, Joppa and Dor (*ANET,* 662). The Sidonian occupation of Joppa in the Persian period is also known from the description of the coastal towns of Syria and Palestine attributed to the Greek voyager Scylax. In the Hellenistic period Joppa was colonized by Greeks. The papyri of Zenon, an Egyptian treasury official who visited the country in 259/258 B.C. during the reign of Ptolemy II, shed some light on the history of the city in his time. In the Hasmonean period the city was captured from the Seleucids and became the port of Judea. During the war with the Romans,

it was destroyed first by Cestius Gallus and then by Vespasian but was quickly rebuilt. From this period onward Joppa is frequently mentioned by Greek and Roman historians.

B. Excavations

From 1948 to 1950 P. L. O. Guy carried out the first exploratory excavations in Joppa. In 1952 Guy's excavations were continued down to virgin soil (Bowman, Isserlin, and Row 1955). The excavators established that the earliest remains at that spot were sherds dating from the 5th century B.C. and that the site was uninhabited prior to that date. They also discovered a structure from the 4th or 3d century B.C. of which only the floor of one of the rooms was preserved. The walls of the building were repaired in the 2d century B.C., and in the following century the level of the floor was raised. During the Byzantine period the area was settled anew.

In 1955 J. Kaplan undertook a systematic excavation of ancient Joppa. By 1964 three areas (A, B, C) in different sections of the mound had been excavated during six seasons of excavations. Limited soundings were also carried out in the clock square of Joppa, in which was discovered part of the cemetery of the gentile population of Joppa, dated to the Late Hellenistic and Roman periods.

1. Area A. Seven occupation levels, the latest dating from the 1st century B.C., were excavated here; and the following stratification was established.

Level I, just beneath the surface, was dated to the Hellenistic period. This level is divided into two sublevels, I-A and I-B. Level I-A contained a section of a wall of dressed stone, 2.2 m wide, with a casemate construction adjoining it. They date from the 1st century B.C., i.e., from the Hasmonean period. In level I-B the corner of a square fortress, also built of dressed stone, was uncovered, with a wall 2.5 m wide. The fortress was dated to the 3d century B.C. To this level was also assigned a group of five round, stone floors, 0.8–1.2 m in diameter, each with a small, stone basin. These floors were found in the S section of the excavation and had no connection with the walls. Level II here was dated to the Persian period. A section of a dressed stone wall, 2.5 m wide, and some adjacent structures were cleared. The wall dates from the second half of the 5th century B.C. and was apparently built by the Sidonians.

Level III, dating to the Iron Age, was also divided into two sublevels. Remains of sublevel III-A, preserved at the E edge of the excavation, contained a rough stone wall, approximately 0.8 m thick, adjoining a stone floor sloping eastward. These structures were assigned to the 8th century B.C. Level III-B, found at the W edge of the excavation, contained a section of a courtyard with a floor of beaten earth and an ash pit nearby, with Philistine sherds of the 11th century B.C.

Likewise, level IV (LB IIB) also consists of two sublevels. Sublevel IV-A contained the threshold of the citadel gate and two entrance walls, 18 m long and 4 m apart, built of gray mud bricks. The walls run in an E-W direction from the gate into the citadel. The passageway between the walls was paved with stone and pebbles. The walls and gate were destroyed by fire, apparently late in the 13th century B.C. The bronze hinge of the gate was discovered in situ near the bottom of the left jamb. Beneath these structures were the remains of sublevel IV-B, which included the lower part of an earlier gate, fallen stone doorjambs, and two entrance walls, all of which followed the same line as the structures of sublevel IV-A. It is clear that sublevel IV-A had been built on the ruins of a previous occupation level, IV-B, which had also been burned, apparently earlier in the 13th century (in the published interim reports, sublevel IV-B appears as level V). Inscribed upon four of the stone jambs were the five titles of Rameses II and part of his name, and it appears that the inscriptions were originally set symmetrically on both sides of the gateway. The gate and the entrance walls dating from the time of Rameses had been dug deep into the E part of the ruined citadel of Joppa. As a result, remains from the 18th to 14th centuries B.C. situated to the N and S of the entrance walls lay at a higher level than the threshold of Rameses' gate. These strata were only partially cleared.

In level V (LB IIA) some building remains were found, as well as a small silo built of rough stones set between the S entrance wall of Rameses' gate and parts of the structures of level VI S of it. Quantities of potsherds of the 14th century B.C. were found in the silo and its vicinity.

Level VI (LB I) contained some remains of mud-brick buildings on stone foundations. North of the N entrance wall a locus of pottery vessels was uncovered, including bichrome and gray-burnished ware. South of the entrance wall was a heap of sherds probably thrown there when the inhabitants had cleared an adjacent area. These broken vessels are of Cypriot origin and include base ring and monochrome type wares. Level VI is dated from the second half of the 16th century to the second half of the 15th century B.C.

The lowest level excavated (VII) was dated to the MB III period. Sections of two brick walls were found at the N and S edges of the excavated area. It seems that subsequently occupation levels VI–IV were concentrated in the space between these two walls. The outer face of the N wall did not adjoin any visible glacis, while the S wall was set on a rampart of beaten earth and kurkar. This rampart belongs to an earlier, unexcavated layer, probably level VIII. Level VII is tentatively dated to the period between the second half of the 17th century and the first half of the 16th century B.C.

The excavations in area A were resumed in 1970, and the area was extended on the S and W sides. Here, too, as in the excavations in the 1950s, settlement strata of the Early Arabic, Byzantine, and Roman periods were missing. Some scattered remains attest the destruction and damage caused to these strata in the past century. The same is true for the remains from the late Second Temple and Hasmonean periods found in Joppa. In these new excavations in area A, once again reasonably well-preserved strata begin in the early part of the Hellenistic period (level I). The remains consisted mainly of sections of walls built of brick-shaped ashlar blocks set on their narrow end. These walls were often constructed on top of the Persian period walls. A fieldstone altar (2.4 × 2.4 m) was uncovered in square L-4, standing in a room the measurements of which were only 3.9 × 5.3 m. This type of cult hall is also known from the same period in Cyprus.

Persian period remains (level II) covered almost the

entire excavated area, dating from the second half of the 5th century to the Macedonian conquest, i.e., to the period in which the Sidonians held Joppa. Several building stages of that period were discovered, notably sections of walls of a large store building for keeping imported goods and Attic vessels, extending from E to W across the entire area. In its W part were found fragments of mud-brick floor and the entrance was paved with large stones. The walls were built of regularly spaced ashlar pilasters with a fill of fieldstones between them, and several coins of Straton I were found among the stones. In the excavations in the 1950s, great heaps of blacksmith's waste had been discovered in various places apparently above the Persian stratum; this waste was also found in the subsequent excavations, along with part of a forge. Two coins of Alexander the Great were found in one heap of the waste. The floor of the forge, black from the soot mixed into it, was cleared near W.800 of the store building; a container was set against the wall, an iron sickle lay on its bottom, and a knife lay nearby. It was apparently the remains of a furnace for heating the metal to be worked. All evidence suggests that this iron smithy was in use when the large store building was already in ruins. In square K-3, an early Persian stratum, the foundations of a pre-5th-century building were discovered under the ashlar walls. This stratum was designated stratum II-B, and that of the ashlar structures stratum II-A.

In the new excavations in level III, the Israelite period (Iron Age II) contained no building remains, only layers of earth mixed with ashes. At the bottom of this stratum were found two cattle burials dug into the Iron I stratum, with stone markers nearby. The burial of the cattle whole clearly points to some religious ritual; and indeed, it appears that this had been a sacred site hundreds of years earlier (see below). A different picture emerged under the ashlar blocks of the Persian stratum in squares I_2–I_3. Here an Iron II stratum was found, and underneath it was an Iron I stratum. In depressions and pits belonging to this last level was found Philistine pottery of the 11th century B.C. The pits and depressions were partly dug into a layer of rubble and clay bricks fallen from a nearby structure.

Under these strata were cleared the foundations of a long hall. A citadel with mud-brick walls was attached to it on the S side. The hall measured 4.4 m × 5.8 m and was entered from the N. The floor was covered with a coat of white plaster and on it were two round, stone bases of wooden columns which had supported the beams of the roof. The pottery finds were meager; however, the skull of a lion, with half of a scarab seal near its teeth, was found on the floor, suggesting that the building was a temple where a lion cult was practiced. Despite the paucity of the pottery finds, the building could be dated from the end of the 13th century to the beginning of the 12th century B.C. The N temple at Beth-shean from the time of Rameses III, which is identical in plan with this Joppa structure, also supports this date. The inscription on the half scarab found near the lion's teeth contained the name of Queen Tiy, wife of Amenhotep III; but it should be remembered that scarabs of kings of the 18th and 19th Dynasties continued to be used as talismans or jewelry for generations afterward (therefore they cannot serve as conclusive evidence for dating remains).

2. Area B. Excavations in this area were concentrated in the premises of the Ḥammam building adjoining the Jaffa Museum and on the slope to the W of it. In the Ḥammam a sandwich-built glacis sloping from W to E was uncovered. The external revetment was made of thin stone slabs which rested on layers of sandy soil. Beneath them were courses of mud bricks laid in a layer of gray soil. The potsherds unearthed in this layer indicated that the glacis is not later than the 8th century B.C., making it contemporary with level III-A in area A.

Beneath the brick and gray layer, the excavation revealed a thick layer of kurkar, indicating that there must have been an earlier glacis here. Indeed, layers of beaten earth and kurkar were found also on the slope of the Ḥammam, situated at a lower level than the 8th century glacis and resting on the E slope of a rampart of beaten earth. This rampart dates to the 18th century B.C., i.e., to the beginning of the Hyksos period. It probably enclosed Joppa in a square area.

3. Area C. The excavation of this area revealed six occupation levels and a catacomb built of dressed stone. The levels of this area are later than those excavated in area A and in effect represent a continuity of them.

The first (upper) level contained a rough mosaic floor from the 6th–7th centuries A.D. The second level had structures from the 5th century A.D., situated immediately beneath the mosaic floor. In the third level was found a section of a large 4th-century A.D. building built on thick rubble foundations and containing a floor made of large stone slabs. The fourth level, dating from the 3d century A.D., contained a section of foundations lying under the stone floor slabs of the large building of the previous occupation level. That previous building was a two-room structure in the fifth level (dating to the beginning of the 2d century); its foundations were sunk deep into the earlier levels. In this level were found pottery, a stone bowl, a bronze jug, and a hoard of bronze and silver coins, all not later than the reign of Trajan. The sixth level contained a section of a private dwelling from the 1st century A.D. with a courtyard and cistern. A doorway, approximately 2 m high, of which two jambs had survived, was situated in the wall facing the courtyard. Numerous pottery vessels and lamps were found on the floor of the courtyard. Behind the E wall of the fifth occupation level was uncovered part of the courtyard of a burial cave of extremely fine construction—with ashlar blocks laid as headers and stretchers. The catacomb consisted of three chambers. The first was damaged by the collapse of the ceiling, and its entrance was blocked with ashlar stones, and the ceiling of the second chamber was also destroyed. The third, the front chamber, had been reconstructed after the collapse of its ceiling; it was fitted with a new roof supported by arches of ashlar stone. These supported stone slabs that formed the floor of a private dwelling erected above the chamber.

Among the artifacts found in area C were two Greek inscriptions. One of them, engraved on limestone, reports (in three identical versions) that during the reign of Trajan a man named Judah was the *agoranomos* of Joppa. The second is a fragment of a votive inscription from the 3d century B.C. which mentions Ptolemy IV Philopator. Many jar handles with Greek and Latin stamps were also found,

as well as a tile fragment with the stamp of the Tenth Legion and a pyramidal seal engraved with the name "Ariston."

4. Area Y. Area Y, located near St. Peter's Church at the intersection of Mifratz Shlomo Street and the Ring road, was first excavated in August 1964 and again in May 1968. Some remains were found beneath the square in front of the church. The site is located W of the W glacis of the Joppa citadel. The area was not inhabited prior to the Persian period, and its finds consisted mainly of tombs and various installations (see above, the results of the excavation carried out nearby by the Leeds Expedition). Two strata of settlement—a Hellenistic and a Persian—were uncovered in area Y; beneath the latter was virgin clay soil containing tombs and other MB installations.

Hellenistic remains were found immediately below the ruins of modern buildings. In the S part of the area, a section of an ashlar structure was uncovered with walls preserved to a height of 1 m. The N part of the area contained the corner of a large building, also built of ashlar, in which were several square rooms side by side. This building may have been part of the Joppa agora. The Persian period is represented only by layers of ashes. There were no building remains, although many fragments of Attic pottery were found. An infant burial in a jar, dating from the 17th century B.C., was discovered in the virgin soil. In addition to the remains of the body, it contained a red-burnished juglet, and outside near the burial was a scarab seal of the Hyksos type. In the N part of the site, two furnaces dug into the loam were discovered. One furnace was almost intact, except for its vaulted roof. It was constructed over a MB tomb containing funerary offerings and a scarab seal. A bed of ashes and pits dug into the loam in the E part of the area were found filled with ashes and animal bones. These remains date from LB I. In one of the pits were found full-length bones of domestic animals preserved from the upper end to the hoof. These finds suggest that a cult place was located close by.

JACOB KAPLAN
HAYA RITTER KAPLAN

JORAH (PERSON) [Heb *yôrâ*]. Var. HARIPH. Head of a family of Babylonian exiles who are listed as returnees under the leadership of Zerubbabel and others (Ezra 2:18). In the parallel lists (Neh 7:24 = 1 Esdr 5:16) the name is Hariph. Since Jorah carries the meaning of "autumn rain" and Hariph also refers to "autumn," these are apparently two forms of the same family name. The leader of this clan affixed the family name Hariph to the covenant document of Nehemiah in Neh 10:20—Eng 10:19. The absence of Sheshbazzar's name from the list of Ezra 2 raises questions about its connection with the preceding chapter and about the relationship between Sheshbazzar and Zerubbabel. For discussion of this problem, see AKKUB.

Many do not regard the list and covenant of Nehemiah 10 as belonging originally in this context. Williamson (*Ezra, Nehemiah* WBC, 325–30) surveys various views about the origins of this list. He concludes that it was compiled from other lists in Ezra and Nehemiah in order to be attached to the terms of an agreement drawn up by Nehemiah following his reforms of Nehemiah 13. This document was then kept in the temple archives until being inserted into its present position. (See also Clines *Ezra, Nehemiah, Esther* NCBC, 199–200; Myers *Ezra-Nehemiah* AB, 174–75; Jepsen 1954: 87–106.)

CHANEY R. BERGDALL

JORAI (PERSON) [Heb *yôray*]. A Gadite who was a son of Abihail and one of seven kinsmen who are named alongside four (or three; see SHAPHAT) tribal leaders (1 Chr 5:13). "Jorai" is possibly the abbreviated form of a longer name that meant "Yahu has seen." Jorai and his kinsmen lived opposite the Reubenites in "Bashan as far as Salecah" and "in Gilead, in Bashan . . . and in all the pasture lands of Sharon to their limits" (1 Chr 5:11, 17). Neither Jorai nor the others named in the Chronicler's genealogy for Gad (1 Chr 5:11–17) appear in other lists of Gadites (Gen 46:16; Num 26:15–18; 1 Chr 12:9–16—Eng 12:8–15). See also JACAN.

M. PATRICK GRAHAM

JORAM (PERSON) [Heb *yôrām*]. Var. JEHORAM. **1.** King of Judah, son and successor of Jehoshaphat. The years of his reign are variously reckoned as (852) 847–845 B.C.E. (Begrich 1929; and Jepsen 1979), (853) 848–841 B.C.E. (Thiele 1965), or 850–843 B.C.E. (Andersen 1969).

Information concerning the reign of Joram is found in 1 Kgs 22:51—Eng 22:50; 2 Kgs 8:16–24; 2 Chronicles 21. In addition, his name appears in synchronistic dating lists and truncated genealogies in 2 Kgs 1:17; 8:25; 8:29 (= 2 Chr 22:6); 2 Kgs 11:2 (= 2 Chr 22:11); 2 Kgs 12:19—Eng 12:18; 1 Chr 3:11; 2 Chr 22:1. The reports concerning Joram in the books of Kings rest to a large extent upon traditional material that goes back to the annals of the Judean kings and that was taken over by the Deuteronomistic redactors when they composed these books. In contrast to the brief survey of the reign of Joram given by the Deuteronomistic redactors (2 Kgs 8:16–24), the Chronicler devoted a whole chapter to Joram (2 Chronicles 21).

The chronological statements concerning the time when Joram ascended to the throne are contradictory. According to 2 Kgs 8:16 he began to rule in the fifth year of Joram of Israel. Conversely, 2 Kgs 1:17 says that the

Israelite Joram became king in the second year of the reign of Joram of Judah. The discrepancy between these two statements is obvious. This discrepancy is the likely reason why the statement in 2 Kgs 1:17 was simply left out of the LXX translation. The discrepancy can be explained by assuming that Joram took over a regency for his father, Jehoshaphat, while the latter was still alive. For reasons unknown to us (illness? cf. 1 Kgs 15:23; 2 Kgs 15:5), Jehoshaphat transferred the affairs of government to his son Joram in 852 B.C.E. (following Jepsen). The synchronism in 1 Kgs 1:17 must then refer to the time when Joram's regency began. Following the death of his father, Jehoshaphat, in 847 B.C.E. (again following Jepsen), Joram then reigned as sole monarch. It is this latter date which is in mind in 1 Kgs 22:51—Eng 22:50 and 2 Kgs 8:16. The *wîhôšāpāṭ melek yĕhûdāh* of 8:16 ("and Jehoshaphat, king of Judah"—often understood to mean "Jehoshaphat was yet king of Judah") goes back to a scribal error and is to be expunged; it allows the false impression that the numerical statements in the verse refer to a time when Jehoshaphat was still alive. According to 2 Kgs 8:17 Joram was 32 years old when he began his reign, and he reigned for eight years. These statements should rather be taken as referring to the total length of time that Joram exercised ruling powers, beginning from the start of his regency. He ruled as sole monarch for hardly more than two years.

Both as regent and as king Joram most likely continued the policy of alliance with the Omride royal house of the N kingdom, a policy which his father, Jehoshaphat, had already pursued successfully. In the year 867 B.C.E. (following the chronology of Jepsen), while he was still the crown prince, Joram had married the Omride princess Athaliah. This had been a diplomatic marriage, a security for the policies of peace and cooperation that had recently arisen in the wake of the rapprochement between the two neighboring states that had gone through a protracted period of hostile relations following the breakup of the United Kingdom (926 B.C.E.). Athaliah was not actually a daughter of Ahab, as 2 Kgs 8:18 (which does not identify her by name) indicates; rather, following the Hebrew text of 2 Kgs 8:26, she was a daughter of Omri (*bat-ʿomrî*) and a sister of Ahab.

Historical information relating to the time of Joram's reign is scanty. According to 2 Kgs 8:20–22 the Edomites shook off Judean overlordship at this time and gained their independence. This tidbit of information agrees with what is said back in 1 Kgs 22:48–49—Eng 22:47–48, where it is presupposed that the territory of Edom was being administered by a Judean governor. However, the reference to the Edomite revolt pays no attention to 2 Kgs 3:4–27, with its mention of an Edomite king whose existence at this time is in any case a matter of dispute.

According to 2 Kgs 8:21–22 Joram led a campaign against the rebellious Edomites but, despite a victory in the field, could not subdue the rebellion. The biblical text here creates a very confused picture; one suspects that, in reality, Judah experienced a defeat at the hands of the Edomites. This rebellion marked the effective end of Judean hegemony over Edom; further attempts to subdue this neighboring folk to the S (cf. 2 Kgs 14:7) were unsuccessful.

Finally, during the reign of Joram the city of Libnah (Tell Bornat, in the W hill country) also declared its independence. The political background to this event remains unclear, and whatever effect it had seems to have been only temporary.

The Deuteronomistic redactors of the books of Kings, in their theological estimation of Joram, reproach him for religious misbehavior, although they do not more precisely specify the nature of that misbehavior. In the opinion of the Deuteronomists, it was Joram's marriage to Athaliah that was ultimately responsible for his errant religious behavior; for she led Joram along the "way of the house of Ahab" (2 Kgs 8:18). This remark insinuates that Joram had an inclination toward veneration of Baal. It remains questionable, however, whether this remark also indicates that the king took steps in the direction of official toleration of cultic activities in honor of that Canaanite deity.

The Chronicler, building on the Deuteronomistic representation of the history of Joram, constructs out of the reports in the books of Kings and various other sources a depiction of Joram which is still more condemnatory (2 Chronicles 21). Along with the core tradition concerning Joram in the books of Kings (2 Chr 21:1 = 1 Kgs 22:51—Eng 22:50; 2 Chr 21:5–10 = 2 Kgs 8:17–22), the Chronicler also takes over the Deuteronomistic judgment concerning him (2 Chr 21:6 = 2 Kgs 8:18). Indeed, the Chronicler sharpens that judgment through the added accusation that Joram fostered the cult of the high places and led his subjects astray into the practice of idolatry (2 Chr 21:11). In his material which is not found in the Deuteronomistic History the Chronicler ascribes to Joram a terrible and bloody crime: he had his brothers, whom their father, Jehoshaphat, had provided with riches and had endowed with fortified cities, slain without exception (2 Chr 21:2–4). Beyond that the Chronicler cites from a legendary letter of the prophet Elijah (a letter which the prophet could only have dictated proleptically before his death) in which divine punishment is proclaimed upon Joram for his crimes against both humanity and Yahweh—a punishment which is to befall not only Joram himself but also his children, his wives, and his possessions (2 Chr 21:12–15). The carrying out of the predicted punishment is then reported without delay. Bands of Philistines and Arabs fall upon Judah and carry off not only the treasures of the royal palace, but also the wives of the king and all of his sons except for the youngest, Ahaziah (2 Chr 21:16–17; note the text-critical apparatus in *BHS* on MT's *yĕhôʾāhāz* in v 17b; in 22:1 it is reported that the sons were slain by the band of raiders). Joram himself died in agony of an illness of the bowels. The populace refused to mark his passing with the appropriate funerary ceremonies and denied him burial in the tombs of the kings (2 Chr 21:18–20). The whole of 1 Chronicles 21 is thus stamped by the pattern: guilt–prophetic pronouncement of judgment–fulfillment of prophetic pronouncement. Even though the Chronicler might have reached back to previously existent traditions in his own material, still these traditions exhibit characteristics suggesting a relatively late time of origin. They contribute hardly anything to the reconstruction of the historical Joram, but they do show how the theologically negative picture of him was sharpened with the passage of time.

Joram is also mentioned in the NT. Since the family tree

of Jesus as given by Matthew includes the kings of the Davidic lineage among the forebears of Jesus, Joram occupies a place in that genealogical succession (Matt 1:8).

2. King of Israel, son of Ahab, the successor to his brother Ahaziah. The determinations of the years of his reign show only modest differences: 851–845 B.C.E. (Begrich 1929; and Jepsen 1979), 852–841 B.C.E. (Thiele 1965), and 853–842 B.C.E. (Andersen 1969).

The block of material from 2 Kgs 1:17 to 9:26 is assigned to the time of Joram. In addition, Joram is mentioned again in 2 Kgs 9:29 and is referred to in 2 Chr 22:5–7. In actuality, however, the textual material relating to Joram is considerably less than all this: 2 Kgs 8:16–24 concerns the roughly contemporary Judean king Joram; 2 Kings 2, 2 Kings 4, 2 Kgs 6:1–7, and 2 Kgs 8:7–15 are exclusively traditions about prophets, although they do demonstrate that the prophetic groups which gathered about Elisha belong to the time of Joram's reign. Moreover, even the texts which speak of the battles with the Syrians (2 Kgs 6:8–7:20) or presuppose some sort of subjection to the Aramean state of Damascus (2 Kings 5) hardly stem from the time of Joram's rule. These narratives nowhere mention the name of Joram; they speak only of the "king of Israel." It is possible that these anonymous traditions, which came out of the circles of the prophetic groups, have been arranged in a chronologically inappropriate place. Their historical statements fit in much better with the constellation of political realities at the time of the Jehu dynasty, especially under the kings Jehoahaz and Joash.

Finally, the historical background to the narrative in 2 Kgs 3:5–27 is also not immune to questioning. This narrative reports on a campaign which Joram carried out against the Moabites in conjunction with Jehoshaphat of Judah and with the king of Edom. At the very least the reference to a king of Edom, who is not here named, is an anachronism at the time of Joram and Jehoshaphat (cf. 1 Kgs 22:48–49—Eng 22:47–48—along with 2 Kgs 8:20–22). It is not impossible that the text of 2 Kgs 3:5–27 was originally transmitted without the name of the king to whom it historically belonged and was transmitted anonymously for a time. If this is so, then it is quite possible that it applies to some other historical situation, namely, to one during the era of the Jehu dynasty. To be sure, the probability of such dislocation is not so strong for the text at hand as it is for the traditions transmitted by 2 Kgs 6:8–7:20. In any case the material relating to the end of Joram in 2 Kgs 8:28–9:26 is historically reliable.

Joram ascended the throne after the brief reign of his brother Ahaziah, who died as the result of an accident and did not leave behind a son (2 Kgs 1:2, 17). Joram undoubtedly held fast to an external policy of peaceful alliances with the neighboring states and a domestic policy of equal treatment of both the Canaanite and the Israelite elements of the population. Such policies had been inaugurated already in the time of Omri, had been practiced in exemplary fashion by Ahab, and had certainly been continued by Ahaziah. The statement, which apparently goes back to the annals of the Israelite kings, to the effect that Joram removed the cultic pillar of Baal that his father, Ahab, had set up (2 Kgs 3:2), could indicate that in his religious policy Joram struck some sort of compromise with the Yahwistic circles that had taken up a position of opposition to the Omride ruling house. However, it would be difficult to see in this gesture any fundamental altering of the principle of equal treatment in matters pertaining to religion, since the Baal temple in Samaria continued to stand and was only done away with by Jehu (2 Kgs 10:25–27). A traditio-historical perspective upon the Elijah traditions even gives the impression that the influence of Jezebel upon the administering of governmental affairs considerably increased after the death of Ahab during the reigns of Ahaziah and Joram. After the accession of Ahaziah to the throne, Jezebel entered upon the rank of "queen mother" (*gĕbîrâ*, 2 Kgs 10:13), a position which granted her considerable opportunities for influencing policies dealing with domestic and religious matters. Possibly Jezebel used the dignity of her office as "queen mother" to counteract the inclinations of Joram in the direction of an easing of tensions with the Yahwistic factions; she may well have been active in promoting Canaanite ways in socio-cultural and religious matters, in furthering syncretistic practices and the veneration of Baal, and in generally suppressing the influence of genuinely Israelite traditions. However, her efforts actually led to a heightening of tensions within the populace. Finally, in the revolution of Jehu, these tensions exploded and cost Joram and Jezebel their lives.

In his foreign policy Joram nurtured a good relationship with the small neighboring state of Judah and its kings Jehoshaphat, Joram, and Ahaziah. Athaliah, the sister of Joram's father (2 Kgs 8:26), had married into the Judean royal house and, from her base in Jerusalem, certainly served as a guarantee of friendly relations. Further evidence of these friendly relations is the visit of Ahaziah of Judah to the wounded Joram in Jezreel (2 Kgs 8:29; 9:16, 21–29) and the sojourn in the N kingdom of members of the Davidic ruling house at the same time (2 Kgs 10:12–14). Although it is not expressly so stated, one can reliably assume that the treaty-based relationship with the Phoenicians, which had been set up earlier by Omri through the marriage of Ahab and Jezebel, also was maintained under Joram.

On the basis of the historical circumstances at the time, it does not seem at all improbable that Joram militarily confronted the growing Moabite threat upon the Israelite settlement region in the vicinity N of Seil Heidan. On his victory stele the Moabite king Mesha reports having enjoyed considerable successes in Israelite territory (*ANET*, 320–21), such that the settlements of the tribe of Gad were severely oppressed. So it is not difficult to imagine that Joram reacted to the expansion by the Moabites with a military campaign (2 Kgs 3:4–27), one which he carried out in alliance with Jehoshaphat—but not with a king of Edom, since at the time none such yet existed. (The references to a king of Edom in vv 9, 12, and 26 are to be regarded as secondary additions to the text.) If there was such a campaign, it finally terminated without definitive success for Israel. While such a campaign is historically probable in itself, it is not easy to explain why the allies attacked Moab from the S, across Judean and Edomite territory, instead of going by way of the Israelite settlements in the N part of the Moabite sphere of influence. The fact that the stele of the Moabite king Mesha—erected

only some time later—makes no mention of this campaign also complicates matters.

Because of the lack of any clear information in the sources, it is difficult to evaluate the relationship of Joram to the Arameans and the Assyrians. Under the impact of the increasing Assyrian drive toward expansion, Joram's father, Ahab, had set aside the latent animosities with the Aramean state of Damascus and had, in alliance with Hadadezer of Damascus and Irḫuleni of Hamath, put an end to the advance into Syria of the Assyrian king Shalmaneser III at the Battle of Qarqar (853 B.C.E.). Three other campaigns which Shalmaneser III led into Syria fell during the reign of Joram, namely, the campaigns in the 10th, 11th, and 14th years of Shalmaneser's reign (849, 848, and 845 B.C.E.).

On each of these occasions, Shalmaneser was confronted by a coalition of Syrian and Palestinian states under the leadership of Hadadezer of Damascus. Even though the Assyrian inscriptions claim that this coalition suffered defeat every time, nonetheless the Assyrian army was each time compelled to turn back. In other words the alliance functioned for as long as Hadadezer was alive; and he did indeed succeed in repulsing the Assyrian invasion into Syria—though certainly at a heavy cost. The Assyrian sources (*ANET,* 279–80) never mention the name of Joram of Israel, nor do they in any other fashion clearly confirm the participation of Israelite contingents in the battles. This silence in the Assyrian sources gives the impression that Joram had backed out of the anti-Assyrian coalition. Such a conclusion is not to be ruled out. Given the way in which the Assyrian inscriptions are worded, however, this conclusion is also not probable. Already in the texts which refer to the first campaign of Shalmaneser III and the Battle of Qarqar, Ahab of Israel is explicitly mentioned only in a single version, the so-called Monolith inscription (col. ii, lines 90–102; *ANET,* 278–79). In the other copies of this annalistic text, the name of Ahab does not appear (*ANET,* 279; cf. Timm 1982: 185–89). One can therefore assume that reference to the participation of Israel is included in the summarizing phrases to be found in the increasingly stereotyped reports concerning the later campaigns of Shalmaneser. If that is so, then Joram did hold fast to the policy of alliance with Aram-Damascus, Aram-Hamath, and the other small Syro-Palestinian states and did indeed contribute to the resistance against the Assyrian advance. Under these circumstances it is very unlikely that he would have gotten involved in a battle with the Arameans of Damascus, a battle of such proportions that the very existence of Israel was threatened, as is presupposed in 2 Kgs 6:8–7:20.

The end of the anti-Assyrian coalition and therewith also of the alliance between Israel and Aram came about through a change of ruling power in Damascus. Hadadezer, the king who had been at the head of the alliance, died. The accession of Hazael to the throne led to the collapse of the united front that had up to this point protected both Syria and Palestine from Assyrian hegemony. The old animosities between the former allies apparently resurfaced. According to 2 Kgs 8:28–29 and 9:14–15 Joram led the Israelite army to the defense of the Transjordanian border town of Ramoth-gilead, which was being attacked by the Arameans under Hazael. Joram was wounded in this conflict and returned to Jezreel to recuperate. During his absence the field commander Jehu was anointed as monarch in Ramoth-gilead by a disciple of the prophet Elisha and then proclaimed as king by the officers (2 Kgs 9:1–14). Before news of all of this could spread, Jehu hastened back to Jezreel and there killed the unsuspecting king Joram, who had actually gone out to meet Jehu (2 Kgs 9:15–24). The site of the bloody deed is identified as the piece of property which had belonged to Naboth of Jezreel (2 Kgs 9:25–26), whom Ahab had had killed. Thus the death of Joram appears as the fulfillment of a divine oracle which had once proclaimed retribution for Ahab on precisely this spot, even though it is upon Joram that the retribution actually falls. After he had dispatched the king, Jehu also had the queen mother, Jezebel, thrown out of a window of the palace (2 Kgs 9:30–37). Then, following the traditional practice of usurpers (cf. 1 Kgs 15:29; 16:11), he had the remaining members of the "house of Ahab" slain (2 Kgs 10:1–11, 17). This slaughter not only put an end to the Omride dynasty, which had ruled in Israel for more than three decades (882–845 B.C.E., following the chronology of Jepsen); but it also obliterated the whole royal line that stemmed from Omri. Jehu established a new dynasty, one which was to rule over Israel for nearly a century.

In their introduction (2 Kgs 3:2–3) the Deuteronomistic redactors give Joram the same negative evaluation that they give to the other kings of the N kingdom, although they ameliorate it somewhat in comparison to their evaluation of Joram's parents, Ahab and Jezebel—this because Joram had removed the cultic pillar of Baal. In the work of the Chronicler, which mentions the kings of N Israel only tangentially, Joram appears in conjunction with Ahaziah of Judah. The Chronicler's material consists of an excerpt from 2 Kings 8 (2 Chr 22:5–6 = 2 Kgs 8:28–29) and of a summary of an episode from 2 Kings 9 to which the Chronicler has added theological commentary (2 Chr 22:7 = 2 Kgs 9:21–23). The broader context (2 Chr 22:4–9) clarifies the Chronicler's intention, which is to show that Ahaziah of Judah opened himself to the pernicious influence of Joram and his family and was punished by God for having done so. The punishment fell when Ahaziah got entangled in the revolution of Jehu and the downfall of Joram and met his own end in the process. The Chronicler's interest thus rests totally on the fate of the Judean king, while Joram serves only as a background figure.

3. A Levite, a member of the house of Amram, and a descendant of Moses' son Eliezer (1 Chr 26:25; cf. 23:6–24). He appears in a list of Levites to whom have been entrusted the oversight of the temple treasures, which is to say of the implements pertaining to the sacrifices and the other cultic activities as well as of the dedicated gifts (1 Chr 26:20–28). While the text is set in the time of David, it more likely reflects arrangements in the postexilic Jerusalem temple. Joram belongs to that particular group which has the responsibility of administering the dedicated gifts.

4. A priest from the time of Jehoshaphat (2 Chr 17:8) who was sent out along with another priest, eight Levites, and five high officials in order to instruct the people in the Book of the Law of God. It is unlikely that any older

tradition lies behind this notice about instructing the people, in contrast to what one reads in 2 Chr 19:4–11.

5. An Aramean prince, son of King Toi of Hamath (2 Sam 8:10). After David's victory over the Aramean king Hadadezer of Zobah, who had been in conflict with Hamath, Toi sent his son to David at Jerusalem with costly gifts (8:9–12). The real name of this Aramean prince was almost certainly Hadoram, as given in the parallel passage in 1 Chr 18:10. For an Aramean to be named Joram would be most surprising, since this form of the name contains the theophoric element *Ya[hweh]*. The appearance of the name Joram for an Aramean prince has been taken as evidence for a subjection of Hamath to the overlordship of David, an event which led to changing the name of the successor to the throne of Hamath (Malamat 1963: 6–8; 1983: 18, 39–42). However, it is more likely that in 2 Sam 8:10 we are dealing with a scribal error, since the LXX here attests essentially the same form of the name as appears in 1 Chr 18:10.

6. A brother of Tibni, the individual who briefly contested Omri for the throne of Israel (1 Kgs 16:21–22). The reference has it that both Tibni and Joram died and thereby cleared the way for Omri to become king. To be sure, the phrase "Joram, his brother" does not appear in the Hebrew text of v 22; it is to be found only in the LXX version. Since the origin of this additional phrase in the LXX cannot be explained, a strong claim is made for its originality; for unknown reasons, it must have fallen out of the Hebrew text. This state of affairs has certain consequences for the interpretation of the verse. If the death of both brothers can be related in one breath, then the supposition lies close at hand that these brothers met some sort of violent end rather than natural deaths.

JORDAN RIVER [Heb *yardēn*]. The river that runs from Mt. Hermon S to the Dead Sea, thus separating the W part of ancient Palestine (Cisjordan, West Jordan, "Canaan," "the promised land" [Num 34:10–12; Josh 22:35]) from the E part (Transjordan, East Jordan, "East Palestine" [Glueck 1968]). It is common to differentiate between the Upper Jordan river (N of the Sea of Galilee) and the Lower Jordan river (S of the Sea of Galilee). The Lower Jordan river was the dividing line between the two halves of the tribe of Manasseh (Josh 16:7), and it also constituted the W boundary of the tribes of Reuben and Gad (Numbers 32); thus two and one-half of the Israelite tribes resided outside the "promised land." It also constituted the W boundary of the earlier kingdoms of Sihon and Og (Deut 1:4). The Upper Jordan was the E boundary of the tribe of Naphtali (Josh 19:33–34), while the Lower Jordan was the E boundary of the tribes of Issachar (Josh 19:22), Ephraim (16:7), Benjamin (18:2), and Judah (15:5).

A. "Jordan" in Ancient Texts

The Heb *yardēn* appears 181 times in the OT, mostly (165 times) with the definite article; so it is usually "the Jordan." Most references are in the historical narratives of Genesis–Kings and Chronicles, with only 10 references appearing elsewhere. The LXX, the Apocrypha, and NT (15 references) use *Iordanēs*. The oldest references to the Jordan, however, appear in 19th Dyn. Egyptian records as *ya-ar-du-na* (see *ANET*, 242), one of which (*ANET*, 477) addresses the important question of how best to cross the river. The first biblical reference is in the story of Abram and Lot (Gen 13:10), in which Lot chooses the plain or circle (Heb *kkr*) of the Jordan for his flocks. The location is uncertain. Elsewhere the word is used for the S Jordan valley around Jericho (Deut 34:3) and also for the middle Jordan valley around Succoth and Zarethan (1 Kgs 7:46). Glueck (1968: 79) claims that *kkr* is the *ghor* (see C below), and only secondarily applies to separate locales. Since Lot ends up in Sodom (usually located at the S end of the Dead Sea), it is possible that the plain there was fertile and therefore considered a *ghor (kkr)*.

The Jordan river figures prominently in the story of the Israelites' entrance into the promised land (Joshua 1–4). Moses was not permitted to cross it with the other Israelites (Deuteronomy 34; cf. Num 20:10–13; Deut 32:48–52), and the Jordan was a clear natural landmark for establishing tribal boundaries (see above). In fact 117 of the biblical references to the Jordan river mention it in connection either with this crossing or with these boundaries. Indeed, it is in this context (of crossing and boundary) that the Jordan river continues to stand as a powerful theological symbol or metaphor within both Judaism and Christianity (see F below).

Various judges and their troops fought back and forth and beside this boundary line (e.g., Judg 3:28; 6:33; 7:24; 8:4; 12:5–6; cf. 1 Sam 13:5–7); David likewise crossed and recrossed it both in victory and in defeat (2 Sam 10:17; 16:14; 17:22–24; 19:15–18, 31–41; etc.). Elijah and Elisha repeated Joshua's feat of stopping or splitting the water's flow (2 Kings 2; 6:1–7); and Elisha told Naaman the Syrian to bathe in its waters to cure himself of leprosy (2 Kgs 5:12). Isa 9:1 foretells of a new glory for Galilee beside the Jordan, and the "jungle of the Jordan" figures in the prophecies of Jeremiah (12:5; 49:19; 50:44) and Zechariah (11:3). In the NT Jesus and many other Jews were baptized by John the Baptist in the Jordan (Mark 1:1–11 and parallels).

B. The Name

There is some debate on the meaning of the name of the river, Heb *yardēn*. Some translate it as "the descender," from the Semitic *yrd*, "to descend"; thus it is "the river that comes down" (BDB, 432–34). McKenzie (1965), however, thinks this is improbable; and Gehman (*WDB* [1970 ed.] "Jordan") calls this a popular etymology.

Cohen (*IDB* 2: 973–78) thinks the name is Aramaic; it may even ultimately be non-Semitic. He notes that *-dn* may reflect the Indo-Aryan *don*, "river"; cf. Danube, Don, Dniester), while *yr-* could be Indo-European for "year"; thus *yrdn* could mean "perennial river" (see Aharoni *LBHG*, 111). It is also called the river of Dan. Alden (1975) translates *yardēn* as "water judges." The "water" is derived from the Hurrian *iar*, "water," and in Heb *dan* means "judges"; thus *yardēn* means "the water (or river) of Dan."

Kenyon (*HDB* rev. ed., "Jordan") notes as fanciful Jerome's derivation of the name Jordan from the names of two rivers, the "Jor" and the "Dan." Smick says that Jerome's "jor" is derived from *yĕʾōr*, "stream" (equivalent to Gk *hreithron*); thus *yrdn* represents "the stream of Dan." Smick (1973: 26–31), following Gordon (1959: 122, n. 19), argues persuasively that *yardēn* simply means "river": the Hebrew use of the definite article along with it suggests that it is a common noun, not a proper name. For example, in the works of Homer, Nestor refers to the Celadon in Elis of the Peloponnisos as *Iardanou amphi hreethra* (*Il.* 7.135), and Menelaus came to Crete, where the Cydonians dwelt *Iardano amphi hreethra* (*Od.* 3.292). Smick translates this phrase (used for two different rivers) as "on both sides of the streams of the river"; thus *Iardanos* is an old E Mediterranean word for "river."

Another term for the Jordan in Arabic is *esh-Sheri'a*, "the watering place" or *esh-Sheri'a el-Kebireh*, "the big water." Some call the entire river *el-Urdan/Urdunn*, "Jordan," others use this term only to refer to the Lower Jordan river, while still others use the term to refer only to the Upper Jordan river, calling the lower Jordan *esh-Shriat* (pl. of *sheri'a*), "the fords." Har-el (1978: 65, quoting Horowitz), says the upper Jordan was called *el-kabir*, while the lower Jordan was the "Lesser" *(el-Urdun es-saghir)*.

C. Geological History

The Jordan river runs through 124 miles of the Great Rift valley, a 4000-mile-long tectonic fault zone stretching from Turkey to E Africa. Some 20 million years ago a shift begun in the subsurface plates beneath the continents created a massive fracture in the earth's surface. Two faults in the earth's crust run parallel from Mozambique and Lake Nyasa N through Ethiopia, the Red Sea, Aqaba, the Wâdī el-Arabah, the Dead Sea, and the Jordan river. The edges of the two continental plates are clearly visible on maps as the two sides of the Red Sea and of the Jordan valley. Further N there is a single fault through the Bekaa valley of Lebanon and the Ghab marshes of Syria. This fault divides the Lebanon mountain range (Jebel Libnan) from the Anti-lebanon. The latter includes the biblical Mt. Amana (Cant 4:8; Jebel Zebadani) in the central region and Mt. Hermon at the S end. A ridge, the Jebel Bir ed-Dahr, separates the Jordan river from the Litani (Leontes) river in Lebanon.

The Lower Jordan valley portion of the Great Rift was formed by further faulting over 2 million years ago. It is the lowest spot on earth, reaching 2570 ft below sea level at the bottom of the Dead Sea. Between ca. 70,000 and 14,000 B.P. the area from Galilee to the Dead Sea was a single body of water, which has been called the Lisan Lake. In the following post-pluvial period, the Lisan Lake dried up, leaving the Sea of Galilee and the Dead Sea, with the Lower Jordan river gradually eroding its way between the two across this old lake bed.

The Rift valley averages 6 miles wide, but it is only 1.5 miles wide at Marj 'Ayoun in the extreme N, 4 miles wide at the Sea of Galilee, 7 miles wide at Beth-shan, and 15 miles wide at Jericho. Cretaceous (65–136 million years ago) limestone, dolomite, and chalk are found along the

edges of the Great Rift. The Rift valley has several levels. One level, ca. 650 feet above the river, is geologically Pliocene (2–13 million years ago). Lower down, about 150 feet above the Jordan's waters, is the *ghor* ("bottom" or "depression") of the Quaternary period (2 million years ago to the present). The river area itself (i.e., the floodplain) is called the *zor* (Arabic for "thicket"). Between the *zor* and the *ghor* are some eroded marl hills called *katar* which, together with the *ghor,* once constituted the bottom of the ancient Lisan Lake.

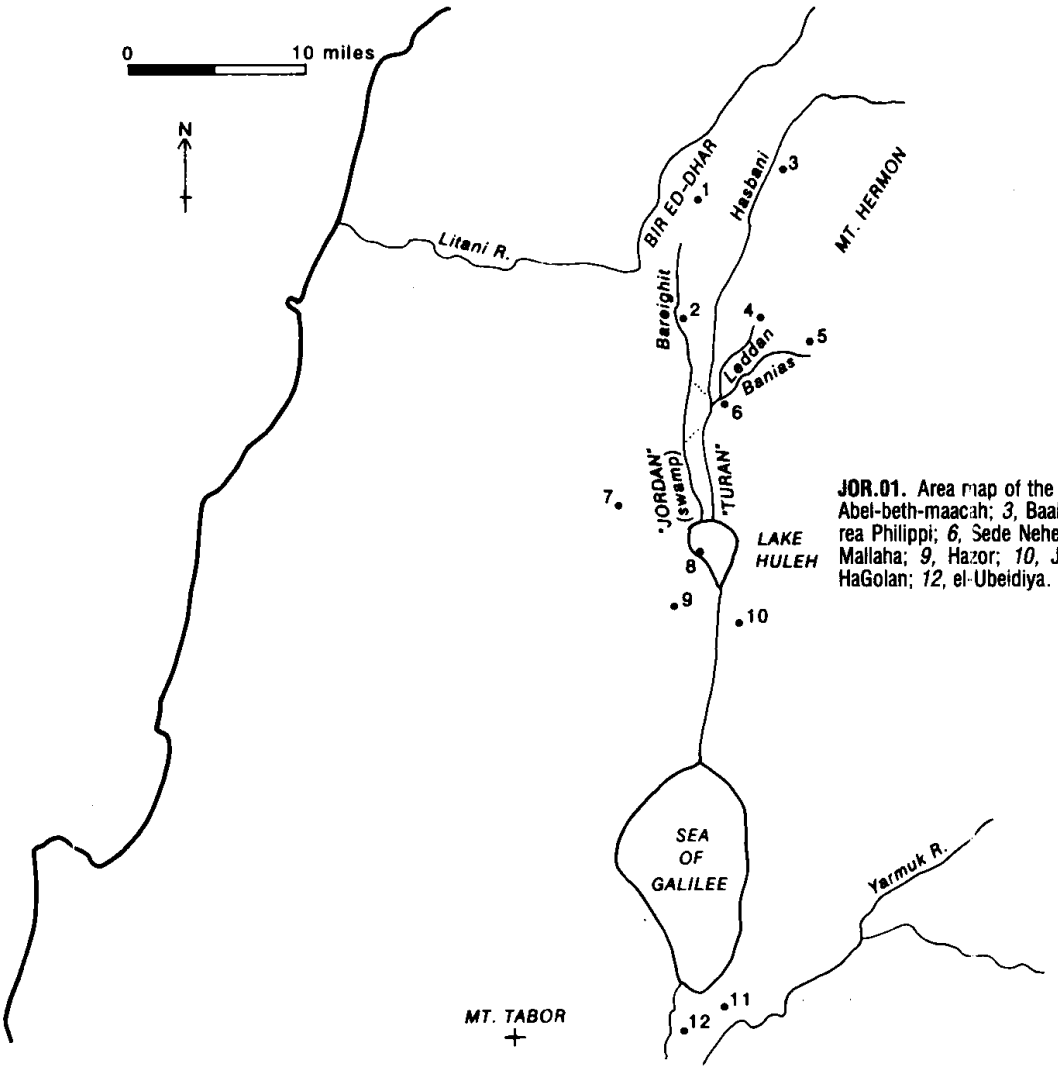
In biblical times the *zor* was called "the jungle (Heb *gā'ôn*) of the Jordan" (Jer 12:5; 49:19; 50:44; Zech 11:3). Here *gā'ôn* (lit. "pride") may mean "swelling up" in the spring flood. Hebrew *gā'ôn* also means "luxuriant growth," so "pride" could be an anthropomorphism of the river's "pride" in its vegetation. The salt-tolerant Euphrates poplar and the Jordan tamarisk are characteristic of the Jordan's banks. There are also willows, acacia, Dead Sea "apples of Sodom" (a wild grape), oleander, thistles, reeds, broom plant, and underbrush. In earlier times this "jungle" of trees and brush was between 200 yards to a mile wide and was the home of lions (which became extinct there in the 19th century), leopards, boars, ibex (all three still present ca. 1900). Foxes, hyenas, and jackals are still present in the *zor,* as are 100 species of birds (23 of which are unique to the Jordan valley and 45 of which use the valley as a migration route). With the advent of modern drainage and the extension of cultivation into the area, the *zor* had begun to diminish.

Except for the river itself and its tributaries, the valley is rather dry. Rainfall in the Huleh basin is ca. 22 inches a year, while at Jericho it is less than 3.5 inches a year. The summers are hot, averaging 80°F at Huleh and 90°F at Jericho (even reaching 130°F on occasion). The winters, however, are mild, averaging between 52 and 57°F in the Huleh and at Jericho.

D. The Upper Jordan River

1. The Sources of the Jordan. There are four sources for the Jordan, fed by the melting snows on Mt. Hermon (ca. 9232 ft above sea level). The westernmost source is the Bareighit ('Iyon/'Ayoun), a stream beginning in a short valley at the S end of the Jebel Bir ed-Dahr. There are springs at Marj 'Ayoun (Jdeidah), 1650 ft above sea level, S of Ijon (M.R. 205308) and N of modern Metullah (at the N tip of modern Israel's border with Lebanon). About 1.5 miles S of Metullah the stream flows past Abel-beth-maacah (M.R. 204296). There are spectacular 60-foot falls at et-Tannur. Several maps show the Bareighit flowing into the Huleh swamp (*GP,* 192; Smick 1973: 192), but others show it joining the 24-mile-long Hasbani less than 1 mile before the latter joins the remaining sources (the text of *GP,* 192 says that the Bareighit joins the Hasbani just before the marshes). See Fig. JOR.01.

The Hasbani is the next westernmost source of the Jordan river, beginning halfway between Damascus and Sidon (1800 ft above sea level) on the W slope of Mt. Hermon near Hasbaya (Baal-gad) in Lebanon. It crosses the modern Lebanon-Israel border at Jisr al-Gharje (ca. 400 ft above sea level). The third source of the Jordan river is the Leddan, which starts at the S end of Mt. Hermon in the springs of ʿAin Leddan (altitude of ca. 500 ft), W and SW of Dan (Tell el-Qadi; M.R. 211294). The Leddan runs only 4 miles before joining the Banias.



The Banias is the fourth and easternmost source of the Jordan river. It is 6 miles long, and starts 2 miles further E of the Leddan in a large cave 1200 ft above sea level at the base of Mt. Hermon. The cave was considered the home of a god, which the Greeks identified as Pan (giving the name Paneas to the city and district, whence the modern Banias). Herod the Great built a temple here to Augustus Caesar. His son, Philip the Tetrarch, added to the site and called it Caesarea Philippi after Tiberius Caesar and himself (see also Matt 16:13–20; Mark 8:27). The Banias joins the Leddan at Sede Nehemiya (M.R. 208288), and a half mile further the Hasbani joins them. The mingled waters split a few miles further and at one time flowed on in separate channels as the Jordan and the Turan (Tara?) through the marshes and into old Lake Huleh.

2. The Huleh Basin Area. The Huleh basin or depression (ca. 14 miles long by ca. 5 miles wide) is about 15 miles N of the Sea of Galilee. At the S end of the basin is the former Lake Huleh (perhaps Meron; Josh 11:5–7; Josephus' Semechonitis). The marsh may have been a source of reeds for the papyrus manufactured in ancient Phoenicia. In the 1950s both the marsh and the lake were drained (except for an 800-acre wildlife preserve at the S end of the old lake), providing 15,000 acres of new farmland. Today, Israel's W canal drains the Jordan section, and the E canal the Turan flow. The triangular-shaped Lake Huleh was originally 2 miles wide by 3 miles long, and from 9 to 17 feet deep. In the hills W of the former marsh is Kedesh (M.R. 200279).

On the W edge is Einan (ʿAin Mallaha), found in 1954 during the drainage operations. Several strata of round houses and numerous burials were found dating from the Natufian culture of the Mesolithic (ca. 14,000 B.C.; Pritchard [1987: 16] dates it ca. 10,300–8500 B.C.). The people had sickle blades, but it is not clear whether these were used in harvesting wild grain or if it is possible that they already had some domesticated grain. In any event this marks the beginning of an agricultural tradition around the Jordan river that extends through the biblical period into the present. Beisamun is also located on the W side of Huleh (Pritchard [1987: 26] shows it SW of Huleh). Here a Pre-Pottery Neolithic culture from ca. 7000 B.C. preserved the skulls of their dead and remolded the features in plaster (a number of these have also been found further S at Jericho).

Jisr Banat Yaʿaqub (Heb Gesher Benot Yaʿakob, "Bridge of the Daughters of Jacob") is 2.5 miles S of Huleh (before it was drained). The name is derived from the Crusader convent of the Daughters of St. James (Jacob) located there. To its W were found Pleistocene deposits (2 million to 10 thousand B.C.; Pritchard [1987: 16] says 1.5 million to 90 thousand B.C.), including elephant, deer, horse, bison, pig, and rhinoceros remains, along with flint and basalt bifacial axes dating ca. from 300,000 to 100,000 B.P. (Anati 1963: 67).

3. The Sea of Galilee. Below the Jisr Banat Yaʿaqub the Jordan river flows 7.5 miles through a gorge as much as 1000 feet deep, cut through Pleistocene basalt. It enters a plain about a mile N of the Sea of Galilee. The Sea of Galilee is 12 miles long and 7 miles wide, reaching as deep

JOR.01. Area map of the Upper Jordan River. *1,* Ijon; *2,* Abel-beth-maacah; *3,* Baal-gad; *4,* Dan; *5,* Banias/Caesarea Philippi; *6,* Sede Nehemiya; *7,* Kedesh; *8,* Einan/ʿAin Mallaha; *9,* Hazor; *10,* Jisr Banat Yaʿaqub; *11,* Shaar HaGolan; *12,* el-Ubeidiya.

as 150 feet in one place. It is the lowest freshwater lake in the world and is an important fishing area. There are 35 species of fish in the Jordan river, 16 of which are unique to the Jordan. In Greco-Roman times the fish were salted for export at Magdala, one of several settlements around Galilee.

E. The Lower Jordan River

1. South of Galilee. The Jordan river flows out of the S end of the Sea of Galilee. A mile S is Tell Ali, a Neolithic site with some remains like Beismun and Jericho. A similar culture is found further S at Munhata. East of the Jordan and N of the Yarmūk is the site of Shaar HaGolan (M.R. 208233), where the Neolithic Yarmūkian culture was first discovered in 1943, dating from ca. 5000 B.C. (Pritchard says 6000–5000 B.C. for both Munhata and Shaar HaGolan). It is significant both for its more than 100 "art" pieces (including human figurines carved in pebbles and molded in clay) and for its pottery decorated in a herringbone pattern.

Two miles S of Galilee are the mounds of Maskana and el-Ubeidiya (M.R. 205232), where excavators have found evidence of the Pebble Culture (ca. 600,000–300,000 B.P.; Aharoni [1978: 13] says 900,000–700,000 B.P.; Pritchard [1987: 16] says 1.5 million–90 thousand B.P.). At Ubeidiya skull fragments from this culture were found (Anati 1963: 31, 59–60), and animal remains included alligator, elephant, hippopotamus, and rhinoceros.

2. The River's Course. The Lower Jordan river flows S to the Dead Sea, which is ca. 50 miles long, 10 miles wide, 1285 feet below sea level, and (in places) another 1285 feet deep. Any fish still in the Jordan river of course die when they reach the 35 percent salt water of the Dead Sea. On a map the Jordan runs 124 miles, but the actual course of the river is actually twice that long because it twists and turns so much. This is especially true of the Lower Jordan river, which is 65 miles long when measured in a straight line between the Sea of Galilee and the Dead Sea, but actually winds on for 135 miles. It ranges from 2 to 10 feet deep and is ca. 100 feet wide. Its shallowness, swiftness, and tortuous course make it unnavigable, although U.S. Navy Lt. W. F. Lynch (1849: 265) floated two flat-bottomed boats from the Sea of Galilee to the Dead Sea in 1848 and reported 27 threatening rapids and many lesser ones. Anati (1963: 15), however, claims it is navigable in most parts and affords easy communication throughout the valley, although he may have meant that it could be easily crossed.

3. Tributaries. The Jordan river traditionally flooded in the spring (Josh 3:15), when its rushing waters carried a great deal of silt downstream, forming deltas at the Sea of Galilee and the Dead Sea. Lynch (1849: 267) measured the

waters as 11 feet deep in April. According to the Bible the Israelites walked across the Jordan river during the spring flood (Josh 3:10–17; 4:1–24; cf. Ps 114:3, 5), when the waters were miraculously parted or stopped. The latter (an actual blockage in the flow of the Jordan river) is attested on several occasions in the recent past. It was blocked at Damiyah for 16 hours in A.D. 1267 and again in 1907. In 1927 it was blocked for more than 21 hours. Schattner (1962: 54) reports several stoppages lasting for a few hours, such as one at Kefar Ruppin (between Beth-shan and Pella) in 1956.

Part of the flood and perennial waters comes from springs and tributaries along the way. Because of the rain-shadow effect on the E slopes of the Cisjordanian hill country, there are fewer tributaries feeding into the Jordan river from the W. However, because rainfall is often abundant in the hills of Transjordan, the tributaries flowing into the Jordan river from the E are more numerous and more voluminous. The more abundant water from the E tributaries helps explain why there were more settlements on the E side of the Jordan valley than on the W side. See also JORDAN VALLEY.

The northernmost tributary flowing from the E is the Yarmūk, which flows out of ancient Bashan and Gilead. It is not mentioned in the Bible, but today it forms part of the boundary between Syria and the Hashemite kingdom of Jordan. The Yarmūk enters the Jordan 5 miles S of the Sea of Galilee, almost doubling the water volume of the Jordan. Among the other wadis flowing into the Jordan from the E are the Arab (which joins the Jordan about 4 miles below the Yarmūk), the Taiyiba, the Ziqlab, the Jurm, the Yabis (perhaps the Cherith of 1 Kgs 17:3), the Kufrinja (draining the Ajlun area), the Rajib, the Zerqa (biblical Jabbok, Gen 32:22), the Shuʿeib (the biblical "waters of Nimrin," Isa 15:6), the Kafrein, and the Hisban (Wâdī Rama, which joins the Kafrein before entering the Jordan; together they are sometimes called the Wâdī Abu-Gharaba). These last three tributaries form the plains of Moab (Num 22:1).

The fewer W tributaries of the Jordan river are also important. In the N the Wâdī Bireh (Naḥal Tabor) flows from the vicinity of Nazareth and enters the Jordan just below the Yarmūk and above the Arab. The Wâdī el-Jalud (Naḥal Harod; Judg 7:1ff.) flows from Gilboa, the Jezreel valley, and the Beth-shan area. The Wâdī Fariʿah is fed by ʿAin Fariʿah (biblical Tirzah) and enters the Jordan below the Zerqa. At the S end of the valley, the strong springs at Jericho compensate for this area's lack of rainfall and made the large oasis there attractive for settlement as early as the Natufian period (Mesolithic, ca. 12,000–10,000 B.P.). Carbon 14 tests suggest the first settlement at Jericho was ca. 8000 B.C. Jericho also receives some water from Wâdī Qilt, another candidate for the Cherith (1 Kgs 17:3).

Whereas the four sources of the Upper Jordan river (see D.1 above) drain an area of 2735 km² (17 percent of the total area that feeds into the Jordan river), the tributaries of the Lower Jordan river drain 13,600 km². Of this, 2000 km² represent ancient Samaria and Judea (12 percent of the total area feeding into the Jordan), while the remaining 11,600 km² (71 percent) constitute ancient Bashan, Gilead, and Ammon. The flow of the Jordan has ranged from 8 to 35 billion cubic feet per year, with an average of 20 billion cubic feet per year above the Galilee. Below the Galilee the Yarmāk adds ca. 17 billion cubic feet per year, and the Zerqa adds ca. 1.6 billion cubic feet per year (although the flow is irregular). (The Jordanian E Ghor Canal today diverts part of the Yarmāk's waters away from the Jordan river, while the Israeli canal from Huleh to Beth-shan diverts 11 billion cubic feet per year into the water-supply grid of Israel.)

4. Fords and Bridges. Fords build up wherever tributaries deposit enough silt to create sandbars. Condor counted 60 fords, one of the northernmost fords of the lower Jordan being the Makhadat Umm es-Sisan at the Wâdī Arab (ca. 8.5 miles S of the Sea of Galilee). Another ford is the one at Beth-barah (Judg 7:24) below Beth-shan. The Damiya ford (at the Wâdī Zerqa) was at the biblical site of Adam (M.R. 201167), while the Roranije ford was at the mouth of the Wâdī Shuʿeib (M.R. 201143). There are two fords within 8 miles of Jericho: al-Maghtas (at the end of the Wâdī Qilt) and the el-Henu (half a mile to its S). The former (M.R. 202137) has been a favorite pilgrimage spot as the supposed location of Bethany beyond the Jordan, the site of Jesus' baptism. Lynch (1849: 255) and Brown (*John 1–12* AB, 44) record a tradition that this was also the place where Joshua and the Israelites crossed (cf. Boling *Joshua* AB, 170, also map p. 137).

The Jordan was first bridged by the Romans. Roman remains are found in several places: (1) just below Galilee; (2) 5 miles S at the mouth of the Wâdī Yarmūk; and (3) at Damiyah. In more recent times the main bridge over the Upper Jordan has been the Jisr Banat Yaʿaqub (M.R. 209268). The main bridges over the Lower Jordan include the Degania and Ashdot-Yaʿacob (M.R. 204229); the Jisr el-Majami (at the Wâdīs Arab and Bireh/Tabor); the Sheikh Hussein (M.R. 205211); the Damiya (M.R. 201167); the Allenby over the Roranije ford E of Jericho (M.R. 201143); and the Abdallah SE of Jericho (M.R. 201135) on a road opened in 1958 from Amman to Jerusalem.

F. The Jordan River as Religious Symbol

Most pilgrims to the Jordan river experience at least a slight disappointment that results when its relatively small physical size fails to measure up to their prior mental image of it. Indeed, because so many of the biblical references to the Jordan appear in connection with boundaries and crossings and because notions of "boundary crossings" are often laden with symbolic and metaphoric connotations of a religious nature, it is not surprising that the Jordan river has become a significant *metaphysical* reality within Judaism and Christianity.

Such a use of the Jordan river as religious metaphor may even have begun in biblical times. Indeed, in Psalm 42 "land of Jordan" (v 7) seems to be a poetic name for the netherworld (Dahood *Psalms I* AB, 258; Smick 1973: 101). The Jordan as a symbol of crossing from life to death (or from this world to heaven) seems to underlie Heb 3:17–19, and it continues to find expression in numerous Christian hymns ("Roll, Jordan, Roll"; "Jordan River is Deep and Wide"; "On Jordan's Stormy Banks I Stand"; and "I Won't Have to Cross Jordan Alone"). Glueck's statement that the river is "of limitless sanctity to many millions of people" (1968: 19) perhaps overstates the case, but its

importance is extended as a symbol or a metaphor of momentous, climactic, and often miraculous events.

HENRY O. THOMPSON

JORDAN VALLEY. The Jordan valley, part of the huge Miocene rift which extends from N Syria to Central Africa, in the section between Lake Tiberias (= Sea of Galilee) and Aqaba, is entirely below sea level. From the freshwater Lake Tiberias (ca. 212 m below sea level), the Jordan river meanders S and empties into the salty, sterile Dead Sea (ca. 394 m below sea level). From here the valley broadens into the Wâdī Araba to Aqaba. The total length from Tiberias to Aqaba is ca. 380 km, while from Tiberias to the Dead Sea is 105 km. The levels of both Tiberias and the Dead Sea fluctuate greatly, but the level of the Dead Sea is consistently dropping and its salinity is increasing.

A. Geography

The relatively flat floor of the valley is called the *ghor* and in the N is 3.5 km wide (almost all of which is on the E side), whereas closer to the Dead Sea it widens to ca. 10 to 13 km. The Jordan river meanders through a small secondary valley, about 30 to 60 m deep, called the *zor.* Along the edge of the *zor* rising up to the *ghor* proper are the barren, generally uncultivable, marl hills of the *katar.*

On the E and W sides of the valley are hills which rise to 600–1200 m above sea level. These enclose the valley for its entire length and help to keep temperatures mild during the winter. The valley floor formed slowly from the continuous erosion of soil from the hills, mainly via the 14 major and secondary wadis which flow into the Jordan and the Dead Sea. The main tributary into the Jordan river is the Yarmūk river, with the second being the river Zerqa (Jabbok). Nine other wadis flow from the E hills—Wâdīs Arab, Ziqlab, Jurm, Yabis, Kufrinja, Rajib, Shuʿeib, Kafrein, and Hisban.

Rainfall occurs only between October and May, with an annual mean of 380 mm in the N and 164 mm in the Wâdī Araba. Temperatures also vary, with the S generally a few degrees warmer all year-round than the N. The mean summer temperature is 30.5°C (86.9°F), with mean extreme at 41.5°C (106.7°F); and the mean winter temperature is 14°C (57.2°F), with mean extreme at 5.3°C (41.5°F).

Population and settlement have varied throughout the valley's history, though it is likely there has always been a nomadic population, a fact which makes the extent of settlement difficult to estimate. Today, more than 70,000 people live in the valley, encouraged by extensive government projects for rehabitation and development of the some 360,000 dunams of cultivable land between the Yarmūk river and the Dead Sea.

B. Exploration

In the 19th century travelers to the area without exception reported nomadic occupation and some degree of cultivation. In 1811 the explorer Burckhardt observed a combination of "luxuriant growth" and some "parched desert" with some cultivation by the nomadic settlers.

In the 1840s several small surveys were conducted by the British and American navies. In 1847 the British made a five-week boat trip down the Jordan river into the Dead Sea. The following year saw the American exploration. Between 1875 and 1877 an American archaeologist with the American-Palestine Exploration Society, S. Merrill, explored the area E of the river.

However, not until the 1920s were any archaeological surveys conducted in the area. The first of these was by W. F. Albright (Albright 1926). In the 1930s N. Glueck made the first detailed survey of the E half of the valley between Tiberias and Aqaba. He discovered a total of 90 sites, observing that they were mainly in the *ghor* area rather than *zor.*

In 1953 DeContenson and Mellaart surveyed the area between Tiberias and the Dead Sea, the same area surveyed in detail by the 1975–76 survey project. This latter project, directed by M. Ibrahim, K. Yassine, and J. Sauer, sought to provide a comprehensive examination of this area, to visit already known sites, and to locate new ones. The survey found a total of 224 sites and confirmed that most sites (representing all periods from Neolithic to Ottoman) were located near wadis and springs. One quarter of the sites were between the Wâdīs Kufrinja and Zerqa, probably the best irrigated and most fertile region and the most extensively used throughout history. This contrasts with the 23-km stretch between the Wâdīs Zerqa and Shuʿeib, where the *katar* is extensive and there are no perennial streams.

In 1985 an intensive survey of the E foothills between Sweimeh, near the Dead Sea, and the Wâdī Jurm was directed by M. Muheisen. The survey sought to locate Paleolithic settlements and cave shelters. More than 100 such sites were recorded, the most important of which was Abu Habil.

In 1973 a survey of the E foothills of the S *ghor* between the Dead Sea and the Red Sea also revealed extensive

occupation, notably in the EB, such as Bâb edh Dhrâ', Numeira, and Tell el Khalifeh. This survey was complemented by the Bergmuseum metallurgical survey of metal mining and smelting sites in the S *ghor*.

The early archaeological, historical, and anthropological heritage of the Jordan valley is now threatened by its development for farming, irrigation, housing, and roadworks in addition to the effects of ongoing military activity. These facts led to the establishment by the Institute of Archaeology and Anthropology of the Yarmūk University of the "Jordan Valley Project," a long-range and broad-scope plan to document the social history of the valley through collations of bibliographies, atlases, photographs, and videos. This is complemented by fieldwork, including selecting MA theses, on aspects of the Jordan valley and currently the study of irrigation systems (ancient and modern), forms of housing and shelter, village plans, and settlement patterns.

All these surveys have revealed constant occupation in various regions of the valley from the Neolithic to Mamluk periods. This evidence is supported by an increasing amount of excavation work being conducted in the valley. Upwards of some 20 sites have been or are being excavated between Tiberias and the Dead Sea. Sites like Pella and the Wâdī Hammeh, Tell el-Hayyat, Tell es-Sa'idiyeh, Tell Abu Hamid, Tell Deir'Alla, and Tell Mazar are all multiperiod tell sites and, except for Pella, which is located in the foothills, are easily identified mounds in the central valley floor. Other sites of only one or a few occupation periods that have had major excavations include Tell Shuneh North, Kataret es-Samra, Tell Umm Hammad, Tiwal esh-Sharqi, and Tuleilat Ghassul. However, much more work remains to be done, especially since so much rich archaeological evidence is being threatened by the development of the valley.

The following summary of settlement periods is based largely on surveys and evidence supplied by these excavations. The archaeological evidence of the valley dates to about 10,000 B.C., with evidence from the foothills dating to ca. 400,000 B.C. and still-earlier material from the highlands and deserts.

The valley seems often to have experienced changes in climate and settlement, though a nomadic presence has probably always existed. After about 5000 B.C., coincidental with a drying phase, the population apparently shifted northward. The Wâdī Kafrein area was much wetter even as recently as five centuries ago—possibly swampy and malarial—whereas the Wâdī Yabis region was much cooler and drier.

Surveys and excavations have shown the E Bank historically to be more settled than the W because of more numerous and consistent water sources. However, the E and W were clearly linked by trade routes to the Mediterranean from centers in central Jordan and Damascus. A relatively easy E–W route through Beth-shan to Haifa avoided travel through the hills of Lebanon. There were also secondary Roman roads linking Amman to Damiya via Salt and the Decapolis centers of Gerasa and Gadara to the Jordan valley.

C. Through the Chalcolithic

All Pre-Pottery flint sites found in the 1975–76 survey were near or on the first rise of the E foothills, usually near wadis. The Muheisen survey revealed Paleolithic occupation in rock-shelters and caves up in the foothills.

The Neolithic/Chalcolithic evidence shows extensive occupation in the E foothills near wadis, on the valley floor, on the edge of the *katar* hills, and in the *zor*. Most sites were concentrated along primary wadis and near water sources and appear to have been open agricultural settlements. The evidence of the first settlement sites between ca. 10,000 and 6000 B.C. is from the S area in the Wâdīs Nimrin and Shu'eib across the valley from Jericho. After 6000 B.C. domesticated agriculture was established in the valley, with evidence from Jericho and Ghassul of wheat and barley cultivation and sheep and goat domestication. Significant architectural features of this period are the stone dolmens in the foothills about 50 to 100 m above the valley floor overlooking Ghassul and Damiyeh. In the S *ghor* the farming community of Bâb edh Dhrâ' has yielded pottery from ca. 4500 B.C.

D. The Early Bronze Age

Early Bronze sites, generally more defined than earlier Neolithic-Chalcolithic sites, seem to have been mostly fortified villages or cities. Generally they are located along the E foothills, sometimes on the edge of the *katar*, and particularly on isolated foothills overlooking the valley floor. EB I pottery was found at sites over the entire valley, but later EB II–III material was detected only in the area just N of the Dead Sea.

The EB IV (2300–1950 B.C.) is well represented in the valley in settlement sites and tombs. Located again near wadis, most communities were unfortified farming communities—their proliferation implies an increase in population. Located across the valley in the foothills, along the valley floor, and on the edge of the *katar* hills, many sites reveal an abundance of basalt saddle querns suggesting agricultural communities. One of the largest of these is Tell Umm Hammad, near the Wâdī Zerqa. Tombs were usually cut into the *katar* hills, with narrow shafts leading into single, oval-shaped chambers.

E. The Middle Bronze Age

Some MB I–III (1950–1550 B.C.) sites were rebuilt over earlier ruins, though most were founded *de novo*. The number of sites is less than the EB, with most of the settlements in the central and N parts of the valley; no clear evidence emerges from the S region near the Dead Sea. Some sites have evidence of minor stone structures and probably represent small to medium-sized villages. They are distributed in the lower E foothills, the valley floor, the edge of the *katar*, and the *zor* itself.

F. The Late Bronze Age

The LB Age (1550–1200 B.C.) is less well represented than many other periods. The sites are concentrated between the Wâdīs Yabis and Zerqa, in the foothills (e.g., Pella), the valley floor (e.g., Tell Deir 'Alla and Mazar), and near the *katar* (Tell es-Sa'idiyeh). Deir 'Alla appears to have been the most prominent of these and probably served as a religious center. Most LB sites were reoccupied in the Iron Age and later, some becoming very large settlements.

G. The Iron Age

Iron I (1200–918 B.C.) sites usually were located in already developed areas and continued to be occupied into the Iron II period. One small site has been identified in the S (Rashidiyeh West), and several large sites in the N, (e.g., Tell Deir ʿAlla, Pella, Tell Al-Maʿajajeh, and Tell Mazar).

While there was some continued occupation from Iron Age I into Iron Age II, most sites seem to have been abandoned until the Hellenistic, Roman-Byzantine, or Islamic periods. Some, however, show evidence of Persian settlement (e.g., Tell el-Maʿajajeh, Tell Mazar, and Tell ʿAmmata).

H. Hellenistic Through Byzantine Periods

Hellenistic settlements are found across the valley from the foothills to the *zor* and usually on sites with evidence of earlier occupation. Most reveal habitation into the Early Roman period.

The Roman-Nabatean era (63 B.C.–A.D. 324) saw the formation of the Decapolis, which included the valley sites of Pella and Beth-shan.

In the S *ghor* the Nabateans constructed an impressive irrigation system at Wâdī Telah, S of the Dead Sea. The dam directed water through a 500-m stone canal to a large pool in the hills. From there it was diverted into irrigation channels to irrigate a large area on the valley floor.

Early Roman sites are well represented throughout the valley, usually on the ruins of earlier occupation. Most were continuously occupied, but some were temporarily abandoned until later Byzantine and Islamic periods. The population density apparently increased from the Hellenistic phase, with better-developed and larger-scale Roman agricultural systems.

The Late Roman phase is less well represented, mostly on sites occupied from the Early Roman period, with no new major sites established. Road milestones have been found near the main Jordan valley road close to Khirbet Sleikhat, Keraymeh South, and El-Hamra.

The increase in population and site density in the Byzantine era shows settlement expansion into the barren area between the Wâdīs Zerqa and Nimrin, with evidence of cisterns to store water. The Late Byzantine period shows the same density with apparently agricultural communities located throughout the valley, especially on the valley floor.

I. The Umayyad Period

The Umayyad occupation (ca. A.D. 630–730) reveals a less extensive occupation with settlement declining sharply, probably reflecting the move of the capital from Damascus to Baghdad. Irrigation systems and agricultural settlements continue, with the area S of the Wâdī Zerqa showing large reservoirs and connected canal systems.

JORDAN, JUNGLE OF (PLACE) [Heb *gāʾôn hayyardēn*]. The vegetative growth along the river bed as the Lower (Galilee to Dead Sea) Jordan river winds its way through the floodplain called the *zor* 20 to 150 feet below the valley floor called the *ghor*.

The *zor* ranges from 200 yards to a mile across. *Zor* has been translated "thicket." The tropical heat and spring floods have produced a tangled thicket of vines, the Jordan tamarisk, willow, the Euphrates poplar, oleander, reeds, thorns, thistles, and other plants. Har-el (1978: 71) notes the reeds in the water, the cane, strip bushes (especially the wild orache, genus *Atriplex*), the trees plus bramble, asparagus, licorice, etc. The willow is characteristic of the N section of the river. The oleander flourishes in gravel and large stones.

The jungle provided cover for wild animals, including lions (Jer 49:19; 50:44; Zech 11:3). In 1848 Lynch (1849: 212, 226) saw "tiger" (leopard; Har-el 1978: 72) tracks and wild boar. There were jackals, hyenas, desert rats, otters, and as recently as 1898, bears. This may have made it a place of danger (Jer 12:5) though in this passage (5d) the contrast to running on safe ground (5c) may refer to stumbling in the tangle. While the tangle has receded somewhat in the face of modern agriculture, there are still some animals. Glueck (1968: 78) refers to jackals and wolves. To this wild life one should add many species of birds. Lynch (1849: 267) sighted wild ducks, herons, snipes, gulls, pigeons, partridges, hawks, storks, and swallows.

The Heb word *gāʾôn* comes from the root *gʾh*, which means "to rise up" and hence the nouns "pride" and "exaltation." The KJV translates Zech 11:3 as the "pride of the Jordan," which BDB (145) takes as majesty (Job 38:11, "majesty of thy waves"), referring to the green and shady banks. BDB notes a variant of "swelling" as referring to the agitated waters of the river, which is how the KJV translates the three Jeremiah references. Holladay (*CHAL*, 52) suggests "height" of the waves for Job 38:11 and for the thicket of the Jordan of Jer 12:5. Glueck (1968: 78)

says the thorns and thistles grow shoulder high. Lynch (1849: 227) described thorn bushes so large and abundant they looked like apple orchards, and there were 5-foot-high *kelakh* with up to 35 stamen each 10 inches long. He also noted deadwood caught in the branches of trees 15 feet above the ground, suggesting the depth of the spring floods (1849: 217, 246–48).

The LXX for Jer 12:5 and Zech 11:3 translates *gā'ôn* with *phryagma,* which Liddell and Scott render as the neighing of a spirited horse, and hence they metaphorically apply it to arrogance (LSJM, 1958). This supports the KJV translation "pride," but it anthropomorphizes the Jordan; "jungle" makes sense in our terms today.

Glueck (1968: 77) and Schattner (1962) claim the Jordan floodwaters deposit no silt like the Nile, while Har-el (1978: 71) claims the fertile soil which settles at the pride of the Jordan contributes to its fertility and its lush plant life.

HENRY O. THOMPSON

JORDAN, PREHISTORY OF. Interest in the prehistoric archaeology of Jordan might be traced back to the late 19th century, when Doughty remarked on several "flint instruments" that must have represented "an human labour . . . [by an] old human kindred which inhabited the land so long before the Semitic race" (Doughty 1921: 74, 76–77). Doughty's astonishment (1921: 74) at these obviously ancient products of humanity was not widely shared by his contemporaries passing through the land E of the Jordan river, nor were the immediately succeeding generations of travelers and pilgrims much interested in these old relics from a time that preceded biblical accounts of human history in the region. Nevertheless, shortly after the turn of the century several surveys had revealed the wealth of Stone Age human presence in this largely unexplored and poorly described area (e.g., Field 1960; Rhotert 1938; Zeuner 1957).

Despite a handful of concerted archaeological excavations and explorations (e.g., Kirkbride 1958, 1966; Waechter and Seton-Williams 1938; Huckriede and Wiesemann 1968) in the 2d and 3d quarters of the 20th century, it has been only within the last 10 to 15 years that the pace of prehistoric research in Jordan has accelerated. As a consequence, only the general outlines of Jordan's Stone Age past have emerged with any systematic clarity, and detailed reconstructions of lifeways in extreme antiquity cannot yet match the results obtained elsewhere in the Levant, such as Palestine, Lebanon, and Syria, where fieldwork has had a long and intensive history. Nevertheless, recent campaigns in Jordan have demonstrated that although overall trends common to the greater Levant are paralleled in the mountains, valleys, high plateaus, and deserts of Jordan, the region also demonstrates some remarkable aspects of local innovation and influence.

A. Lower Paleolithic

A. Lower Paleolithic (ca. 1,000,000–100,000 B.P.)

1. Early Acheulean (ca. 1,000,000–500,000 B.P.). Early evidence for human occupation is rare in Jordan, as it is elsewhere in the Near East, for a combination of reasons. Because these early ancestors lived in small groups that rarely stayed at one location for an appreciable amount of time, the accumulation of artifacts (principally chipped stone tools and debris) left for later archaeological discovery was numerically small and sparsely distributed over the landscape. The extreme age also allowed a long period of time for erosive forces to destroy Lower Paleolithic sites or to cover them from view by increasing depths of sedimentary deposits.

Despite these limitations, one site in Jordan appears to be an extremely ancient campsite. Located on a high terrace near Pella, the site of Abu Khas (Villiers 1983) overlooks the deep Jordan valley to the W. Hundreds of tools and thousands of flakes lie in a slightly disturbed sedimentary complex. The exclusive use of stone hammers (or hard hammer technique) to fashion the tools resulted in relatively crude specimens with distinctively sinuous cutting edges. Both technologically and typologically, the artifacts from Abu Khas resemble the stone tool industry from ʿUbeidiya, a site on the W bank at the S tip of Lake Tiberias that has been dated to more than 680,000 B.P. (Bar Yosef 1975: 574–75, 589). No animal remains were found at Abu Khas, but the variety of stone tools indicates that the inhabitants found the site to be a lucrative hunting location to which they returned frequently. No human fossils have been discovered either, although it is assumed that, as was the case at ʿUbeidiya (Tobias 1966), the inhabitants belonged to *Homo erectus.*

2. Middle Acheulean (ca. 500,000–250,000 B.P.). As was the case for the Early Acheulean, sites that can be ascribed to the Middle Acheulean period are also rare in Jordan and the rest of the Levant. Although lifestyles of the two periods were essentially similar, a distinction is seen in how the later *Homo erectus* hunters made their tools. The principal innovation was the use of "soft hammers" (animal bone, antler, or wood) to finish the process of implement manufacture, resulting in tools with straighter and more efficient cutting edges. In addition, small flakes of chert and flint became more important elements in the tool kits in the forms of knives, scrapers, and other "light-duty" implements.

In a small wadi along the S edge of Jebel Uweinid, near Azraq in the E desert, a heavily eroded series of hand axes, cleavers, and a few flakes that have been assigned to the Middle Acheulean were discovered in 1981 (Rollefson 1984). The location of the site suggests that it may have been selected because it was on a natural animal track between the springs and lake shores of Azraq and the grazing afforded in the hilly country to the SW.

3. Late Acheulean (ca. 250,000–100,000 B.P.). In definite contrast to the previous stages of the Lower Paleolithic, the Late Acheulean period is well represented throughout the region. The techniques used to make stone tools were refined to the extent that implements were often shaped to an elegance and symmetry that did not relate only to the utility of the artifacts. Heavy butchering tools became smaller and more easily manipulated, and the light-duty flake tools became an elaborate component of the tool kit. One particular method of tool manufacture, the Levalloisian techniques, began to assume great importance among the Neanderthal groups that now occupied the countryside, and well-formed spear points and knives appeared with consistent frequency.

The small Neanderthal hunting groups maintained the economic patterns of their forebears; their movements from one hunting location to another were dictated by the availability of game, plant resources, and water. Some sites appear to have been very favorable to the Late Acheulean people in Jordan, for artifact layers contain dense accumulations of stone tools at several oasis locations in the Azraq basin such as ʿAin el-Assad (Harding 1967: 155; Rollefson 1983a) and C-Spring (Garrard et al. 1987; Copeland fc.). On the other hand, the vast majority of Late Acheulean sites throughout the land were small in size; and the few numbers of artifacts at each indicate the short duration of occupation.

One outstanding Late Acheulean site in S Jordan offers a clear glimpse of a particular Neanderthal strategy of timing the hunt with the seasonal migration of game from winter grazing grounds deep in the Wâdī Araba to spring and summer vegetation in the highlands. This site, Fjaje, is actually a complex of Late Acheulean sites that extends 15 to 20 km along the semicircular rim of the Wâdī Araba escarpment, near Shobak. In the S section of this extensive distribution of hand axes and flake tools is the main campsite, a large (ca. 15 acres) area where a variety of different artifact types are concentrated (Rollefson 1981, 1985). The location of the Fjaje complex astride a major animal migration route is interpreted as a seasonal (springtime) meeting place where a relatively large number of Neanderthal hunting bands came to cooperate in a temporarily abundant "harvest" of animals that were concentrated in the wadi system on their way back to highland pasturage.

B. Middle Paleolithic (ca. 100,000–40,000 B.C.)

Many prehistoric archaeological surveys have revealed that Middle Paleolithic sites are more numerous than for any other period in the prehistoric past (e.g., MacDonald et al. 1983; Rollefson fc. a, b). The mobile hunting and gathering mode of life common to the Lower Paleolithic was maintained throughout the Middle Paleolithic period, although Neanderthals of the latter period developed a different approach to acquire and process organic and inorganic resources necessary for their survival. This cultural development is most clearly seen in the chipped-stone tool kit, where the large and relatively complex Acheulean hand axes and cleavers were replaced by smaller and more diversified Mousterian flake tools. Levalloisian techniques that were popular in many Late Acheulean sites became a prominent method of tool manufacture in almost all Middle Paleolithic camps, prompting the term *Levalloiso-Mousterian* for the material culture of the later Neanderthals (cf. Garrod and Bate 1937). A second cultural manifestation that used the Levalloisian techniques, called the Yabrudian, is known from restricted locations in Syria, Lebanon, and Palestine (e.g., Jelinek 1982), but with the possible exception of the far NE section of Jordan (Copeland and Hours 1981), the Levantine Mousterian, dominated by the Levalloisian techniques of tool manufacture, is characteristic of the area E of the Jordan Rift valley system.

Most of the known Middle Paleolithic assemblages in Jordan come from eroded or wind-deflated surface sites, and the rarity of in situ sites has greatly hindered detailed interpretations of the daily lives of Mousterian Neanderthals in Jordan. Nevertheless, a small protected rock-shelter in the Wâdī el-Ali between Tafila and el-Hasa (Clark et al. 1988) contains undisturbed stone tools, debris, and animal remains that will enhance the reconstruction of Neanderthal lifeways. Another rock-shelter in the Ras en-Naqb region of S Jordan also appears to contain undisturbed Middle Paleolithic deposits that promise to expand our understanding of Middle Paleolithic strategies and adaptations (Henry et al. 1983).

C. Upper Paleolithic (ca. 40,000–17,000 B.C.)

Recent archaeological surveys have shown a dramatic decrease in the number of sites attributable to the appearance of modern *Homo sapiens* hunters in Jordan (e.g., MacDonald, Rollefson, and Roller 1982; MacDonald et al. 1983; Rollefson fc. a, b). Comparable decreases in site numbers elsewhere in the Levant were shown to be correlated with paleoclimatic data that portrayed a colder and increasingly more desertified landscape throughout the Near East (Bar Yosef 1981), and the combination of the desiccation and the reduced Upper Paleolithic evidence was often interpreted as reflecting a starkly reduced population. But when one compares the number of sites per thousand years, the figures for the longer-lasting Middle Paleolithic are comparable in magnitude to those of the briefer Upper Paleolithic. The relatively larger size of some of the Upper Paleolithic sites further suggests that the population of the region may actually have increased despite a deterioration of the environment (cf. Rollefson fc. a).

Recent publications on Upper Paleolithic sites in Palestine have argued that two distinct cultural traditions occur near the coast and in the Negeb desert (Gilead 1981; Marks 1981). One of these, the Ahmarian, is characterized by large numbers of small blades, bladelets, and points but few end scrapers and burins. The other tradition is called the Levantine Aurignacian, which is dominated by end scrapers and burins made on sizable blades and flakes, while more diminutive elements are rare. The Ahmarian

appears to span the entirety of the Upper Paleolithic time period, although no absolute dates older than ca. 27,000 B.C. are known for the Levantine Aurignacian.

Currently the information from Jordanian in situ Upper Paleolithic sites is scanty, but it appears from preliminary excavation reports that the Upper Paleolithic dichotomy of Palestine is also present in Jordan. Two sites investigated by Henry in the Wâdī Rum region indicate Levantine Aurignacian affiliations (Henry 1982: 430), and the huge Site 618 at the head of the Wâdī el-Hasa drainage is evidently Ahmarian (Clark et al. 1988). The case for Upper Paleolithic traditions in the greater Azraq basin remains open to interpretation (cf. Garrard et al. 1985; Garrard, Byrd, and Betts 1986). Few details are yet available from anywhere in Jordan to flesh out the skeletal framework of this long but poorly known period of human development.

D. Epipaleolithic Period (ca. 17,000–8,500 B.C.)

The closing millennia of the Pleistocene epoch witnessed considerable variation in terms of climate change, subsistence economy, settlement patterns, and stone tool production.

The *Kebaran complex* is a generic term that covers marked regional variability in the Sinai, Palestine, and Jordan in terms of the presence and relative frequencies of specific stone tool types and the techniques used to produce them. Nevertheless, this geographic cultural diversity is loosely linked together by the dominance of microlithic tools (made on bladelets less than 50 mm long and 10 mm wide) that are supplemented by end scrapers and burins of larger dimensions. Ground-stone implements (mortars, pestles, and "bowls") appear in some quantity in Palestinian Kebaran sites (Bar Yosef 1981: 395), although such indicators of the intensive collection of wild plant resources have not been reported from Jordan. Here, Kebaran period sites (ca. 17,000–12,500 B.C.) have been found principally in the modern desert regions of the country, such as near Ras en-Naqb (Henry 1982, 1983), the E desert/steppe (Muheisen 1983; Garrard, Byrd, and Betts 1986), and the Wâdī el-Hasa drainage of W central Jordan (Clark et al. 1988; Clark, Majchrowicz, and Coinman fc.; cf. MacDonald et al. 1983). Since it appears that the climate of this period may have been even drier than at present (Garrard et al. 1987), it is not surprising that grinding stones are absent at Jordanian Kebaran sites.

Beginning at about 12,500 B.C. the environment throughout the Near East appears to have become somewhat cooler and moister than in the Kebaran period. Following the climatic change, possibly reflecting increasingly available plant and animal resources, human exploitation of modern desert regions became intensified. A palpable change in chipped-stone tools is also evident, for microliths took on regular shapes such as rectangles, trapeziums, and triangles, giving rise to the term *Geometric Kebaran* for the cultural period. Numerous sites from the Geometric Kebaran phase are known from Palestine and Sinai (Bar Yosef 1981), although known sites in Jordan from this time remain relatively scarce (Henry 1983; cf. Muheisen 1983). Ground-stone artifacts occur only sporadically, and it appears that seed or nut processing, if practiced at all, followed other methods not preserved in the archaeological record.

Throughout the Kebaran and Geometric Kebaran phases, the settlement pattern of Epipaleolithic hunting-and-gathering groups appears to have consisted of base camps that were occupied for several weeks or more at a time, while smaller sites reflect temporary specialized activities such as hunting camps or transient stations. The location of small sites in the highland zones and larger, probably more permanent sites at lower elevations suggests a transhumant pattern of settlement (Henry 1983: 135; Bar Yosef 1981: 395).

The last phase of the Epipaleolithic lasts from ca. 10,000–8,500 B.C. and signals a growing momentum in socio-economic aspects that, by the end of the phase, become virtually indistinguishable from the succeeding Early Neolithic period. Like the preceding Kebaran and Geometric Kebaran stone tool industries, this period exhibits marked geographic variation in tools and technologies (e.g., Henry 1983; Clark 1984; Byrd 1987) which have prompted a growing number of named variants that tend to add unnecessary complexity for a summary of developments. Since *the Natufian* is a term that has specific meanings for several prehistorians, for the sake of convenience all of the Late Epipaleolithic manifestations in Jordan will be subsumed under this Natufian label (cf. discussion in Bar Yosef 1981: 398; Henry 1983: 136).

Known settlements of the Natufian period are relatively numerous in Jordan; and as the result of several recent intensive surveys, they have been found in extremely diverse environments, including the Jordan valley (Edwards in McNicoll et al. 1984), the arid and semiarid sections of the Wâdī el-Hasa drainage (MacDonald et al. 1983; Byrd and Rollefson 1984; Clark et al. 1988), the arid and semiarid Transjordanian plateau (Kirkbride 1966; Byrd 1987; Henry and Turnbull 1985), and the bleak E basalt desert (Betts 1982). Site sizes range from small camps of several hundred m^2 in Wâdī Judayid in the Ras en-Naqb region (Henry and Turnbull 1985) or even smaller at Site 14/7, NE of Azraq (Betts 1982), up to several thousand m^2 at Tabaqa (Byrd and Rollefson 1984) and in the Wâdī Hammeh (Edwards in McNicoll et al. 1984; Edwards et al. 1988). The larger sites probably reflect a considerable degree of residential permanence that was made possible as the consequence of intensive plant collection, especially cereal grains. The crescent-shaped lunate microlith is the "hallmark" of the Natufian tool assemblage; but the presence of grinding stones, mortars, and tools with sickle sheen indicates a growing dependence on those plant resources that would become domesticated by the close of this period. Indeed, suggestions that Natufian groups had initiated the process of human control over cereal crops (Gebel 1984: 7) seem well-founded.

At the present time the elaborate artwork and burial practices known from Palestinian Natufian sites such as 'Ain Mallaha (*DBSup* 8: 372–81) and el-Wad (Garrod and Bate 1937: 9–19) are not well represented in Jordan, but the carved stone "wall" decorations at Wâdī Hammeh 27 (Edwards et al. 1988) and a possible Natufian cemetery near Tabaqa along the Wâdī el-Hasa (Rollefson in MacDonald et al. 1983: 316) offer promise for similar artistic and ritual parallels.

E. Neolithic Period (ca. 8500–4000 B.C.)

The Neolithic developments in the Near East represent a continuation of Late Epipaleolithic trends in increasing

cultural control of wild resources. This relatively long period of economic and social transformations has been subdivided into five phases: the aceramic Neolithic consists of Pre-Pottery Neolithic A or PPNA (ca. 8500–7500 B.C., the Pre-Pottery Neolithic B or PPNB (ca. 7500–6000 B.C.) (Kenyon 1979; cf. Moore 1982), and the Pre-Pottery Neolithic C or PPNC (ca. 6000–5750 B.C.). Pottery manufacture became established in the 6th millennium and characterizes Pottery Neolithic A or PNA (ca. 5500–4750 B.C.) and Pottery Neolithic B or PNB (ca. 4750–4000 B.C.). These dates are tentative, however, since very few reliable absolute dates are available for ceramic Neolithic developments (cf. Weinstein 1984: 304–5).

1. PPNA Phase (ca. 8500–7500 B.C.). The earliest Neolithic phase has been tentatively identified at only one site in Jordan, at Sabra 1 near Petra (Gebel 1983). By contrast, Syria (Moore 1975) and Palestine have a considerable number of PPNA sites (e.g., Kenyon 1979; Bar Yosef, Gopher, and Goring-Morris 1980; Noy, Friedman, and Burian 1981; Ronen and Lechevallier 1985). During this period sites reflect a great degree of variation in size and inferred population, and permanent village settlement was made possible by the agricultural contributions of wheat and barley species. No definite indications of animal husbandry are known from PPNA sites, for animal bone reflects only hunted species.

2. PPNB Phase (ca. 7500–6000 B.C.). In contrast to the relative scarcity of PPNA sites in the Near East, permanent villages of the PPNB period are numerous throughout the area; and Jordan reflects this regional growth very well. Farming settlements range in size from only a few acres at the hamlet of Khirbet Hammam (Rollefson and Kafafi 1985), to medium-sized villages at Beidha (Kirkbride 1966) near Petra and Shuʿeib (Rollefson fc. c), above the Jordan valley, to enormous townlike expanses of 30 acres or more at Basta in S Jordan (Gebel et al. 1988) and ʿAin Ghazal near Amman (Rollefson and Simmons 1986). Permanent settlements were founded in areas with sufficient rainfall to support farming, and the domestication of goats contributed to the animal protein in the diet of PPNB peoples (e.g., Köhler-Rollefson and Rollefson 1987). Smaller temporary camps and settlements were scattered in large numbers throughout the more arid parts of Jordan, including the S steppes and plateaus (MacDonald et al. 1983; Rollefson fc. a) and E steppes and deserts (Betts 1986; Waechter and Seton-Williams 1938; Garrard, Byrd, and Betts 1986).

PPNB architecture was solid, roomy, and sophisticated (Banning and Byrd 1984, fc.). Burial practices are well documented at Beidha (Kirkbride 1966), Basta (Gebel et al. 1988), and especially at ʿAin Ghazal (Rolston in Rollefson et al. 1985; Rollefson 1983b, 1986). The plastered-skull cult manifested so dramatically at Jericho (Kenyon 1979: 34–36) is known in Jordan only at ʿAin Ghazal (Rollefson 1983b). Small clay figurines of humans and animals are numerous in PPNB sites; and they appear to have fertility and "luck" connotations in many cases, although there is strong evidence that a "cattle cult" may have had important religious significance (Köhler-Rollefson 1985; McAdam pers. com.; Rollefson 1986: 50).

Perhaps the most impressive feature of the PPNB period is the elaborate human statuary found at Jericho (Garstang 1935: 166–67) and more recently at ʿAin Ghazal (Tubb 1985; Rollefson and Simmons 1988). It is likely that the statuary is connected with ancestor worship, although on a larger scale than the family orientation suggested for the plastered-skull cult (Tubb and Rollefson fc.).

The closing centuries of the PPNB period have posed a major problem to scholars interested in the Neolithic of the Levant. Throughout S Lebanon, S Syria, Palestine, and Jordan there was a consistent abandonment of farming villages by the end of the 7th millennium; some of the villages had been continuously occupied for more than 2000 years. Although some pollen evidence had supported the interpretation of a regional decrease in rainfall, recent research has strongly challenged this conclusion (van Zeist 1985: 201). Furthermore, ʿAin Ghazal did not suffer this fate until well into the 6th millennium (ca. 5750 B.C.), and the site's location at the border of rainfall farming indicates that climatic patterns did not deteriorate to levels incapable of sustaining dry farming.

An alternative hypothesis has been developed that entails the basic incompatibility of agriculture and goat herding (Köhler-Rollefson 1985) and the added impact of systematic deforestation for architectural requirements (Rollefson fc. d; Köhler-Rollefson and Rollefson 1987): in essence, PPNB populations simply degraded the environment around permanent settlements (and attendant sources of water) to such an extent that permanent occupation by even relatively small populations was no longer possible.

3. PPNC Phase (ca. 6000–5750 B.C.). While all of the known PPNB villages in the S Levant became deserted by ca. 6000 B.C., with the possible exception of Tell Ramad, near Damascus (de Contenson and van Liere 1966), the settlement at ʿAin Ghazal continued to prosper and even grow for another few centuries. But the ecological pressures suffered by its sister settlements were also felt at ʿAin Ghazal; and major changes in architecture, subsistence economy, lithic technology, and ritual all reflect a distinctive cultural character that has been called the PPNC phase (Rollefson and Simmons 1988; Köhler-Rollefson and Rollefson 1987). Evidence of agricultural practices was poorly preserved, but there are clear indications that expanded animal husbandry (including goats, cattle, pigs, dogs, and perhaps sheep) was supplemented by hunting expeditions into nearby steppe and desert regions to the E. Although ʿAin Ghazal remained a huge permanent settlement, there are suggestions that a sizable proportion of the population may have lived there on a seasonal basis in cadence with the development of seminomadic pastoralism (Köhler-Rollefson 1985).

4. Pottery Neolithic A Phase (ca. 5500–4750 B.C.). The absence of permanent settlements in Palestine, S Syria, and Jordan (except ʿAin Ghazal) appears to have lasted until sometime in the latter half of the 6th millennium, when some sites were eventually resettled on a permanent basis (e.g., Jericho [Kenyon 1979] and Munhata [Perrot 1966]) and new ones were established. In Jordan several new permanent villages or hamlets of small size were founded in the N (Kafafi 1985; Gebel and Muheisen 1985) and S (Bennett 1980). ʿAin Ghazal also witnessed resettlement, but in view of the unsubstantial architecture, habitation appears to have been only on a temporary, probably sea-

sonal basis that coincided with nomadic pastoralism (Rollefson and Simmons 1986; Köhler-Rollefson and Rollefson 1987). The known permanent settlements in Jordan are near small-flow springs outside the traditional PPNB area, and farming and hunting appear to have been the mainstays of these hamlets. The production of well-made pottery, with characteristic Yarmoukian features (Stekelis 1972), is found on all W Jordanian sites of this period. Overall, the absolute population of the region seems to have declined markedly, although activity in the steppes and deserts of E Jordan may have supported considerable populations of nomadic and seminomadic pastoralists and hunters (Betts 1986). Many of the enigmatic "burin sites" of E and S Jordan may date from this period of increased exploitation of arid lands, but little reliable dating evidence is available to substantiate this interpretation (but see Rollefson 1988).

5. Pottery Neolithic B Phase (ca. 4750–4000 B.C.). This period of Neolithic development is known from several sites in Palestine, including Jericho (Kenyon 1979); but to date no parallels have been found in Jordan. Ceramic innovations and the reestablishment of substantial architecture set this phase apart from the PNA at Jericho, and the phase appears to merge into later Chalcolithic developments. Indeed, it may be the case that Tuleilat Ghassul (cf. Hennessy 1969), a substantial village across the Jordan valley from Jericho, may include a transition from the final Neolithic to earliest Chalcolithic phase. Other PNB sites may exist in Jordan, but if this is the case, they may be buried beneath some of the larger tells in the N part of the country such as Pella (cf. Rollefson fc. e) and Tell Husn, near Irbid (C. Johnson, pers. com.).

GARY O. ROLLEFSON

JORIM (PERSON) [Gk *Iōrim*]. The father of Eliezer and son of Matthat according to Luke's genealogy tying Joseph,

the "supposed father" of Jesus, to descent from Adam and God (Luke 3:29). Jorim is omitted in D, which substitutes a genealogy adapted from Matt 1:6–15 for Luke 3:23–31; and 2 Esdr 10:18 B reads Gk *Iōreim,* as one of the sons of the priests who married foreign women, in proximity to Gk *Eliezer.* The name Jorim occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of 18 otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke I–9* AB, 501). Kuhn (1923: 208–9) argues that two seemingly parallel lists of names—Luke 3:23–26 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha)—were originally identical, the first perhaps reflecting a Hebrew context and the second, in an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). However, Jorim, in the second list, does not have a corresponding name in the first list.

STANLEY E. PORTER

JORKEAM (PLACE) [Heb *yorqĕʿām*]. A village in Judah occupied by the Hebronite clan of Caleb (1 Chr 2:44). The formula "x the father of y," used throughout the list in which this name appears, leaves the impression that the names are those of persons, though here the Chronicler uses it to denote places (y founded by x). The LXX^B is quite possibly correct in reading Jokdeam in place of Jorkeam, so linking the place with the Jokdeam of Josh 15:56. The location, in either case, is set in the hill country of Judah, quite near Hebron.

ELMER H. DYCK

JOSECH (PERSON) [Gk *Iōsēch*]. The father of Semein and son of Joda according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:26). There is some textual uncertainty here. Greek *Iōsēch* is read in numerous Gk mss and several early versions, but Gk *Iōsēph* is read in other mss, the Vulgate, and the TR (Tischendorf). Josech is omitted in D, which substitutes a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. The name Josech falls within a list of 17 ancestors of Jesus who are otherwise unknown in the biblical documents, including Matthew's genealogy (Fitzmyer *Luke I–9* AB, 500); and is not remotely similar to any of the names in 1 Chr 3:19–20.

STANLEY E. PORTER

JOSEPH (PERSON) [Heb *yôsēp*]. Several persons in the OT, Apocrypha, and NT bear this name.

1. See JOSEPH, SON OF JACOB.

2. The father of Igal, the individual selected from the tribe of Issachar to spy out the land of Canaan (Num 13:7).

3. A Levite who was one of the "sons of Asaph" (1 Chr 25:2, 9).

4. One of the Israelites who, at the time of Ezra, had married a foreign wife (Ezra 10:42 = 1 Esdr 9:34).

5. A priest during the postexilic period, at the time when Joiakim was high priest (Neh 12:14).

6. Ancestor of Judith, who is the heroine of the deuterocanonical book of Judith (Jdt 8:1). The heroine is introduced immediately with what the writer considers most important, that is, her Jewish lineage. With a list of at least 16 ancestors, this genealogy is the longest for all women given in the Bible. Of the Hebrew names mentioned, only the three most distant, Salamiel, Sarasadai, and Israel, may likely refer to well-known historical persons. There is no specific information about the identity of the others listed. If the genealogy is authentic, there are obviously many omissions; but since the book of Judith is generally considered to be a novelette, the genealogy may well be fictitious. However, the use of a genealogy in introducing a significant person in salvation history is consistent with biblical tradition and emphasizes the importance in the mind of the writer of belonging to this people. There are various scholarly opinions about this genealogy, but none establishes certainty (Moore *Judith* AB, 185–88).

7. Son of Zechariah and a commander in Judea (1 Macc 5:18) during the period when Judas Maccabeus was in control of the territory (164–161 B.C.E.). Reports of repression of Jews by Gentiles in Gilead and Galilee brought Judas and Jonathan to march on Gilead with a force of 8000 and their brother Simon with 3000 to Galilee (5:20). Joseph, son of Zechariah, and Azariah, a leader of the people, were left in Judea with the rest of the forces to guard it. They were expressly instructed not to engage in battle with the gentiles until the return of Judas and Simon (5:18–19). When the Maccabee brothers were known to have subdued the territories and brought the oppressed Jews to Judea for safety, Joseph and Azariah ignored orders and launched a campaign against Jamnia, where they were severely routed and suffered great losses (5:55–62). The writer of the account uses the opportunity to indicate that deliverance was to come through the family of the Maccabees (*HJP*^{2} 1: 164–65).

8. One of the Maccabee brothers in the epitome of Jason of Cyrene (2 Macc 8:22). The five-volume history, which was the work of Jason, is now lost; but his abridgment of it is available to us as 2 Maccabees. This parallels 1 Maccabees 1:10–7:50. The writer of 1 Maccabees names the sons of Mattathias as John, Simon, Judas, Eleazar, and Jonathan (1 Macc 2:2). Jason of Cyrene speaks of "Joseph" instead of "John" among the five brothers (2 Macc 8:22). The passage in 2 Maccabees is difficult for at least two reasons. The army is divided into four parts, leaving Eleazar without forces. Also, the transferral of the name "Joseph" for "John" raises questions. Goldstein attempts an understanding of the text which could see Joseph, son of Zechariah, and also Azariah (1 Macc 5:18) as half-brothers of the five sons of Mattathias (*2 Maccabees* AB, 299–300). See #7. Thus Joseph and John would be two different persons, and there would be seven brothers in all. Others simply see Joseph as a variant for John, and thus the number of brothers would remain at five (RSV 2 Macc 8:22 n.).

BETTY JANE LILLIE

9. See JOSEPH, HUSBAND OF MARY.

10. The reported "brother" of James, and Simon, and

Judas, and Jesus and possibly the son of Mary, the mother of Jesus (Matt 13:55). There is much textual variance at this point, although Gk *Iōsēph* receives a B rating in *UBSGNT* (for variant readings see *NovTG*[26]). Mark 6:3 in a similar list (cf. 15:40, 47; see below #11) has Gk *Iōsētos*, though with significant textual variants, for Gk *Iosē* and a few for *Iōsēph* (again see *NovTG*[26]). If it is true, as many scholars believe, that Gk *Iosēs* follows the Galilean pronunciation of the Heb *ywsp*, then, on the basis of this factor and other significant contextual features, Matt 13:55 and Mark 6:3 may be parallels at this point (see e.g., Swete 1898: 107). There are three major views about the status of Joseph and the others as "brothers" of Jesus. The Hebrew or Aramaic word for "brother" has a wide enough semantic range to allow that these may be half-brothers of Jesus by way of a previous marriage for Joseph, Jesus' "supposed father" ("Epiphanian" view, now rarely held); or they may be cousins of Jesus as sons of Mary's sister, possibly named Mary wife of Clopas ("Hieronymian" view); or they may be the actual physical brothers of Jesus and sons of Mary by Joseph ("Helvidian" view). The first view is often associated with an Orthodox perspective; the second with a Roman Catholic perspective (e.g., McHugh [1975: 200–253], who gives a thorough treatment of the issues, although he proposes a fourth solution with three different Marys); and the third with a Protestant perspective (e.g., Mayor 1897: v–vlvii), although this is not always the case (cf. Lightfoot 1856: 256–91, who was an Epiphanian). In light of other references to Jesus' brothers, especially in the Greek-language environments of 1 Cor 9:5; Gal 1:19; Acts 1:14; and John 2:12; 7:2–8, and on biblical rather than problematic theological criteria, it is most plausible to see Joseph here as an actual brother of Jesus and the son of Mary by Joseph (e.g., Hill *Matthew* NCB, 222). Regardless of his familial relations, nothing more is known of this Joseph than his possible citation in Matt 27:56 (#11 below).

11. The reported "brother" of James and son of a woman named Mary, one of the three women watching the crucifixion (Matt 27:56). There is much variance in the Greek mss. Some mss read *Iōsēph* while others read *Iōsē;* and there are slight variations in syntax, including a reading which adds another Mary. At Mark 15:40 and 47 there are variants for Gk *Iōsētos* and *Iōsē,* and a few for *Iōsēph* (cf. Mark 6:3 in #10 above). Whereas most scholars are agreed that Mark 15:40 and 47 refer to another Mary (probably the wife of Clopas) and her son, on the basis of citation of James as "the younger" and the unclear means of reference concerning whether it is Mary the mother of Jesus (contra Gundry 1982: 579), the major question is whether the Joseph of Matt 27:56 is the same Joseph as the one in Matt 13:55. Some believe that Matt 27:56 refers to an undetermined Mary with two otherwise unknown children (Hill, 356); others assert that this Mary is the "other Mary" of Matt 27:61 and 28:1 (Schnackenburg 1987: 282); others equate this Mary with Mary the wife of Clopas in John 19:25 (McNeile 1915: 425; Brown 1978: 69); and still others believe that this Mary, James, and Joseph are the same as in Matt 13:55 (McHugh 1975: 241), although it does not necessarily follow that Joseph is a son of Mary the mother of Jesus. Regardless of his familial relations, nothing more is known of this Joseph than his possible citation in Matt 13:55 (#10 above).

12. The father of Jannai and son of Mattathias according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:24). This Joseph is omitted by D, which substitutes a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. This Joseph falls within a list of 17 ancestors of Jesus who are otherwise unknown in the biblical documents, including Matthew's genealogy (Fitzmyer *Luke I–9* AB, 500), except for Luke 3:30 and reference to Joseph, the "supposed father" of Jesus. Kuhn (1923: 208–9) believes that the two Josephs of Luke 3:24 and 30 were originally identical, both derived from a common list that subsequently formed the basis for two parallel lists in Luke's genealogy: 3:26–29, Jesus to Mattathias; and 3:29–31, Joshua/Jesus to Mattatha; the first perhaps reflecting a Hebrew context and the second, in an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). This proposal has not proved convincing to most scholars.

13. The father of Judah and son of Jonam according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:30). This Joseph is omitted by D, which substitutes a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. This Joseph falls within a list of 18 ancestors of Jesus who are otherwise unknown in the biblical documents, including Matthew's genealogy (Fitzmyer, 501), except for Luke 3:24 and reference to Joseph, the "supposed father" of Jesus. Although Jeremias (1969: 296) believes that it is anachronistic for Luke to include this name here, since it first appears as a personal name in the postexilic period (e.g., Ezra 10:42; Neh 12:14; 1 Chr 25:2, 9), caution must be exercised in light of the limited nature of the available evidence and the possibility that 1 Chronicles is historically reliable at this point. See above (#12) on Kuhn's proposal.

14. See JOSEPH OF ARIMATHEA.

15. The unsuccessful of two followers of Jesus, the other being Matthias, from whom the replacement apostle for Judas was chosen, also called Barsabbas and surnamed Justus (Acts 1:23). This Joseph is distinguished from others named Joseph by his patronymic in Aramaic meaning either "son of the Sabbath" or "son of the elder" (D pc read Gk *Barnaban,* obviously confused with Joseph called Barnabas in Acts 4:36; see #16 below). Following the custom of many Jews of the time, he also had a Latin name, Justus, resembling his Jewish name (cf. Matt 16:17; Acts 13:9; 17:5), probably used in his dealings with gentiles. This Joseph is not the Judas Barsabbas of Acts 15:22. Nothing further is known of him, except that Eusebius (*Hist. Eccl.* 3.39.9–10) records a legend of Papias from the daughters of Philip that Joseph "drank poison but by the Lord's grace suffered no harm."

16. A Levite from Cyprus and member of the Church of Acts who sold a field and brought the proceeds to the apostles; also known as Barnabas, which is said to mean "son of encouragement" (Acts 4:36). Greek *Iōsēs* is read in C Majority and syr^{h}, but Gk *Iōsēph* is clearly the correct reading. There have been various explanations of how "son of encouragement" is derived from Barnabas (see Brock 1974). This significant individual in the history of the Church (not to be confused with Joseph Barsabbas in

Acts 1:23; see #15 above) is known by the name Barnabas elsewhere in the NT. See also BARNABAS.

STANLEY E. PORTER

JOSEPH AND ASENETH. An apocryphal Jewish romance which recounts the conversion of the gentile Aseneth to the God of Israel, her marriage to the patriarch Joseph, and the conflicts surrounding that conversion and marriage. The story is a midrashic elaboration of Gen 41:45, 50–52; and 46:20, which briefly mention Joseph's marriage to Asenath (LXX Aseneth), daughter of Potiphera (LXX Pentephres), priest of On (Heliopolis).

After much neglect by biblical scholars because of the 5th-century date and the Christian character assigned to the apocryphon in several early publications (Batiffol 1889–90: 7–18, 30–37), *Joseph and Aseneth* is now recognized to be a Jewish composition from around the turn of the eras (Burchard 1965: 99–106, 143–51). For this reason it is often included in the OT Pseudepigrapha and is considered significant for the study of early Judaism and Christian origins.

A. Contents

The story falls into two parts. The first, chaps. 1–21, begins with Aseneth, the exceptionally beautiful virgin daughter of Pentephres, priest of Heliopolis and chief nobleman of pharaoh, voluntarily secluded in her ornate quarters in order to avoid the many suitors who seek her hand in marriage. When Joseph, who is touring Egypt to gather grain, announces plans to dine in the house of Pentephres, Aseneth arrogantly refuses her father's suggestion that she be given to Joseph in marriage. When Joseph arrives, she is so impressed with his beauty that she changes her mind and falls madly in love with him. However, Joseph spurns her because, in his words:

> It is not proper for a man who worships God, who blesses with his mouth the living God and eats blessed bread of life and drinks a blessed cup of immortality and is anointed with blessed ointment of incorruption, to kiss a strange woman, who blesses with her mouth dead and dumb idols and eats from their table bread of strangling and drinks from their libation a cup of deceit and is anointed with ointment of destruction. (8:5)

After praying for Aseneth's conversion, Joseph leaves, promising to return in a week. In the meantime Aseneth repudiates her idols and penitently turns to the God of Israel. She is then visited by a "man from heaven," who announces the heavenly acknowledgment of her conversion and describes the blessings that now accrue to her. Foremost among these are life and immortality, in which Aseneth participates symbolically by eating a mysterious honeycomb, which is said to be the same immortal food as that eaten by the angels in paradise. When Joseph returns, he greets and kisses the gloriously transfigured Aseneth. The couple is married by pharaoh amid elaborate festivities, and from their union are born Manasseh and Ephraim.

In the second part of the story, chaps. 22–29, pharaoh's son becomes jealous of Joseph and enlists the aid of Joseph's brothers, Dan, Gad, Naphtali, and Asher, to murder Joseph and abduct Aseneth. The plot fails because of timely divine intervention and the efforts of some of Joseph's other brothers, especially Simeon, Levi, and Benjamin. Pharaoh's son is mortally wounded during the conflict; and when the grief-stricken pharaoh also dies, Joseph becomes king of Egypt.

B. Text

Joseph and Aseneth is extant in 16 Greek manuscripts and numerous versional witnesses. Of the two principal forms of the story, one about two-thirds as long as the other, the longer form lies closer to the original in the judgment of most specialists (Burchard 1970: 3–34), although a number of modern studies and translations have been based on the short recension (Philonenko 1968: 125–226) because of the lack of a critical edition of the long text.

C. Original Language

Joseph and Aseneth was almost certainly composed in Greek. Semitisms abound, but these reflect strong Septuagintal influence and are no more than should be expected from Greek-speaking Hellenistic Judaism. The significance of the word play on the name Aseneth in 15:7 is not apparent in Greek, but attempts to explain this word play in Hebrew and Aramaic are themselves problematic and would not in any case prove the existence of a Semitic original. Frequently used words which have no Semitic equivalents, such as *athanasia,* "immortality" and *aphtharsia,* "incorruption" are among the compelling evidences for a Gk original.

D. Religious Character

The once-predominant view that *Joseph and Aseneth* is a Christian composition has given way to the consensus that the work is Jewish. Although some scholars maintain that there are a few Christian interpolations (Holtz 1968: 482–97), the work is devoid of any distinctively Christian traits while being replete with elements which have strong affinities in Hellenistic Judaism.

In spite of the consensus that *Joseph and Aseneth* is Jewish, attempts to relate the Judaism reflected in the work to one of the known Jewish groups of the time have been unsuccessful. Alleged points of contact with the Essenes, Therapeutae, Merkabah mystics, and gnostic groups are overshadowed by more fundamental differences. Similarly, the

superficial parallels which some have noted between Aseneth's conversion and mystery initiation do not justify the claim that the Judaism represented in the work was shaped appreciably by the mystery religions.

The type of Judaism represented in *Joseph and Aseneth* existed in dynamic tension with gentiles and struggled to maintain a distinctive Jewish identity. Table fellowship and intermarriage with gentiles, including the marriage of a convert and a born Jew, were live issues. Conversion to Judaism carried the possibility of ostracism from former gentile family and associates. The story seems also to reflect considerable discord within the Jewish community centering on the perception of the convert. Since it is these sociological dimensions of conversion to Judaism that are central and determinative in shaping the narrative, it is more difficult than many have supposed to extrapolate the ritual formalities and theological understanding of conversion for purposes of history-of-religions comparisons (Chesnutt 1988: 21–48). The curious juxtaposition of blatant syncretism with an explicit concern to resist assimilation compounds the problem of characterizing the Judaism reflected in *Joseph and Aseneth.*

E. Provenance

The apocryphon seems to have been composed in Egypt. The pervasive tension between Jews and Egyptians and between the God of Israel and the Egyptian gods is developed in such a way as to suggest that the Egyptian setting of the story was dictated not merely by the biblical framework, but also by the milieu in which the author and his community actually lived. In addition, Egyptian elements are discernible in various individual motifs. For example, contemporaneous perceptions of the Egyptian goddess Neith seem to have influenced the portrayal of Aseneth at some points.

F. Date

The extensive dependence of *Joseph and Aseneth* on the various parts of the LXX (Delling 1978: 29–56) indicates a date of composition no earlier than ca. 100 B.C. Since the story reflects a time when there was concern about and a realistic possibility of gentile conversions to Judaism, it must have been written before the measures against Judaism which Hadrian imposed at the time of the Second Revolt in A.D. 132–35. If an Egyptian provenance is assumed, *Joseph and Aseneth* must have been written prior to the period A.D. 115–17, during which the Jewish pogrom under Trajan resulted in the virtual annihilation of Egyptian Jewry. A more specific date within these broad limits is difficult to determine, but the conciliatory attitude toward gentiles fits better before than after A.D. 70, and in Egypt such an outlook fits better before than after the pogrom against Alexandrian Jews in A.D. 38. The absence of reference to the Romans and the depiction of Egypt as an independent country with rulers favorably disposed toward Jews may reflect the Ptolemaic period in Egypt before the Roman takeover in 30 B.C., but this is by no means certain.

G. Readership and Purpose

Although some have understood *Joseph and Aseneth* as missionary propaganda designed to win gentiles to the Jewish faith, the author's assumption that his readers are familiar with the patriarchal narratives and can understand other allusions to Scripture makes it more likely that he envisioned a readership primarily Jewish or at least of those who already stood very close to Judaism. Moreover, his repeated use of the formula "it is not proper for a man (woman) who worships God to . . ." (8:5, 7; 21:1; 23:9, 12; 29:3) and his other ways of defining the conduct befitting "those who worship God" (23:10; 28:5, 7) are clearly directed inward, to Jews, and not outward.

Not even the polemic against idolatry indicates that the work was written for gentiles. Jews themselves needed to be reminded of their distinctiveness vis à vis gentiles and of the danger of assimilation to gentile religion and culture. Moreover, Jews who were less than accommodating toward gentile converts and who doubted the propriety of marriage to converts needed reassurance that true conversion entailed the utter repudiation of idols and therefore that marriage to a convert was no concession to idolatry. Such intramural concerns seem best to account for the detailed narrative of Aseneth's renunciation of idolatry and everything associated with it. There is no indication that this critique of idolatry is calculated to attract outsiders.

The exalted estimation of the convert in *Joseph and Aseneth* suggests that one of the primary purposes of the work was to enhance the status of converts within the Jewish community (Chesnutt 1988: 37–43). Through the story the author shows that converts to Judaism are beneficiaries of all the blessings and privileges of the people of God and that as such they are to be received fully into the community of Israel and are suitable mates for Jews. The author even has God's own chief angel appear in the story to provide heavenly endorsement of the conversion and marriage of the prototypical proselyte.

At the same time the author is obviously concerned to extol Jewish life and religion and to warn against exogamy and idolatry, perhaps in order to show that the openness to gentile converts is no concession to pagan idolatry and its corrupting effect and no threat to a distinctive Jewish self-identity. Since Aseneth was unacceptable as a wife for Joseph until she renounced her idols, her story entails no concession to idolatry. Similarly, opposition to exogamy is not abandoned but confirmed in the story; Aseneth could marry a "son of God" only because she had become a "daughter of the Most High" (6:3, 5; 18:11; 21:4). Neither does full acceptance of the convert entail any diminution of the blessed status enjoyed by Jews as the people of God; these blessings are in fact affirmed and articulated at great length in *Joseph and Aseneth,* but with the emphasis that the Jew by conversion participates in them every bit as fully as the Jew by birth. Membership in the people of God according to this apocryphon is not even determined by ethnic descent but by acknowledgment of the true God and is characterized by "proper" conduct. Thus the true convert is on equal footing with the Jew by birth, and the latter must avoid the contamination of idols and engage in "proper" conduct in order to retain God's favor. "Proper" conduct is defined to include not only the avoidance of gentile impurity but also the treatment of both Jews and gentiles with magnanimity and respect in situations of conflict (8:5; 21:1; 23:9, 12; 29:3; see also 28:5, 14).

H. Special Problems

Among the most interesting and problematic features of *Joseph and Aseneth* are the formulaic references to the bread of life, cup of immortality, and ointment of incorruption (8:5–7, 9; 15:5; 16:16; 19:5; 21:21). These have most commonly been supposed to reflect some sort of sacred meal, perhaps related to the sacred meals attested in other ancient sources. A minority view is that the reference is not to a ritual meal at all but to the everyday Jewish meal, which itself had a solemn religious character, or to the entire Jewish way of life. Aseneth never actually receives any bread, cup, or ointment anywhere in the narrative; instead, she eats a piece of honeycomb and is then said to have eaten bread of life, drunk a cup of immortality, and been anointed with ointment of incorruption. The honeycomb probably represents manna; in any case both the honeycomb and the triadic formula with which it is equated symbolize the access to life which is the unique privilege of those who worship the God of Israel.

The triad of bread, cup, and ointment is reminiscent of the biblical formula "grain, wine, and oil" and, like that formula, summarizes the staples of Jewish life. Moreover, food, drink, and oil are precisely those items regarded in Jewish tradition as most susceptible to impurity by association with idolatry. Therefore whether the triadic formula in *Joseph and Aseneth* echoes some special Jewish ritual which is set over against pagan rites or simply originated in the peculiarly Jewish use of the staple commodities of life in contrast to the defiling food, drink, and oil of the gentile world, it certainly functions as a representative expression for Jewish life in a gentile environment.

The episode involving the bees in 16:17–23 is notoriously enigmatic. The incident serves to accentuate the importance of the honeycomb as a symbol of life and immortality, and the miraculous appearance and disappearance of the comb and the bees at the command of the man from heaven function to confirm the veracity of this heavenly visitor's pronouncements to Aseneth, but the symbolism in the description of the bees and their strange behavior has defied explanation.

Investigation into the history-of-religions affinities of this apocryphon and its significance for the study of Christian origins continues. Expressions such as "son of God," "bread of life" (cf. John 6), and "cup of blessing" (cf. 1 Cor 10:16); theological ideas such as the conceptions of God, sin, repentance, and salvation; images of conversion such as new creation and emergence from death to life; and liturgical and paraenetic patterns such as the prayers and the "then-now" paradigm illustrate the significance of *Joseph and Aseneth* for the study of the NT and Christian origins.

RANDALL D. CHESNUTT

JOSEPH OF ARIMATHEA. A reportedly good, righteous, and rich member of the Sanhedrin, who was expecting the kingdom of God and had become a follower of Jesus and who received from Pilate the body of Jesus for burial in his own tomb (Mark 15:43, 45; Matt 27:57, 59; Luke 23:50–51; John 19:38).

Two issues arise when discussing Joseph of Arimathea. First is the location of Arimathea. New Testament Arimathea is probably to be identified with the Judean city W of the hill country of Ephraim and NW of Jerusalem known in Hebrew as Ramah, Ramathaim-zophim, or Rathamin (see Rogerson NAB, 148; Fitzmyer *Luke 10–24* AB, 1526), although Eusebius places it near Lydda to the SW (*Onomast.* 144.28; cf. 1 Macc 11:34; Josephus *Ant* 13.127). This city, which played a part in the life of Samuel and his parents (1 Sam 1:1, 19; 2:11; 7:17; 8:4), is specified as a "Jewish

town" by Luke (23:50), possibly to help non-Jewish readers (Marshall *Luke* NIGTC, 880). The Greek text at Mark 15:43 and John 19:38 allows the interpretation that when Jesus' crucifixion took place, Joseph came directly "from Arimathea" to participate in the events surrounding it (if the prepositional phrase modifies the verb of motion) or, more likely, that he was originally from the city of Arimathea and presumably now living elsewhere, probably in Jerusalem (if the prepositional phrase modifies the name Joseph). The textual variant in Mark 15:43 and John 19:38, with the word *the* before the prepositional phrase *from Arimathea* (see NovTG[26]) argues for the latter interpretation.

The second and more important issue regarding Joseph of Arimathea is the motivation for his act of burial (see Broer 1972: 175–83, 190–98; esp. Brown 1988). Schreiber (1981) has recently focused upon the redactional differences among the gospel accounts with Mark emphasizing Joseph as the renowned leader of the Jews, Matthew as the disciple of Jesus, Luke as the Sanhedrin member, and John as a disciple fearful of the Jews. This description raises several crucial questions which must be decided before Joseph's motivation can be determined. First, there is the question of whether Joseph was a member of his local village council or whether he was a member of the Jerusalem Sanhedrin. According to Mark 15:43 he was a "respected" (see Swete 1898: 369 on *euskēmōn*) or possibly "rich" member of a council, and according to Luke 23:50 he was a good and just man. Although the term used for "council" in Mark 15:43 and Luke 23:50 was probably not a technical term at this stage in its usage (see Taylor 1959: 600; followed by Broer, 1972: 175–77, who states that even though Luke believes Joseph was a member of the Sanhedrin, Mark does not make this indication; cf. Lührmann *Markusevangelium* HNT, 267), four facts argue that he was a member of the Jerusalem council: (1) he appears to have been a wealthy landowner (Matt 27:57; Jeremias 1969: 96; some scholars think Matthew inserted this on the assumption that such an important figure would have to be wealthy; McNeile 1915: 426; cf. Barrick 1977); (2) he reportedly did not consent in the decisions or actions regarding Jesus (Luke 23:51; see Fitzmyer, 1526); (3) the word for council, used with reference to the Sanhedrin by Josephus (*JW* 2.405), is not modified to specify any other than the one in Jerusalem (see Marshall, 879); and (4) he is associated with Nicodemus, a member of the Jerusalem Sanhedrin (John 19:39; Brown *John 13–21* AB, 939).

The second factor is Joseph's relation to Jesus. Mark 15:43 and Luke 23:50 say that he was looking forward to the kingdom of God, which would not distinguish him from many other Jews of the time, especially the Pharisees. Matthew (27:57) goes further and specifies that he "was a follower" of Jesus (there is a textual variant here which does not affect this point), although possibly a secret one (see John 19:38, with the term *disciple*, although on the basis of textual variants regarding who came to take the body, Murphy-O'Connor [1974: 266–67] believes that Joseph is a later interpolation in the story; contra Brown *John 13–21* AB, 938; cf. Curtis 1972: 442–43). The facts that Joseph reportedly was involved in Jesus' burial, that Matthew does not limit discipleship exclusively to the Twelve, and that instruction of the disciple probably entailed acceptance of the coming kingdom give witness to his being more than a passive observer of Jesus (Wilkins 1988: 160–67; contra Bonnard *Matthieu* CNT, 408–9; cf. Brown [1988: 240–44], who believes that Joseph could have acted simply out of pious motives as a faithful member of the Sanhedrin).

A third factor is the prescriptions in Jewish law regarding the burial of bodies. According to Roman law execution signaled the sacrifice of all of the victim's earthly possessions and left the right of burial only to the good favor of the magistrate, although the body was often released to relatives. Jewish law on the contrary held that burial was a duty to be performed even for enemies (Jos. *JW* 3.361ff.), and according to Deut 21:23 and rabbinic law the body was not to hang on a cross after sundown (see Lane *Mark* NICNT, 577–78; Brown 1988: 234–38 for details). Joseph, as a leader of the Jews, and out of respect for Jewish law, especially in light of his apparent dissent from the voting for Jesus' execution (Luke 23:51), and possibly as a favor to Jesus' followers and as a friend of Pilate (*Gospel of Peter* 2.3), felt compelled to request from Pilate the right to bury him. But this motive faces the difficulty of why Joseph would have risked ceremonial uncleanness (*ISBE* 2: 1131; perhaps servants helped him; see Brown *John 13–21* AB, 940), to say nothing of his political and religious careers (John 19:38; cf. Mark 15:43, where Joseph "took courage" to go to Pilate), for such a criminal as Jesus. As depicted in the Gospels, Joseph at the least probably felt that Jesus' message of the coming of the kingdom warranted this one final act of devotion (Gould *Mark* ICC, 297–98), with Matthew seeing this as a further sign of Joseph's being a follower. The NT documents agree that Joseph, with help from others (though no family members), prepared and laid Jesus' body in a tomb and rolled a stone across the opening. John 19:41 states that the new tomb was in a garden near the place of crucifixion. The fact that the tomb was unused by members of his family may indicate that Joseph had recently come from Arimathea and possibly had made his fortune in Jerusalem, with his family tomb still in his village of origin, although the special circumstances of Jesus' death as a criminal may have required a special tomb (see Kee *IDB* 3: 980).

STANLEY E. PORTER

JOSEPH OF ARIMATHEA, NARRATIVE BY. See VIRGIN, ASSUMPTION OF THE; PILATE, ACTS OF.

JOSEPH, HISTORY OF. The document known as the *History of Joseph* is extant in six Greek papyrus fragments, three of which are housed in the Bodleian Library at Oxford (Lindsay 1885: 304), two in the British Museum (Milne 1927: 187–90; Denis 1970: 235–36; Kenyon 1893: 225, 227), and one in the Louvre (Ricci 1902: 431). The Bodleian fragments appear to be written in the same 6th- or 7th-century hand as those of the British Museum and thus probably originated from the same manuscript. The single fragment which is preserved in the Louvre is written in a different hand and duplicates part of the text contained in the fragments belonging to the British Museum. The Louvre fragment therefore represents a second manuscript copy of the *History of Joseph.*

The extremely fragmentary nature of the text which has survived on papyrus allows very little to be known about the document itself. The title, *History of Joseph,* is artificial, having been arbitrarily assigned to this text by H. J. M. Milne, who edited the fragments belonging to the British Museum (Milne 1927: 187). This appellation is due to the repeated occurrence of the names of the Hebrew patriarch Joseph and his father, Jacob, within the legible lines of the papyrus fragments. Mention is made also of a pharaoh, and of Joseph's brothers Reuben and Simeon, and of ten brothers collectively. Apart from such proper names and titles, the fragments of the *History of Joseph* consist of disjointed letters, words, and phrases representing a minimum of continuous text.

More information concerning the nature of this document may be deduced, however, from a comparison of the extant text of the *History of Joseph* with the corresponding passages of the biblical book of Genesis. A number of apparent points of contact between these two texts suggest that the *History of Joseph* does generally follow the story line of the biblical account of the patriarch Joseph. Discernible among the surviving fragments of the *History of Joseph* are possible references to Joseph's appointment by pharaoh to a position of authority over Egypt and his handling of the available grain before and during the famine, the confrontation between Joseph as a ruler of Egypt and his ten brothers who had come to him from Canaan to buy grain, the discussion between the brothers while in prison acknowledging the consequences of their former mistreatment of their brother Joseph, the return of nine of the brothers to Canaan and their report to their father, Jacob, concerning what had transpired in Egypt, and Jacob's lamentation about losing his son Simeon as he had formerly lost Joseph (*OTP* 2: 467).

A more precise assessment of the relationship between the biblical text and the *History of Joseph* may be obtained by closer scrutiny of the lines of the recto of fragment 227 in the British Museum (*OTP* 2: 469–70). A single biblical verse (Gen 42:29) describing the return of Joseph's brothers to Canaan and their report to their father appears to be somewhat embellished in the *History of Joseph* by the inclusion of details of a dialogue between Jacob and his sons and the emotion expressed by the father after seeing only nine sons return without Simeon. Such liberal treatment of the biblical text by the author of this pseudepigraphon and the absence of verbal agreements with the text of Genesis would seem to characterize this document as a paraphrase of the biblical story of Joseph. This would allow the *History of Joseph* to be categorized tentatively as a midrashic expansion of at least part of the OT book of Genesis.

In spite of the extreme paucity of actual text which is available for study, certain elements can be identified in the *History of Joseph* which may provide clues as to the theological orientation of this document. One of the principal themes of the surviving parts of the *History of Joseph* seems to be a tendency to elevate and thus exemplify the person of Joseph. This is demonstrated by several instances in the text where Joseph is referred to as "king of the people," "one who feeds the Egyptians," and "savior of Egypt" (*OTP* 2: 469). This observation is further supported by references to the God of Israel as the "God of Joseph," even within a context in which Joseph's father, the patriarch Jacob, is present.

Perhaps the single most distinctive characteristic of the extant text of the *History of Joseph* is the phrase "Joseph, remembering Jacob," which occurs partially at least 11 times among the surviving fragments of this document. Such an excessively high proportion of repetitions of a single phrase within so limited an amount of text indicates that this phrase must have been a central theme of at least the segment of text represented among the extant papyri of the present pseudepigraphon. It is perhaps significant that the two occurrences of the phrase "Joseph, remembering Jacob" on the recto of the Louvre fragment are immediately followed by a vacant space deliberately created by the scribe in the text of the papyrus; this could indicate a liturgical use for this document. It has been suggested that the emphasis apparently placed upon the remembrance of his father, Jacob, by Joseph might betray a Sitz im Leben in which oppression of the Jews would necessitate a stricter observance of their national and religious traditions (*OTP* 2: 469).

The parameters for dating the *History of Joseph* are established by the date of the papyri themselves and by certain affinities with earlier documents. On paleographic grounds the 6th- or 7th-century date of the papyri containing the *History of Joseph* defines the terminus ad quem for this document. Parallels with such early pseudepigrapha as the *Testaments of the Twelve Patriarchs* and *Joseph and Aseneth* raise the possibility that the *History of Joseph* may have originated at least several centuries earlier.

The *History of Joseph* shares its central theme of "Joseph, remembering Jacob" with the *Testament of Joseph* (3:3), where Joseph intimates that he was able to resist the advances of the Egyptian Potiphar's wife by remembering the words of his father, Jacob. The exaltation of Joseph, which was described above as one of the prominent themes of the *History of Joseph,* also appears to be one of the identifying characteristics of the pseudepigraphon *Joseph and Aseneth* (*OTP* 2: 469). Further indication of a possible connection between these two documents perhaps may be seen in *Joseph and Aseneth* (25:6), where Joseph is described as king, giver of food, and savior, roles which coincide with

the three principal concepts of Joseph projected in the *History of Joseph*.

GEORGE T. ZERVOS

JOSEPH, HUSBAND OF MARY (PERSON) [Gk *Iōsēph*]. The supposed father of Jesus and husband of Mary the mother of Jesus (Luke 3:23; Matt 1:16).

There are several important issues to discuss regarding Joseph, the husband of Mary. First, Joseph is mentioned in Matthew, Luke, and John but does not appear in Mark, except indirectly at 6:3 in a few manuscripts (see *NovTG*^{26}), which read "the son of the carpenter." Apart from John (1:45; 6:42), where Jesus is twice referred to as the "son of Joseph" (see Sproston 1985), Joseph is only mentioned in the birth and childhood stories about Jesus. Matthew gives the most detailed information, recounting that when Mary was betrothed to Joseph (1:18), she was found to be pregnant, and Joseph, being a "just man and unwilling to put her to shame," was going to divorce her (1:19), when an angel appeared and told him that the child was conceived of the Holy Spirit (1:20). When Joseph awoke, he took Mary as his wife (1:24). After the visit of the wise men, Joseph was again warned in a dream about a plot by Herod against his child and was commanded to take him to Egypt (2:13), where the parents and child remained until after Herod's death (2:19). Luke also mentions that Mary was betrothed to Joseph when she was told that she would conceive a son, recording that Joseph went up from Galilee with Mary to Bethlehem, "because he was of the house and lineage of David" (2:4), during Quirinius' enrollment, where the family was later visited by shepherds after the birth of the child (2:16).

The limitation of the Joseph material to Matthew and Luke has led some scholars to speculate that Joseph, possibly significantly older than Mary at the time of their marriage, died sometime after Jesus' 12th year (Luke 2:41–50) and before the beginning of his ministry. This hypothesis gains strength from the fact that Mark, mentioning nothing of Jesus' life before his baptism, nowhere mentions Joseph. The apocryphal NT documents contain other Joseph traditions which are compatible with this scenario. For example, *Prot. Jas.* 9.2 says that Joseph was an old man who already had children; and the *History of Joseph the Carpenter* records in some detail that Joseph lived to be 111 years old, having married at 40, and having been married for 49 years, and producing six children before his first wife died. He then lived with Mary for two years before Jesus' birth and would have died during Jesus' twenties.

A second issue surrounds Joseph's origin. Matthew does not mention Joseph's hometown, but Luke states (2:4) that "Joseph also went up from Galilee, from the city of Nazareth, to Judea, to the city of David, which is called Bethlehem." Matthew only mentions that Jesus was born in Bethlehem but that when Joseph brought his family back from Egypt, he was afraid to return to Judea because of the reign of Archelaus; and having been warned in a dream, he went to Nazareth in Galilee. Whereas some scholars find a persistent tension in these accounts (e.g., Fitzmyer *Luke I–9* AB, 406), choosing instead to focus exclusively on the centrality of Bethlehem, they are not inherently incompatible. It is plausible that Joseph was originally from Bethlehem, but that something, possibly his business or a family migration years earlier, resulted in his or his family's residing in Nazareth for an extended period of time, before he returned to Bethlehem for the enrollment under Quirinius (cf. *IDB* 2: 979; *ISBE* 2: 1130).

A third issue is the character of Joseph and his response to learning that Mary was pregnant. Matt 1:19 describes Joseph as "being a just man and unwilling to put [Mary] to shame," when he learned of her pregnancy. Before using this verse to comment upon Joseph's character, it is important to mention the status of Mary and Joseph's relationship when Joseph learned of her pregnancy. Matt 1:18 says that "before they [Mary and Joseph] came together," Mary was found to be pregnant. Traditionally this verse has been interpreted as supporting the concept of the virgin birth, with the verb "come together" understood as referring to sexual intercourse. Some more recent commentators have suggested that the verb refers to living together, with no reference to sexual intercourse. The customs of betrothal in Palestine during this time probably entailed a legal arrangement whereby the intent of a complete marriage between two partners was arranged by the man and a representative of the woman. Whereas there is some evidence that sexual intercourse was involved in effecting the betrothal (much of the evidence appears to be later), usually this involved monetary payment, with the betrothed couple refraining from sexual intercourse until the formal marriage. There is a large quantity of evidence which shows that the virginity of the bride was to be desired. See VIRGIN. In any case if the woman was found to have had sexual intercourse with anyone other than her betrothed husband, a divorce or annulment could be effected if she was at fault. That Mary was a virgin during the time she was betrothed to Joseph is indicated by Matt 1:25, which says that Joseph did not know Mary until after the birth of Jesus (McHugh 1975: 157–63).

The cause of Joseph's wanting to divorce Mary secretly upon learning that she was pregnant has led to the following interpretations: Joseph suspected that Mary had been sexually unfaithful and possibly was preserving his own reputation; he was completely bewildered at this development because of her supposed virginity; he had a legal, if not moral, obligation to divorce a woman who was to bear the child of another man, though he desired to preserve her reputation; Joseph, being a compassionate man, desired to spare Mary shame; and a recently revived proposal that Joseph knew of the virgin conception and felt inade-

quate to be involved with such a marvelous act or to expose Mary to possible ridicule (McHugh 1975: 164–72; Bulbeck 1948; cf. Cantwell 1982: 305–12). Before any of these solutions can be adopted, it is necessary to understand what it means that Joseph was "just" in light of his not being willing to expose Mary publicly. Some of the views are that Joseph was discreet in not wanting to expose her publicly (Spicq 1964: 207); that Joseph was kind or merciful and therefore unwilling to expose Mary publicly; that Joseph had respect or awe for God's plan and therefore was unwilling to expose her publicly; and that Joseph was obedient to the OT law but unwilling to expose her publicly (Brown 1977: 125–27). Although Brown argues for the fourth position, the linkage by "and" of the participle with "just" and the negated participle "not willing" makes a more likely understanding that Joseph, a man devoted to the righteous standards of the OT and thus within his rights to divorce Mary publicly, chose a less public or even more lenient divorce, rather than a public accusation, when it became obvious in her physical appearance that she was pregnant (see Carson 1984: 74–75, 81; following Hill 1964–65; cf. Brown 1977: 128; Tosato 1979; Gundry 1982: 21–22; Pesch 1967: 83). Joseph's high moral standards and his desire not to bring undue infamy on his betrothed, Mary, are in keeping with his character as elsewhere exemplified in the biblical account. He is recorded as taking Mary with him to Bethlehem for the enrollment even though women did not need to be present, as being responsive to the several dreams which informed him about the special nature of Mary's child, and as taking special care to preserve the child's life by fleeing to Egypt, besides fulfilling necessary purification rites after birth of the child. Brown (1977: 228–29) sees Matthew as rewriting "a pre-Matthean narrative associating the birth of Jesus, son of Joseph, with the patriarch Joseph and the birth of Moses," while Carson (1984: 90–91) suggests a parallel with Jacob's fleeing the famine in Canaan (Genesis 46). Joseph was apparently regarded by Mary as holding authority in her son's life when in speaking to Jesus she refers to Joseph as "your father" (Luke 2:48). Note however that Joseph is not called the "father" of Jesus in Matthew 2 (Machen 1930: 175–76), even though it is arguably true that Matthew's account of Jesus' infancy is presented from Joseph's perspective, as opposed to Mary's perspective in Luke (see Stendahl 1983: 57). Davies and Allison (*Matthew* ICC, 182; cf. Brown, 1977: 111–12) note that Joseph, Jesus' father, like OT Joseph had a father named Jacob, went to Egypt, had dreams about the future, was chaste, and was disinclined to shame others, thus pointing to the possibility of a Joseph typology in Luke 1–2.

The fourth issue concerns reference to Joseph in the genealogies of Matthew (1:16) and Luke (3:23). One of the first noticeable differences between the two is that in Matthew's genealogy Jacob is the father of Joseph, the husband of Mary, but in Luke's genealogy Joseph is the son of Heli. This issue is of less concern here than it is in relation to Heli, Matthat, and Matthan. See MATTHAT; GENEALOGY. Matthew's and Luke's genealogies follow the line of Joseph, who is apparently designated as Jesus' legal father and a descendant in the line of David (Luke 2:4; 3:23; see Cranfield 1988: 180; cf. Matt 1:1; Luke 1:27, where "of the house of David" refers to Joseph; the badly attested textual variant in Matt 1:16, which reads that "Joseph . . . was the father of Jesus," is undoubtedly to be rejected; see *TCGNT,* 2–7). More significant for discussion of Joseph is the parenthetical phrase in Luke 3:23, "as was supposed," with reference to Jesus being the son of Joseph (a textual variant places "son" after the phrase, but this does not affect interpretation). Some scholars have taken the article following Joseph, *tou,* as referring to "son," making the parenthetical comment read "of Joseph as was supposed" (Godet 1890: 143). This supposedly alleviates the problem with the variants in the genealogies, with Heli the father of Mary, but this understanding is to be rejected. First it is based on a change of punctuation added by later editors. Second it requires an unnatural relationship between *tou* and what is its normal appositional antecedent, the preceding name (see Machen 1930: 203–4; Marshall *Luke* NIGTC, 162). The best understanding is "being a son, as was supposed, of Joseph, the son of . . ." There are two major interpretations of the phrase. The first is that Luke was uncertain about the historical accuracy of the entire genealogy, or he realized that Jesus' descent had already become a matter of polemical dispute (Johnson 1969: 230–31). A second alternative, more likely in light of the statements mentioned above regarding Joseph's response to Mary's becoming pregnant, is that the gospel writer knew that in fact Joseph was not the physical father of Jesus and that the phrase was added possibly to avoid misunderstanding in relation to Luke 1–2 (Marshall, 162).

STANLEY E. PORTER

JOSEPH, PRAYER OF. The pseudepigraphon known as the *Prayer of Joseph* has survived only in three fragments preserved in the writings of the Christian Father Origen and in references to Origen in Gregory, Basil, Eusebius, and Procopius. Fragment A, the largest of the three, is only nine sentences long and is quoted in Origen's *Commentary on John* 2.31 [25]. Fragment B, which is only one sentence, comes to us from Origen's *Philocalia* (23.15) compiled by Saints Gregory and Basil. It is also cited in Eusebius' *Preparation for the Gospel* 6.2 and in Procopius' *On Genesis*. Fragment C, also one sentence, similarly comes to us from Origen's *Philocalia* through Gregory and Basil. Thus only eleven sentences out of eleven hundred lines, the original length of the document according to Nicephorus, have survived. However, the Prayer is named in several of the ancient lists besides Nicephorus, such as the Sixty Books and the canon lists of Mechitar of Ayrivank and Pseudo-Athanasius. Clearly the Prayer had a wide circulation in antiquity.

With such a small sample of the text surviving, it is hazardous to conclude too much about the character of the original. Mutually exclusive hypotheses have been proposed on the questions of date, original language, and provenance. However, in recent scholarship a slight preference is perhaps discernible for the *Prayer of Joseph*'s being understood as a product of the 1st century C.E. originally written either in Aramaic or Greek by a Jewish author.

In fragment A Jacob describes events associated with his wrestling with the angel at Peniel (Genesis 32). Fragment B suggests that Jacob is addressing his account to Joseph; and this, of course, raises the possibility that the document properly belongs to the genre of testamentary literature. Jacob reveals that in a preexistence, before he entered into mortality, he was one of the chief angels of God, a ruling spirit, and that his name in this preexistent state was *Israel*, which he interprets as meaning "man seeing God." Jacob further explains that in his angelic preexistence he was "the archangel of the power of the Lord," "the chief captain among the sons of God," and the "firstborn of every living thing."

Jacob identifies the angel with whom he wrestled as Uriel and describes the contest in distinctly negative terms. Apparently Uriel, described here as the eighth in rank after Israel among the ruling angels of God, was attempting to establish preeminence over his superior by attacking him in his mortal condition. Jacob's victory seems based upon his knowing the name of his attacker and his own angel name and rank and his calling upon God "by the inextinguishable name," likely some esoteric name of Yahweh. The emphasis on the power of names, the preexistence of Jacob as the ruling angel Israel, and the identification of a hostile Uriel as the angelic antagonist of Genesis 32 are the remarkable theological features of the *Prayer of Joseph*.

In the second fragment Jacob seems to be addressing Joseph and perhaps also his grandsons Ephraim and Manasseh. He explains that he has "read in the tablets of heaven all that shall befall you and your sons." The heavenly tablets are known from *Jubilees* and the Enoch literature; the vision of the future and its transmission by the seer to his posterity are commonplaces in the Pseudepigrapha and other literature of the period and are elsewhere attributed to Adam, Enoch, and Moses.

The third fragment reiterates the identity of Jacob as the preexistent angel Israel, "a chief captain of the power of the Lord." It further adds that Jacob was reminded of his preexistent identity by his encounter with the angel Uriel.

STEPHEN E. ROBINSON

JOSEPH, SON OF JACOB. The 11th son of the patriarch Jacob, and the principal character in the biblical narrative of Genesis 37–50.

A. The Name
B. The Tribe
C. The Story
 1. Theme: Familial Strife
 2. Plot
 3. Theological Concerns
D. Sources
E. Genres
 1. Sitz im Leben
 2. Dating
F. Purpose of the Story

A. The Name

The name itself derives from the Hebrew verb *ysp*. It maintains its verbal form with an appropriate meaning: "He adds." The popular etymology for the name in Gen 30:24 suggests that the divine name was the subject of the verb and that the meaning of the name is: "May the Lord add (to me another son)." Indeed, it is clear that names of this type commonly employed an additional element, the name of the deity who would underwrite the power of the name given to a human. From extrabiblical sources, for example, the name "Jacob-El" illustrates the form. That combination is implied by the explanation of the name Joseph. But this hypothetical long form is not attested in the OT traditions about Joseph.

B. The Tribe

The OT tradition about Joseph does not include him in the list of Israel's patriarchs, instead listing these as Abraham, Isaac, and Jacob (Exod 2:24; 3:6, 15; 4:5; etc.). Joseph belongs to the next generation, as one of the eponymic "fathers" of the twelve tribes of Israel (so, Josh 18:11; Judg 1:22; 2 Sam 19:21; 1 Kgs 11:28).

The tradition remembers that the tribe of Joseph was divided, perhaps at the time in the history of the tradition when Levi ceased functioning as a secular tribe: the subdivision of Joseph yielded two tribes, Ephraim and Manasseh, incidentally preserving the number twelve, a structural constant in the political organization. This division appears in the narrative concerning the Joseph tradition

in Gen 48:1–12 and in the report of the patriarchal blessing in vv 13–20. The same tradition is reflected in Josh 14:4; 16:4; 17:17, and in the Blessing of Moses in Deuteronomy 33. In Deut 33:13–17 Moses blesses the tribe of Joseph. But the final line, v 17b, recognizes the split in the structure of the Joseph tribe between Ephraim and Manasseh. Moreover, the Joseph unit becomes a symbol for the N kingdom, the nation of Israel, in contrast to the S kingdom, the nation of Judah (Ezek 5:6; 37:19; Obad 18; Zech 10:6).

C. The Story

For the OT tradition it is important to note not only that Joseph is the son of Jacob, one of a group of brothers who give their names to the twelve-tribe union that comprises Israel, but also that Joseph is the son of Rachel, the favorite wife of Jacob. The birth story sets the Joseph tradition into the form of a popular tale. Rachel, the favorite wife, had been barren. Leah, the sister of Rachel and the second wife of Jacob, had given birth to Reuben and Simeon. Rachel had adopted the son of her servant, Bilhah, and named him Naphtali. But only after the competition had taken Leah through six sons did Rachel finally break free from her barren status. The text makes the event explicitly an act of intervention from God: "God remembered Rachel . . . and opened her womb." Thus, just as in the Abraham saga, where Sarah had been barren and in competition with Hagar, so in the Jacob saga, Rachel, who once was barren, gives birth to a son in the midst of family competition, indeed, family strife. That son is Joseph.

1. Theme: Familial Strife. Moreover, the birth story for Joseph has as its context other traditions surrounding strife in the family. The strife theme belongs to the complex of narrative motifs developed throughout the range of the Abraham saga and the Jacob saga. Indeed, the position of the death report for Jacob in Genesis 49 suggests that the Joseph tradition has been bound into the structure of the Jacob saga. From its larger context the Joseph story inherits a milieu of strife.

The position of the Joseph death report in Gen 50:22–26, an element which forms a counterpoint to the Joseph birth story, suggests that the patterns of a Joseph saga can still be seen in the Genesis narrative. Moreover, immediately preceding the Joseph death report, a recapitulation of motifs from earlier stages of the Joseph narrative suggests that at Joseph's death, the family so marked by strife has still found no reconciliation. In this small segment of narrative, the brothers approach Joseph, who holds the power of life and death over them, and weave a tale about Jacob's last wishes for reconciliation between the brothers and Joseph. Joseph responds favorably and grants his forgiveness to his brothers and, through that act, makes his contribution to reconciliation for the family. But the storyteller suggests by the particular construction of the scene that the reconciliation achieved is in fact a sham. The brothers' story about Jacob's last wish has no parallel in the preceding narratives. The brothers apparently intended to deceive Joseph in order to gain asylum. And with that act of deception, the story of a broken and suspicious family comes to an end.

2. Plot. A carefully constructed narrative about Joseph appears in the middle of the larger saga about Jacob with its emphasis on strife that breaks a family apart. This narrative about Joseph stands within the limits of the hypothetical Joseph saga, which is framed by a birth report and a death report. This narrative is different from the surrounding stories about Jacob and his family. It is not a collection of individual tales constructed into a family saga. It is a unit from the first scene to the last. It begins in 37:1 with a notation that "Jacob dwelt in the land of his father's sojournings, in the land of Canaan." And it ends in 47:27 with an exact parallel to its beginnings, the only two changes reflecting the consequence of the long, connected story: "Israel dwelt in the land of Egypt, in the land of Goshen."

The structure of the story framed by these two parallel sentences reveals a clearly constructed plot: (1) exposition (Gen 37:1–4); (2) complication (Gen 37:5–36); (3) digression (Genesis 39–41); (4) complication (Genesis 42–44); (5) denouement (Genesis 45); and (6) conclusion (Gen 46:1–47:27). Moreover, the unifying theme for the development of this plot is the same as the one that dominates the Abraham saga and the Jacob saga: strife in the family. Some indication of a critical role for the promise theme in the patriarchal traditions appears here. For example, in Joseph's speech, 45:4b–13, Joseph avers that "God sent me before you to preserve life. . . . God sent me before you to preserve for you a remnant on earth and to keep alive for you many survivors. So it was not you who sent me here, but God. . . ." The many survivors fulfill the promise for great posterity, the promise that descendants would become a great nation. But the dominant theme in the Joseph story is strife in a family, broken family structures, and eventually, reconciliation that restores the family to a position of unity. The nature of that reconciliation is a key for the Joseph traditions in the Pentateuch, indeed, for the theological structure of the Pentateuch itself.

In the middle of the rather tight structure for the Joseph story, Genesis 39–41 represents a discrete, perhaps originally independent story about Joseph. The story has been used by the author of the larger narrative about Joseph. But in the present position as digression in the movement of narrative about Joseph and his brothers, this unit reveals its character as a story within a story, a story with its own independent structure, genre, and intention. The structure of the independent story comprises three distinct scenes, each designed to depict Joseph as the ideal administrator. The first scene, chap. 39, sets Joseph in Potiphar's house. Finding favor in Potiphar's sight because of his skill as administrator in the house, Joseph rises to the position of overseer in the house. When Potiphar's wife attempts to seduce him, he refuses, not only because to submit would be a "sin against God," but also because it would violate the responsibility he carried as administrator of Potiphar's house. His refusal brought false accusation from the woman and prison from Potiphar, but clearly that fate occurs with Joseph's integrity intact. In prison he rises to a position of trust in the eyes of the captain of the guard, receiving responsibility for two of the pharaoh's servants jailed when they had fallen from the pharaoh's favor. The servants dream prophetic dreams, report them to Joseph, and despite the negative meaning of one, receive interpretations from Joseph. Forgotten by the fortunate servant restored to the pharaoh's favor, Joseph waits in prison

until the pharaoh dreams a dream. When none of the pharaoh's professional wise men could interpret it, the servant from the prison recalls Joseph's abilities and recommends him to the pharaoh. Called to the royal chambers, Joseph interprets the royal dream. The pharaoh heeds Joseph's suggestion to appoint a steward for the grain collected during the years of plenty. That steward should be wise and perceptive (the virtues characteristic for an administrator of skill); and since Joseph meets those virtues, he is appointed to the post.

As a complete story, this depiction of Joseph shows a pattern of virtue for all administrators to imitate. But in the larger Joseph story, the digression serves the narrative function of transition. It transports Joseph, the brash but abused brother in Jacob's family, from his position in Canaan to his position in Egypt, where, in his new position of power, he may in turn choose to be brash and abusive.

The second complication in the structure of the Joseph story reverses the role of the principals as they appeared in the first complication. In the first complication Joseph is brash but at the mercy of his brothers. Indeed, the brothers manufacture a story to deceive the old father and set the stage for the broken family. In the second complication Joseph is still brash. But in this case, the unsuspecting brothers are at the mercy of the strange Egyptian who controls the food reserves. Joseph toys with them before he breaks the tension of the scene. First, he accuses them of spying. In order to prove their innocence, the brothers must return to their homes in order to bring the youngest son of Jacob and Rachel to the mysterious vizier. But in the process, they must leave a brother in Egypt, in prison, to await their return with proof of their true identity.

The brothers delay their return to Egypt, however, until the food bought in their first trip had been consumed. The reason for the delay rests with the father's reluctance to send the youngest son of Rachel to such an uncertain fate. But in addition, the narrator heightens the sense of fate hanging over the brothers: when they had arrived at a resting-place on the journey to their homes after the first trip to Egypt, they discovered their money hidden in the sacks of grain. Without their knowledge Joseph had ordered the money be hidden in their sacks, but the discovery brought no joy. It does not disclose an act of reconciliation offered by Joseph to his brothers. It brought fear. "At this their hearts failed them. . . . 'What is this that God has done to us?'" With fate so mysterious, the brothers leave a brother in prison. When necessity finally weighed more heavily than their reluctance to return, they petitioned their father for permission to take Benjamin, the youngest son of Rachel, and return for a new round of provisions. With great fear and only after the strongest possible guarantee from Judah, Jacob agreed. And the brothers set out for Egypt again. In Egypt they gain an audience with the mysterious vizier, only to learn that no charge of theft lies against them. Their anxiety had had no ground in reality. They introduce their younger brother, arrange for the grain, and set out with all of the brothers in the company. All appears to be in order.

At this point Joseph springs the final trap. A servant overtakes the brothers' caravan and accuses them of stealing the divining cup of the Egyptian. Protesting their innocence, the brothers submit to a search with a vow that any guilty brother found with the cup would die and the others would become slaves to the mysterious vizier. The storyteller's skill holds the audience in suspense while he depicts the Egyptian searching each bag from the oldest brother to the youngest. (A similar technique for maintaining suspense appears in Genesis 31.) And again, the storyteller (or Joseph) springs his trap. The object of the search had been hidden in Benjamin's bag. Benjamin would have to die, and the other brothers would become slaves. In that dire crisis the brothers return to Egypt in order to appear before the Egyptian.

The tension in the scene builds to a climax as the brothers present themselves to the Egyptian. The brothers expect to hear the judgment pronounced against them in accord with the oath. But in that setting, Judah offers himself in the place of the younger brother (cf. Moses in Exod 32:32). At the highest point of tension, Joseph breaks the charade and identifies himself as Joseph to his brothers (45:1–3). The revelation might have been depicted as good news. The brothers might assume that now they would be free of the judgment against them. But the storyteller controls the scene by observing that the brothers were dismayed when they learned Joseph's identity. Joseph, even as brother, had the power of life and death over the guilty group. He could now openly seek his revenge. But the story moves in the opposite direction. Instead of death for the guilty brothers, Joseph "fell on his brother Benjamin's neck and wept (cf. Gen 33:4) . . . and he kissed all of his brothers and wept on them, and after that his brothers talked to him." The reconciliation among the brothers contrasts with the negative image in 37:4.

The conclusion carries the dramatic turning point in the story to a smooth ending. Joseph makes arrangements with his brothers for transporting the families still at home in Canaan, including the father, Jacob, to Egypt. The point is, of course, that in Egypt Jacob and the family (the children of Israel) would be under Joseph's protection. But against the backdrop of the larger narrative, the transportation of the family to Egypt represents the reconciliation of a family broken apart by the strife among the brothers.

3. Theological Concerns. The theological character of that reconciliation is important to note. (1) Joseph avers that his own move to Egypt was the result, not of the evil intended against him by the brothers, but of the good intended for him and for many survivors (the descendants of Jacob/Israel or perhaps all the families of the world who eat from the bounty stored by Joseph in Egypt) from the hand of God. (2) But the story is not primarily about God's intervention to save the day; it is also about Joseph's initiative, even in the face of hostility, to save the day for all the people of the world. It is also about Joseph's initiative to save the day for his brothers and his father. To be sure, he sports with them; there is no reconciliation in that. But finally, he welcomes his family to Egypt and shows them how to prepare for their future. The family disregarded a tragic past and committed themselves to one another in a common future. As a result, the reconciliation that appeared elusive for the patriarchal generation came to some fruition through Joseph. (3) Joseph's wisdom and perception influence not only the story within the story (Genesis 39–41), but also the entire structure of the narrative.

Joseph's integrity as administrator facilitates reconciliation of the family.

D. Sources

The Joseph story has served OT scholars as a showcase for evidence that can be used to support identification of the classical pentateuchal sources. The Priestly source does not appear in the narrative to any significant extent. Indeed, even the few fragments defined by source critics as a part of P can be understood more adequately as intrinsic parts of the whole. Gen 37:1–2, for example, serves as a key in the parallel that marks the beginning and ending of the story and cannot be explained as an imitation of the Priestly formula about the generations of Israel.

The more important argument about sources in the Joseph story asserts that in the middle of the predominantly J narrative fragments of the E source appear and that this can be detected by the significant presence of repetitions and duplications of material. For example, the brothers of Joseph appear as the sons of Israel (J) or the sons of Jacob (E). A compassionate brother, at first Judah (J), then Reuben (E), defends Joseph against the plan to sell him to the Ishmaelites (J) or simply to let him fall into the hands of the Midianites (E). Joseph becomes the slave of an unnamed Egyptian whose wife attempts to seduce him (J) or the slave of Potiphar, the captain of the prison (E). Joseph becomes the administrator of the land of Egypt (J), but he has responsibility for the pharaoh's household (E). The sons of Israel (J) or of Jacob (E) come to Egypt. Joseph accuses them of seeking advantage in Egypt (J) or of being spies (E). On their return they find their money hidden in their sacks of grain at an inn on the way to their home (J) and the rest of the money when they arrive at home (E). On the second journey they are invited to settle in Egypt by Joseph (E) and by the pharaoh (J).

Yet, more recent examination of the story softens the argument for two sources by suggesting that one author can use repetition as a narrative technique for emphasis, perhaps simply for variety. Perhaps two brothers could be depicted as compassionate by a single source. Perhaps the mysterious Egyptian could accuse the sons of Jacob of general exploration seeking advantage, then of a more specific act, spying for military advantage. The strongest argument for two sources in the Joseph story is the doublet represented by the reference in 37:25 to the Ishmaelites, then the reference in 37:27 to the Midianites. The doublet is compounded in 37:36 with a note that the Midianites sold Joseph in Egypt to Potiphar, while 39:1 notes that Potiphar had bought Joseph from the Ishmaelites. This apparent doublet disappears, however, if one recognizes that the words "Midianite traders passed by" in 37:28 are a gloss. If these words were not in the text, then the brothers would be the subject of the verbs in v 28: "They drew Joseph up and lifted him out of the pit and sold him to the Ishmaelites for twenty shekels of silver and they (the Ishmaelites) took Joseph to Egypt." The gloss could have arisen to shield the other sons of Israel against the charge of selling a brother into slavery, a crime punishable by death (Deut 24:7). Moreover, to treat the reference to the Midianites in vv 28 and 36 as glosses removes the obvious contradiction in the story. Verse 28 reports that the Midianites sold Joseph to the Ishmaelites, while verse 36 reports that they sold him to Potiphar.

These observations support more recent analysis of the Joseph story that concludes that the story is fundamentally a unit, the work of one hand. It is easy to argue that that hand belongs to the Yahwist (J). The Joseph story fits appropriately in the larger structure of the Yahwist. The Yahwist has used the Joseph story to bridge the gap between patriarchs in Canaan and Israelites in Egypt. But there is no clear evidence that the author who constructed the lengthy narrative, the Joseph story, was the Yahwist. The appropriate conclusion seems to be that the Yahwist has used a carefully constructed, distinct story about Joseph as the structural bridge for the larger narrative about Israel's early history. While the Yahwist might have been the author, this conclusion cannot be firmly supported.

Questions about sources for the Joseph story must move the reader not only through observations about the classical sources for the Pentateuch as they might or might not appear in the Joseph story, but also through observations about other sources employed in the construction of the story. For example, the story within the story (Genesis 39–41) represents a distinct element in the structure of the Joseph story as it now appears. What can be said about the tradition preserved in that story? An Egyptian narrative, commonly called the "Tale of the Two Brothers," describes the events in the relationship of two brothers. The younger brother lived with his older brother and his wife. It was his duty to work in the older brother's fields; and in return the older brother provided food, shelter, and clothes for the younger brother. The younger brother was highly successful in his work, producing a good return from the cattle in his care. On one trip from the field to the older brother's house in order to obtain seed for planting, the younger brother encountered the seductive invitation of the elder brother's wife. The younger brother refused the invitation. But the woman manufactured false evidence and accused him of an attack. Her husband then created a plan to kill his younger brother. Saved by a message from a cow in his care, the younger brother fled. The story continues beyond its parallel with Joseph. But the pattern at the beginning of the tale suggests a plot in common with the account of Joseph in the house of Potiphar.

A second Egyptian story relevant for understanding the Joseph traditions is the "Tale of Sinuhe." This story enlarges the picture of relationships between Palestine and Egypt. Sinuhe, an Egyptian official who left his homeland in voluntary exile, met hospitality in the various stages of his journey. Indeed, the ideal relationships developed by the young man in foreign courts suggest that, like Joseph, Sinuhe served as a model for a courtier in a period of relative prosperity. And he carries that model back to his home and his own people.

It is possible that these Egyptian stories undergird the Joseph story, particularly the story within the story. This observation does not suggest that the author of the Joseph story has used the Egyptian parallels in the same way that he used the story within the story to build his narrative; rather it suggests only that the narrative motifs were part of the culture that gave rise to the Joseph story.

The pattern of the Joseph story puts greater weight on the creativity of the author. To be sure, the author used

traditions of storytelling such as the "Tale of the Two Brothers" in the construction of the Joseph story. And the traditions of the promise to the fathers or the strife within the family represent building blocks for the narrative. The Joseph story does reveal its position in the history of Israel's tradition and, indeed, in the tradition of storytelling in the ANE world. Yet, the significance of the Joseph story lies in its own unique construction with its own unique functions and intention.

E. Genres

The genre of the Joseph story supports this description of the constructional uniqueness in the structure of its narration. A consensus is that the Joseph story is a novella, a genre category that facilitates the original conceptions of an artist rather than the patterns of a traditional folk story handed down from one generation to the next. It may be the case that a tale lies behind this extended story of Joseph, a brief story that would have concentrated on the event that broke the unity of Jacob's family and then the event that would have brought them together again. A novella is a creative construction by the author, designed to meet the author's distinctive goals. The author presents not simply what happened long ago and far away, but rather what happened and continues to happen so that the traditions carried by the plot structure capture each new audience. Historical figures and events are caught up into an imaginative fabric produced by the creative activity of the author. Its concern is not to report historical events; it is to build a plot that will hold the audience through its development to a point of climax. And in its development, it reflects the process of life that can give identity to its audience. Indeed, the genre facilitates construction of the plot so that particular facets in the process of life can have an impact on the audience as forceful influences in that quest for identity.

The story within the story (chaps. 39–41) can be isolated from the longer novella and analyzed for itself. The patterns of three scenes in this story depict the ideal shape of the administrator in a household, in a prison, and finally in the royal court. As ideal administrator, the hero emerges as a figure whose virtues can be imitated by all subsequent administrators. Joseph sets the pace for all who exercise responsibility in the organization of a superior. As the ideal whose virtues can be imitated by future generations, this figure functions as the hero of a legend. The story about Joseph, who rises from rags to riches, is a legend designed to show courtiers what responsibility in their profession looks like. It should be clear that classification of this story, so similar to narratives from Egypt, does not define historicity in the Joseph story. The rise from rags to riches may be accurate history describing how one of Israel's ancestors in fact rose to power in Egypt. It may be a story of magnificent imagination, influenced by similar tales and legends from Egypt. To define the story as legend does not establish or deny historicity for the tradition that Joseph was an Egyptian vizier. It shows simply that the story depicts Joseph as the administrator whose virtues should be imitated by all subsequent administrators.

1. Sitz im Leben. The question about setting for these levels of tradition in the Joseph story is more difficult. The legend shows evidence of setting in the circles of ANE wisdom. The hero at the center of the legend depicts the virtues of *wisdom* and *perception,* virtues that enable any person to function as administrator in a royal court, a prison, a complex household (cf. 1 Kgs 3:3–15). That wisdom legend influences the larger novella. Yet, it does not necessitate the conclusion that the novella is also a wisdom story. The setting for the novella is a literary one, the productivity of the author who imposes his own mark onto the shape of the story. That the author knows the cultural constructions of Egypt reveals a cosmopolitan milieu. It might be reasonable to imagine that the author was at home in the enlightenment supported by the royal court, perhaps even the cultural activity of the Solomonic court. That the author had access to a wisdom legend suggests familiarity with wisdom resources. But with the same manner of caution that guards against identification of the author of the story as the Yahwist, so caution guards against ready identification of the setting for the story as a whole as wisdom. At most it can be said that it is a carefully constructed artwork from the hand of an author.

2. Dating. The question of the historical situation for the Joseph novella hides two questions: (1) when did the author of the novella compose the story? and (2) what is the period in which the Joseph story is set? If the Sitz im Leben defined above (the enlightenment of the royal court) has any merit, then the time for the construction of the novella might be set in the Solomonic court or some period shortly after that time when the patronage of the king could have supported such artistic composition. That time, roughly the 10th century B.C., would correspond to the period traditionally identified as the time for the origin of the Yahwist's production of the whole narrative tradition.

At least two important pieces of extrabiblical evidence have been appealed to in order to date the era in which the Joseph novella is set. A number of documents (most notably, the Amarna Letters) attest to the LB period. These were rootless people living on the fringe of society. It is possible that the OT term *Hebrew* is related to this widespread term. See HABIRU, HAPIRU. When Potiphar's wife accuses Joseph of an attack to her husband, she calls him a *Hebrew,* as if the term were derogatory. One might inquire whether the *habiru* might have been involved among the people noted by an Egyptian frontier official in a report about passage of people in and out of Egypt during periods of famine. Other documents attest to the invasions of the Hyksos, a Semitic people who usurped political control in Egypt during a period from 1700 to 1550 B.C. See HYKSOS. It is possible that these people were more favorable to people like Joseph and his family, and it is also possible that the reference to a pharaoh "who did not know Joseph" (Exod 1:8) recalls a period when the Hyksos leadership in Egypt was rejected in favor of a new dynasty of native Egyptian kings.

Yet, it is important to note that none of the documents from the 2d millennium mention Joseph and his brothers by name. The documents serve only to establish that the Joseph story builds its plot with careful attention to cultural detail from a particular period. The story employs historical verisimilitude effectively. But the effective description of a culture that did in fact exist does not estab-

lish the historicity of the events and personalities set out in the Joseph novella, nor does it deny it. The story has value *as a story*, not as an object that leads its audience behind the story to some other reality such as the factual, historical events involving Joseph, his brothers, and his father. The same point can be made about the definition of the genre for the story. To define the story as novella does not mean that the description of the events in the plot is simply fiction. Nothing in the designation of the genre denies the possibility that the plot structure reflects historical events. But the designation of the genre does not enable the critic to move behind the story to reconstruct the process of history.

F. Purpose of the Story

The Joseph novella has at least two significant intentions. (1) It intends to depict the ideal power figure. Joseph, the vizier of Egypt, uses his power not only to facilitate the reconciliation of his family and their security during devastating years of famine, but also to preserve people from all the neighboring world who come to him for food. He administers the grain reserves in Egypt without prejudice for one group of people or another. The twin virtues of wisdom and perception become the virtues that all persons in positions of power should have (1 Kgs 3:12; cf. also Ps 105:16–22). (2) The novella also bridges the OT traditions about the patriarchal fathers in Canaan (Genesis 11–38) and those about the Israelites in Egypt (Exodus). One should not conclude from this observation that the Joseph novella has no value in and of itself. Its value within its own construct comes to light particularly in the second stage of its account of movement from Canaan to Egypt. Reconciliation comes to a family torn apart by strife by moving beyond contention to consider prospects for the future. The death report about Joseph, with its bond concerning Joseph's bones as part of the move back to Canaan (cf. Exod 13:19; Josh 24:32), expands the Joseph tradition into the future stages of Israel's life on the land. At this point of transition, the Joseph story plays an essential role in the shape of Israel's traditions. The structure of the Pentateuch/Hexateuch shows a problem not only in the position of the Sinai traditions within the framework of the whole, but also in the relationship between the patriarchal theme and the Exodus theme. What kind of relationship did the patriarchal traditions, with their focus on strife/promise have with the Exodus tradition, with its focus on redemption from oppression? The Joseph novella answers the question. But the answer lies not simply in having Jacob in Canaan become Israel in Egypt. The promise theme from Gen 12:1–3 finds no explicit point of contact here; implicitly it appears in the act of God through Joseph to save a remnant of Jacob's people. But promise language does not appear.

In place of the promise language, the content of the entire Joseph story revolves around the issue of strife that breaks a family apart. And as a story about strife, the Joseph novella fits the context in the patriarchal theme generally; and the Joseph novella in particular is focused upon that strife. How can a family torn apart by strife be reconciled? Or, more to the point of the theology reflected in Gen 12:1–3, how can a family broken apart by strife serve as a vehicle for God's blessing? The answer to the question posed for the entire patriarchal theme is that given by Joseph's leadership: the family turns from the strife in the past to a commitment to each other for a common future. That intimacy is secured in the symbol of the Joseph tradition with the oath to bury Joseph's bones with the family in Canaan. The familial intimacy lost in the Garden and in the struggles among people during the periods of the Flood and the Tower of Babel could be restored among the descendants of Abraham, Isaac, and Jacob through their mutual commitment to a common future. Moreover, the power exercised by Joseph over the Egyptians but also over the family facilitates reconciliation. The Joseph story ends on a note of common hope, indeed, a note of union for the future.

Yet, the Joseph tradition does not end uniformly on a note of reconciliation. The death report for Jacob illustrates the continued break in the family and suggests that the final reconciliation in the people of God is projected beyond the patriarchal people to the next generation. The question posed (by the Yahwist?) in the Joseph narrative is thus: Will a reconciliation restore the intimacy of God's people in the next generation? That facet of manipulation, that ploy of deception, in contrast to the Joseph novella recalls the negative element in the patriarchal sagas and anticipates the negative element in the Moses saga. God acts for the sake of the people. But the people show tragically a negative, rebellious side. In what manner can reconciliation for these people ever occur? For further discussion, see commentaries on Genesis in AB, OTL, BKAT, IBC, and FOTL.

GEORGE W. COATS

JOSEPHUS (PERSON). A 1st-century Jewish politician, soldier, and historian, whose writings constitute important sources for our understanding of biblical history and of the political history of Roman Palestine in the 1st century C.E.

Josephus was born in 37 C.E. and was given the Hebrew name Joseph ben Mattathias. His mother was a descendant of the Hasmonean family that had ruled Jerusalem a century earlier, and by birthright he was a priest. In Jerusalem he received a superb education, and at the age of 27 (in 64 C.E.) he led a delegation to the court of the Roman emperor Nero. Two years later he was pressed to serve as the general of the Jewish forces in Galilee in the revolt against Rome. He was captured and afterwards became a Roman citizen and pensioner of the Flavian emperors Vespasian, Titus, and Domitian. He is most

widely known by the Roman name he then acquired, Flavius Josephus (or simply "Josephus").

In Rome Josephus resided in an apartment within the emperor's house and devoted much of his time to writing. In part his works were addressed to his fellow Jews, justifying to them not only Roman conduct during the Jewish War, but also his own personal conduct in switching loyalties. However, his writings were also designed to justify Jewish culture and religion to an interested and sometimes sympathetic Roman audience. The earliest of his extant writings is the *Bellum Judaicarum* (or *Jewish War*), which was apparently drafted initially in Aramaic and then translated into Greek 5 to 10 years after the 70 C.E. destruction of Jerusalem. His second work, *Antiquitates Judaicae* (or *Jewish Antiquities*), was published more than a decade later; it was much longer, and recounts Jewish history from creation to the Jewish War, and contains some valuable historical information. His last two works, probably published shortly before his death, include the *Vita* (or *Life*), an autobiography intended primarily to defend his conduct during the Jewish War 30 years earlier, and *Contra Apionem* (or *Against Apion*), an apologetic defense of Judaism against a wave of anti-Semitism emanating from Alexandria. Josephus probably died ca. 100 C.E., several years after Trajan had become emperor in Rome. His writings, while generally ignored by fellow Jews, were preserved by Christians not only because they chronicled generally and so well the "time between the testaments," but also because they contained specific references to John the Baptist, Jesus of Nazareth, and Jesus' brother James.

A. *Life*

Josephus is the author of the first autobiography that has come down to us from antiquity, but this work *(Life)* is for the most part a defense of his mission as a general in Galilee and contains few other details about his life. Some scholars believe that the bulk of its content was actually written shortly after the war itself—prior to the publication of his *Jewish War* (ca. 75–79 C.E.)—but that it was revised, supplemented, and updated prior to its publication ca. 95 C.E. The only pagan writers who do refer to events in the life of Josephus—the 2d-century Suetonius (*Vespasian* 5.6) and Appian (fragment 17) and the 3d-century Dio Cassius (66.1)—mention only his prediction that the Flavian Vespasian would become emperor (though there are slight discrepancies in these accounts). Josephus is never mentioned in the Talmudic corpus, unless he is the anonymous philosopher in Rome whose aid was solicited by four rabbis intent on persuading Domitian to annul his earlier decision to exterminate the Jews of the Roman Empire (*Der. Er. Rab.* 5).

Josephus (*Life* 1 §5) indicates that he was born in the first year of the reign of Gaius Caligula (37 C.E.). He also says that he was descended on both his parents' sides from the first of the 24 courses of priests and, on his mother's side, from the royal Hasmoneans (*Life* 1 §2). Consequently, it has even been suggested that Josephus may have had ambitions to be not only high priest, but also king of Judea, though the fact that his opponents apparently never mentioned such ambitions militates against such a view.

The first event which Josephus mentions about his life occurred when, at the age of 14 (*Life* 2 §9), the chief priests and leaders of Jerusalem constantly came to him for information about the laws. The motif of the precocious youngster who amazes his teachers is, however, commonplace, being found also in the biographies of Moses, Homer, Aeschines, Alexander the Great, Apollonius of Rhodes, Augustus, Ovid, Nicolaus of Damascus, Apollonius of Tyana, and Jesus. Likewise, the statement (*Life* 2 §10–12) that Josephus spent time (from the ages of 16 to 19) with the various sects of Jews (Pharisees, Sadducees, and Essenes) in order to select the best is similar to the motif found in the lives of Nicolaus of Damascus, Apollonius of Tyana, Justin, and Galen. Josephus also says that he spent three years with an otherwise unknown hermit named Bannus, but there is a problem in the text, since Josephus says that he was 19 when he completed both his experimentation with the sects and his sojourn with Bannus. Josephus then decided to join the Pharisees, though one would have expected him to favor the Sadducees, who were more closely affiliated with the priests and were more conservative than the Pharisees. But apparently Josephus realized that his ambitions would be better served by joining the Pharisees, since they were more popular with the masses (*Ant* 18.1.3 §15).

Josephus is silent about his activities between the ages of 19 and 26, but we may conjecture that it was particularly during these years that he made great progress in the study of Greek language and literature. In the year 64, when he was only 27, he was entrusted with the very delicate mission of securing the release of some priests who were imprisoned in Rome (*Life* 3 §13). Josephus' success was due to his resourcefulness in obtaining the help both of Aliturus, a Jewish actor in Nero's court, and of Nero's mistress, Poppaea Sabina, who was a "sympathizer" with Judaism (perhaps a so-called "semi-proselyte"). The fact that the emperor gave some gifts to Josephus (whereas we would have expected Josephus to send gifts to the emperor) could be explained most readily if we assume that Nero hoped thereby to persuade Josephus to use his influence to defuse the impending Jewish revolt against Rome. We do not know whether Josephus attempted such a mission, but in any case the revolt did break out two years later.

When the revolt did occur, the revolutionary council appointed Josephus to serve as general in Galilee, clearly the most important theater of the war since the Romans, who were based in Syria, were almost certain to strike there first in their march toward Jerusalem. It is remarkable that Josephus should have been chosen when he was a mere 29 years old and (as far as we know) without any military

experience. Indeed, Josephus himself apparently has two contradictory accounts of this appointment. In the first (*JW* 2.20.3 §562–68), written apparently sometime between 75 and 79 (i.e., within a decade of the revolt), he indicates that he was named to conduct the war by the revolutionaries after they had won over to their side the moderates, whether by persuasion or by force. In the *Life* (4 §17), published approximately two decades later, Josephus declares that the coalition of Jewish leaders, who favored pacification, appointed him with the intention that he would try to induce the rebels to fight only in self-defense, whereas actually they hoped that the Roman general, Cestius Gallus, would prevail. Especially incriminating is Josephus' statement that he declined to give grain to the revolutionary leader John of Gischala since he intended to keep it either for his own use or *for the Romans* (*Life* 13 §72). If Josephus had really been sincere in opposing the Romans, we may suggest that he should have followed the model of the Maccabees in their war against the Syrian Greeks two centuries earlier and fought like a guerrilla. His decision instead to remain in Jotapata played to the Romans' strength, which was siege warfare. Moreover, if and when things seemed hopeless, he should have retreated toward Jerusalem and joined his forces with those defending that city, which was much better fortified than Jotapata.

The later account (in the *Life*) would appear to correct the earlier one (in *JW*); and Josephus could afford to tell the truth, since now he was famous and honored. In defecting to the Romans, he was merely following the wishes of the council which had appointed him. One possible way of reconciling the two versions is to say that initially Josephus sincerely attempted to fight against Rome, but that when he saw that it was hopeless, he went over to the Roman side. The fact that upon his surrender to the Romans at Jotapata he received a tract of land outside Jerusalem, some sacred books (presumably Torah scrolls), the liberation of some friends, Roman citizenship, lodging in the former palace of the Roman general Vespasian, and a pension would indicate that he had done something significant to ingratiate himself with the Romans. His prediction that Vespasian would become emperor has often been compared with that of Rabbi Johanan ben Zakkai's prediction (*Giṭ.* 56a–b); however, the two should be differentiated, since Johanan asked and received nothing for himself. That two people independently might have made the same prediction does not seem implausible in view of the fact that Vespasian was clearly the most experienced Roman general of the time; indeed, Josephus (*JW* 6.5.4 §312), Suetonius (*Vespasian* 4), and Tacitus (*Hist.* 5.13) all indicate that there was a prediction in the air that someone from Judea would become ruler of the world at that time.

Moreover, it is hard to believe that it was by mere chance that Josephus and another of his men were the last two who survived the suicide pact at Jotapata; it seems more likely, as the Slavonic version of *JW* (3.8.7 §391) would have it, that Josephus had carefully manipulated the lots. His action is hardly excused by the fact that Josephus was not alone in siding with the Romans (the Jewish king Agrippa II also did so) or that he felt that he had to survive in order to write the history of the period and in order to defend the Jews against anti-Semitic attacks. On the other hand, Josephus may have been sincerely convinced first, that the war was a terrible mistake, since an independent state was hardly a sine qua non for Judaism; second, that the Jews had been given considerable privileges by the Romans; and, third, that they were well on their way to converting the Empire to Judaism. If the revolutionary council had indeed been sincere in prosecuting the war, it should have made a greater effort to enlist the support of Jewish communities outside Palestine, especially in Asia Minor, Syria, Egypt, and Babylonia (each of which had an estimated million Jews). It should also have attempted to entice the Parthians, the traditional and often successful opponent of the Romans, to coordinate the attack and to induce various other discontented rebel tribes to coordinate their revolts. However, the fact that we do not have the accounts of Josephus and his opponents, such as Justus of Tiberias, means that we have a one-sided view; yet the fact that Josephus himself did not destroy his own self-incriminating record leads us to believe in its essential truthfulness. And even if we did have Justus' work, there is no guarantee that it would be more reliable than that of Josephus; after all, Justus could hardly have served for so many years as court secretary to Agrippa II, a puppet of the Romans, unless he, too, had been a lackey of the Romans. Indeed, Josephus and Justus seem to have been rivals precisely because they were so similar in their outlook.

B. Other Works

1. *The Jewish War.* In the introduction to his *Jewish War* (= *JW*), Josephus, following the example of his model, Thucydides, presents a raison d'être for his work by vehemently criticizing his predecessors (none of whom is extant) for their inaccuracies, their bloated rhetoric, and their prejudice. He declares that he composed his work originally in his ancestral language—presumably Aramaic (though some have suggested that it was in Hebrew)—to be sent to the barbarians of the upper country (Babylonia and Parthia) apparently as a warning for them not to repeat the mistake of clashing with the Roman Empire (*JW* 1. Proem 1 §3). Not a single fragment of this Aramaic/Hebrew version has come down to us, presumably because of the bitterness felt by the Jews toward Josephus, whom they regarded as a despicable traitor. But the very title of his work, "Concerning the Jewish War," betrays that it was written from the point of view of the Romans (cf. other Roman works such as "Concerning the Punic War" and "Concerning the Gallic War"). Josephus himself, with the help of assistants, then proceeded to translate it into Greek. This help must have been considerable since very few Aramaisms or Hebraisms remain in our Greek text (which is written in an excellent Greek style, far superior to that of *Ant,* which was completed more than a decade later).

The date of the composition of *JW* has usually been given as the end of Vespasian's reign or the beginning of Titus' reign (ca. 79), since it has a negative attitude toward Alienus Caecina, who, after originally deserting to Vespasian, was put to death by Titus for conspiracy (*JW* 4.11.2–3 §634–44). There seems reason to believe, however, that the 7th and last book of *JW* was composed toward the end

of the century during the reign of Domitian, inasmuch as it shows adulation for Domitian (7.4.2 §85–88; there is almost total disregard for him in the first six books) and inasmuch as the rate of elision of final vowels is also markedly different. The book is decidedly incoherent, and parts of it may even have been written in the reign of Nerva or in the early years of Trajan's reign at the end of the century. Moreover, Book 6, culminating in the poignant account of the destruction of the temple, provides an admirable close to the work.

As sources, Josephus, of course, drew upon his own experience as a general in Galilee and later as an adviser to Titus. He also utilized the memoirs of Vespasian and Titus (*Life* 65 §342, 358); it is perhaps to these that Josephus owes his generally accurate topographical information. In addition, Josephus indicates that King Agrippa II orally had provided additional information. Though Josephus agrees with the Talmudic rabbis in condemning the revolutionaries, in stressing the internal division among the Jews, and in describing the terrible famine that afflicted the inhabitants of Jerusalem, he mentions by name only one of them, Rabban Gamaliel; and there is no direct indication of his indebtedness to Talmudic tradition concerning the war. In particular, he disagrees with the rabbis when he omits their mention of the courage of the Jewish captives and when he declares that Titus urged that the temple be spared (*JW* 6.4.3 §241); whereas the rabbis (in agreement with the 4th-century Christian historian Sulpicius Severus) declare that Titus favored its destruction. Josephus' bias may be indicated by the fact that he ignores altogether the fact that during the war many Romans sided with the Jewish revolutionaries (a fact even the Roman historian Dio Cassius noted).

As to the causes of the war, Josephus completely neglects the messianic element (as he does the messianic prophecies in Daniel), broad hints of which are to be found in Tacitus (*Hist.* 5.13) and Suetonius (*Vespasian* 4). Moreover, inasmuch as the other two great revolts against Rome (115–117 and 132–135) were messianic and inasmuch as even Josephus himself describes the appearance of Menahem, the rebel leader, as resembling that of a king (*JW* 2.17.8 §434)—hence like a political messiah—we may guess that there was indeed a messianic aspect to the revolt.

Josephus neglected two other causes of the war. One was the increasing power within Rome of anti-Semitic freedmen of Greek origin who resented the idea of a Jewish "nation within a nation." The second was the pagan resentment of the tremendous Jewish success in winning converts to Judaism, which seemed well on its way to becoming the major religion of the Empire. We may also guess that Josephus, in his eagerness to be apologetic, chose to de-emphasize as a factor the dissension between Jews and non-Jews in Palestine. It has also been suggested that Josephus, who was himself descended from the Hasmoneans, suppressed the connection between them and the revolutionaries he despised. Moreover, like most ancient historians, Josephus pays little attention to the social and economic causes of the war, such as overpopulation, uneven distribution of land, and heavy taxation. In addition, Josephus assigns the blame for the war to one sect, the Fourth Philosophy; whereas the Jerusalem Talmud (*Šabb.* 10.5.29b) ascribes the fall of the temple to the existence of no fewer than 24 sects. Finally, to judge from Josephus, the revolt was foolhardy; whereas actually it would have had a good chance of success if it had enlisted more support among Jews throughout the Empire and in Babylonia and had coordinated its efforts with those of the Parthians and various barbarian tribes.

The turning point of the war was the siege of Jerusalem and the destruction of the temple in 70 C.E. According to Josephus (*JW* 6.4.3 §241) Titus, in a meeting with his staff, urged that the temple be spared. However, although the 4th-century Christian historian Sulpicius Severus was clearly aware of Josephus' account, he, nevertheless, states that Titus decreed the destruction of the temple (*Chronica* 2.30.6–7). Inasmuch as Sulpicius Severus used Tacitus in the chapter just before this, it has been suggested that his source was a lost part of Tacitus' *Hist.* and that this, in turn, was based on a lost work of Antonius Julianus, who was actually present at Titus' council (*JW* 6.4.3 §238). Both the Talmud (*Git.* 56b) and Dio Cassius (6.65) support Josephus' account; and the proem to the poem of Valerius Flaccus likewise seems to accord with it, since it speaks of Titus' conquest of Jerusalem "as he hurls the brands and spreads havoc in every tower," the most prominent building in Jerusalem being the temple. Moreover, Josephus seems to contradict himself when he states that it was Titus who ordered the city and the temple to be burned (*JW* 7.1.1 §1) and when he likewise declares that Titus captured and set fire to the temple (*Ant* 20.10.5 §250). One cannot therefore avoid the conclusion that in his main account of the destruction of the temple in *JW* Josephus attempted to whitewash Titus by stressing his clemency.

Josephus' spectacular account of the capture of Masada has been the subject of much scholarly debate. The recent excavations of the site by Yadin have, on the whole, confirmed Josephus' reliability; indeed, the very name of the Sicarii leader who defended the fortress, Ben-Jair, has been found inscribed on a potsherd. There are some discrepancies, however: (1) Josephus says that Herod's palace was on the W slope, whereas actually it is on the N slope; (2) he says that the columns of the palace were monolithic, whereas in actuality they were made up of several sections; (3) the Roman siege works are much more complicated than those mentioned by Josephus; (4) the fact that some of the casement apartments were found burned while others were not contradicts Josephus' statement that all of them were burned; (5) Josephus says that the food of the defenders had been burned, whereas Yadin found that some of it had been preserved; (6) Josephus says that there were 960 who committed suicide, whereas Yadin found only 25 skeletons; (7) Yadin found 11 ostraca with names inscribed on them, whereas Josephus (*JW* 7.9.1 §395) says that 10 were chosen by lot for the gruesome task of killing the rest; and (8) Josephus makes no mention at all of the connection between the Sicarii of Masada and the Dead Sea sect, whereas the discovery of a scroll of liturgies based on the peculiar calendar of the Qumran sect strongly indicates a connection.

Of course, Josephus was not present at Masada; and he admits that his account is based on the evidence of a single woman who had managed to hide and thus to survive (*JW* 7.9.2 §404). We may also note that Josephus, who hardly admired the intellectual power of women, describes her as

"superior in sagacity and training to most of her sex." Moreover, Josephus was so fiercely hated that he had to be careful of what he wrote. In addition, there must have been many Romans (and Jewish captives who had assisted them) who had participated in the siege who could challenge any misrepresentation made by Josephus. If in this account Josephus intended to raise the stature of the Roman commander, Flavius Silva, a member of the same imperial family which had adopted him, he could have done so much more effectively by depicting the Jewish defenders as fighting to the last man instead of committing suicide. Finally, Josephus declares that the Romans, upon entering Masada, acknowledged the greatness of the daring of the Sicarii, the nobility of their resolve, and their contempt for death (*JW* 7.9.2 §405–6). Josephus would have been loath to make such a statement in view of his negative evaluation of the Sicarii as among the most despicable of the five revolutionary groups (*JW* 7.8.1 §262). Therefore his account of the fall of Masada is all the more likely to be true.

Of course, the two speeches which Josephus puts into the mouth of Eleazar ben-Jair are artificial and belong to the tradition of most classical historians. In ben-Jair's second speech the presence of passages closely corresponding to Posidonius, Euripides, and particularly Plato (e.g., on the relationship of body and soul and on the nature of immortality, especially as couched in Platonic and Stoic phraseology) support the view that these speeches were penned in Josephus' scriptorium, presumably with the help of his Greek assistants. It would seem unusual for Eleazar ben-Jair, a member of a sect known for its extreme piety, to have such an intimate knowledge of Plato, especially since, as Josephus says, pious Jews were utterly antipathetic toward the study of other languages and literatures (*Ant* 20.12.1 §264). The propriety of suicide was much debated at this very time in Greek and Roman philosophical circles; and Josephus' discussion may well be directed toward this audience.

As to whether the suicide itself actually took place, it has been objected that the Sicarii, as pious Jews, must have realized that suicide would be a terrible sin according to Jewish law—technically, no less than murder—and that it could only be justified when one was certain that he would be forced to worship idols, commit murder, or engage in an illicit sexual act (all this was later codified in Jewish law, but none of it applied at Masada). As guerrillas, moreover, the Jews should have fought to the last man, especially since they were well armed and had plenty of water and food. However, we should note that the number of defenders could hardly have exceeded 200 to 300 (since the 967 people at Masada included women and children) and that the Sicarii were pious in their own peculiar way and followed their own Halakah, just as they did when they engaged in a raid on Passover (*JW* 4.7.2 §402), when such attacks would normally be prohibited. There was, moreover, a precedent for the mass suicide, namely, that at Gamala (*JW* 4.1.10 §79–81), where more than 5000 took their own lives. Finally, we must remember that the Sicarii were fanatics who were no longer acting rationally. It has been suggested that perhaps the Romans murdered the defenders and that Josephus attempted to cover up for them as he did for Titus in connection with the burning of the temple. But the fact that the Sicarii were admired by the Romans—a statement one would never expect from Josephus—would seem to militate against such a theory.

2. *The Jewish Antiquities.* Written about a decade after *JW*, Josephus' *Jewish Antiquities* (= *Ant*) sets out to survey the history of the Hebrew people from their biblical beginnings up to the time of the Jewish War of 66–70 C.E. Josephus' treatment of biblical episodes is noteworthy insofar as it raises questions about the type of biblical text he used and the type of interpretation he practiced. His treatment of postbiblical events is noteworthy because it sheds some light on an otherwise poorly attested period. His treatment of 1st-century events is noteworthy because in some places it overlaps with the early chapters of *JW* and because it provides independent testimony to important NT persons and events.

a. The Biblical Period. Josephus' opening statement, that he will set forth the "precise details" of what is written in the Scriptures, "neither adding nor omitting anything," (*Ant* 1. Proem 2 §5) has occasioned much amazement, since he has modified the Bible, sometimes drastically, on almost every page. The question of the meaning of Josephus' statement is of great importance, since it involves the issue of how much liberty one was permitted in interpreting the Bible during this period. It is unsatisfactory to say that Josephus was counting on the ignorance of his readers since the Jews of the Diaspora certainly knew the LXX, which they believed to be divinely inspired and which differs drastically in many places from Josephus' paraphrase. Moreover, Pseudo-Longinus' (9.9) highly laudatory—and casual—paraphrase of Gen 1:3, 9, 10 in a work of literary criticism dating presumably from the 1st century C.E., shows that the LXX was well-known; the vast number of converts to Judaism during the two centuries before Josephus would seem to indicate that it was widely used by Jewish missionaries.

Others have suggested that the phrase "neither adding nor omitting anything" is a traditional and meaningless way of affirming one's accuracy, as may be seen by its use by Dionysius of Halicarnassus in the 1st century and by Lucian in the 2d century. That Josephus' phrase is not necessarily to be taken literally would seem to be indicated by the fact that the gospel of Matthew uses similar language (in 5:17–18), even though portions of the law *were* in fact abolished by Jesus' disciples in his own lifetime.

Actually the phrase is taken from Deut 4:2: "You shall not add to the word which I command you, neither shall you diminish from it, that you may keep the commandments of the Lord your God which I command you." Josephus understood the phrase in the sense which is apparent from this verse and which accords with rabbinic exegesis; namely, that one is not permitted to add to or subtract from the *commandments* and that one is permitted latitude in interpreting only the narrative portions of the Pentateuch. An alternative suggestion is that Josephus included in "Scriptures" not only the written Bible but also Jewish tradition generally. This would imply that some of the midrashic interpretation of the Bible had been committed to writing by Josephus' time, since we find midrashic materials in such Hellenistic Jewish writers as Artapanus, Eupolemus, Ezekiel the tragedian, and Philo. While such a statement four decades ago would have been consid-

ered most unlikely (inasmuch as the earliest rabbinic midrashic commentaries on the Bible date from a century after Josephus', we now have midrashim among the Dead Sea Scrolls dating from the century *before* Josephus which he parallels at several points. To this may be added the midrashim in the work ascribed to Philo entitled *Biblical Antiquities*, which is apparently contemporaneous with *Ant.*

Moreover, there would seem to be a precedent for modifying the sacred LXX text which Josephus (*Ant* 1. Proem 3 §10) cites as justifying his presentation of biblical history to gentiles. Even the rabbis (*Meg.* 9a), in obvious praise, refer to the miraculous way in which the translation was accomplished, despite the fact that deliberate changes were made in the process of translation. The fact that three major recensions had emerged by the time of Jerome, despite the curse placed on those who ventured to add, or transpose, or subtract (*Let. Aris.* 306), shows that the curse was not taken too seriously.

When we examine how Josephus handles the actual biblical narrative, we find that he had two audiences in mind. The fact that he cited the LXX as a precedent for his work shows that he was directing his work to gentiles with apologetic intent, since that translation originally had been commissioned by King Ptolemy Philadelphus. Indeed, he specifically declares (*Ant* 1. Proem 2 §5) that his work was undertaken in the belief that the whole Greek world would find it worthy of attention. Again, at the very end of the work, he boasts that no one else would have been equal to the task of issuing so accurate a treatise for the Greeks (*Ant* 20.12.1 §262). On the other hand, we should also expect that Josephus would seek a Jewish audience for his work, since it would seem that the majority of the Jews in the Mediterranean world were Greek speaking; hence they would be a natural audience for his work. Indeed, that Josephus has a Jewish audiences in mind for his treatise is indicated by the fact that he highlights certain episodes—notably the incident of Israel's sin with the Midianite women (Num 25:1–9), which he expands greatly (*Ant* 4.6.7–12 §§131–35), and Samson's relations with foreign women (Judg 14:1–16; *Ant* 5.8.5–12 §§285–317)—in order to combat the increasing assimilation of Jews with gentiles.

In this portion of his narrative, there are many details shared with his presumed contemporary Pseudo-Philo, apparently indicating a common source used by both (whether written or, more probably, oral). Josephus' tendency to give names and other such details which are missing in the Bible (e.g., the name of the man who inspired the building of the Tower of Babel [Nimrod], and the name of Pharaoh's daughter who adopted Moses [Thermuthis]) may be due to the influence of rabbinic midrashim. The same details are sometimes found in certain pseudepigraphic works such as *Jub.* and *L.A.B.* and in such sectarian works as the Samaritan Asatir and 1QapGen. In addition, Josephus seems to have employed a Hellenistic Jewish tradition. In particular the Hellenistic Jewish writers might have provided Josephus both with an excellent precedent for rewriting the Bible and with a stylistic model (though he does not cite their works as a forerunner for his own). This would have been especially true of Philo, who writes such excellent Greek. However, Josephus mentions Philo only once (*Ant* 18.8.1 §259–60) and refers to other Jewish writers on only one other occasion (and even then he refers to them as if they were pagans; *AgAp* 1.23 §218). Nevertheless, it is noteworthy that Philo's question as to why the Torah begins with creation rather than with the laws (*Op* 1.1–3) is paralleled in *Ant* 1. Proem 4 §21 and also that Philo's description of Abraham's attack on the Assyrians (*Abr* 40.230–35) is paralleled in *Ant* 1.10.1 §177. Furthermore, Philo's interpretation of the names Abel and Ishmael (*Migr* 13.74; *Mut* 37.202) is paralleled in *Ant* 1.2.1 §52 and 1.10.4 §190, while Philo's allegorical interpretation of the tabernacle and priestly garments (*Vita Mos* II.18, 21, 24) is closely paralleled in *Ant* 3.7.7 §179–87. Hölscher (PW 9) held that Josephus' single source was a Hellenistic Jewish midrash, a claim that seems extreme, especially since we have no trace of such a work.

We must not, however, exclude the possibility that Josephus introduced details of his own, particularly for apologetic reasons. In particular the fact that his portraits of such biblical personalities as Abraham, Moses, Samson, Saul, David, and Solomon are consistent in emphasizing their cardinal virtues (as well as the dramatic and erotic elements) and in de-emphasizing theological and magical elements would seem to indicate a personal imprint rather than a stage in the development of the midrashic tradition. In view of the fact that during the many years he lived in Rome Josephus apparently had no occupation other than writing and that he apparently composed an average of only about ten lines a day, we should expect a careful and consistent composition. We may also discern the influence of contemporary events upon Josephus' reconstruction of the biblical past. For example, his elaboration of the sacrifice of Isaac seems to have been influenced by the martyrdom during the Maccabean revolt. In his elaboration of the story of his namesake, Joseph, who likewise was accused falsely, Josephus seems to have portrayed himself. He likewise appears to have identified personally with the prophet Jeremiah, who also suffered at the hands of his fellow Jews, as well as with Daniel, Esther, and Mordecai, who suffered for their convictions. Moreover, he seems to have identified himself with King Saul, whom he viewed as a martyred general like himself.

An important question centers around the issue of the biblical text that Josephus had at his disposal. It is important because the answer would help shed significant light on the state of the text in 1st-century Palestine, almost a millennium before our first extant complete Hebrew manuscript. Josephus seems to have had in his possession texts in Hebrew, Aramaic, and Greek; and he varied in his use of them from biblical book to book. In view of the fact that in Josephus' time there were a number of divergent Hebrew and Greek texts of the Bible, we cannot be sure which version he used at any given time, especially since he usually paraphrased and elaborated rather than translated. Nor must we discount the possibility that Josephus followed a tradition independent of both the MT and the LXX, as may be seen from the fact that he agrees with Pseudo-Philo in some places that diverge from both the MT and the LXX.

The fact that Josephus was himself writing in Greek would make it seem likely that his chief textual source was the LXX, especially since he cited it as a precedent for

presenting the history of the Jews to a non-Jewish audience (*Ant* 1. Proem 3 §10–12) and since he devoted so much space paraphrasing the account of the translation given in *Let. Aris.* (*Ant* 12.2.1–15 §11–118), hardly what one would expect in a work which is essentially a political and military rather than a cultural and religious history of the Jews. And yet, the very fact that he paraphrased the Bible in Greek would seem to indicate that he hoped to improve on that rendering, since there would hardly be much point otherwise in a new version. Hence it is not surprising that where the style of the LXX is more polished, as in the Additions to Esther or in 1 Esdras, he adheres more closely to its text. And yet, to have ignored the LXX, in view of the tremendous regard in which that version was held, would have been looked upon as an attempt to hide something. Nevertheless, even when Josephus agrees with the LXX, this is not necessarily an indication that he had the LXX text before him, since he may have incorporated an exegetical tradition which had been known earlier to the translators of the LXX. Finally, the biblical texts found at Qumran indicate that the differences between the Hebrew and the Greek texts were not so great as had been previously thought.

As to Josephus' possible use of an Aramaic Targum, we must not forget that Aramaic was Josephus' mother tongue, as it was for Jews generally in Palestine at that time. While it is true that the earliest Targum, that of Onkelos, dates from the 2d century C.E., no doubt the practice of translating the Bible into Aramaic was much older; indeed, the fact that its origin is attributed to Ezra in the 5th century B.C.E. (*Meg.* 3a) meant that it had the sanctity and the authority associated with the great Ezra, the second Moses (*t. Sanh.* 4.7). The very fact that the Targums, at least as we know them, permit themselves considerable latitude in paraphrasing the text must have attracted Josephus to them. If Josephus is indeed much freer in vocabulary, style, order, and content in his rendering of biblical material in the first five books of *Antiquities* than in Books 6–11 (as seems to be the case), it may well be that the reason for this is the availability of Targums for these earlier books. Josephus probably utilized a Hebrew text and/or an Aramaic Targum as a basis for his elaboration of the books of the Pentateuch, especially since Josephus probably heard a portion of the Pentateuch read weekly in the synagogue, along with a Targum. And yet, where he seems to be following the Hebrew, this may be due merely to an attempt to avoid using the same word as the LXX (cf. his paraphrase of *Let. Aris.*, where he is almost pathological in avoiding the same language).

In the book of Joshua, Josephus seems closer to the MT; whereas for Judges and Ruth he is relatively free, perhaps because he was using a Targum. The most interesting case is that of the book of Samuel, where, to judge from the Dead Sea fragments, Josephus favored a Greek text in a Proto-Lucianic version, though not to the total exclusion of the Hebrew, since, at the very least, he heard portions from Samuel during readings of the *haftaroth* in the synagogue on seven Sabbaths and holy days. To say, as does Kahle (1959: 229–37), that Josephus agrees with Proto-Lucian because Christian copyists modified his text (as they presumably did Philo's quotations from the Bible) is to fail to explain why these copyists restricted their revisions to only certain books of the Bible. For Ezra, Josephus particularly (but not exclusively) employed the apocryphal book of Esdras because of its superior Greek style, its elimination of some chronological difficulties, and its romantic interest in the debate as to whether wine, the king, or a woman is most powerful. For Esther, Josephus used a Greek text, notably because he found it to be stylistically more polished than the rest of the Greek Bible.

As to the changes which Josephus made in his version of the biblical narrative, Josephus declares in his preface that he proposes to set forth the details in their proper order *(taxin)*, using a military term implying a battle array (as if he were about to marshal troops in literary battle, presumably against anti-Semites). Whereas Moses, he says, had left his writings in disarray, just as he had received them from God (*Ant* 4.8.4 §197), we see that Josephus rearranged them following the "thematic" school of a number of Hellenistic historians, thus juxtaposing those items which belonged together on the basis of subject, regardless of chronology and source, and removing theological difficulties and contradictions inherent in the narrative. For example, he substitutes the verb *ektisen*, "founded" for the LXX's *epoiēsen*, "made" to avoid the impression that God created the world out of preexistent matter (*Ant* 1.1.1 §27). Similarly, he omits the plural verb in "let us make man in our image," since it would seem from this that God was a plurality of powers or had assistants (*Ant* 1.1.1 §32). Again, when he deals with chronological difficulties in the biblical ascription of unusual longevity to the patriarchs, he cites precedents in Greek and non-Greek literature and furthermore rationalizes by noting other factors, such as their diet, which contributed to their long life spans (*Ant* 1.3.9 §107–8); yet even here he closes as do Herodotus and other ancient historians, with the formula, "On these matters let everyone decide according to his fancy." Again, he often seeks to avoid anthropomorphisms, such as the one implied in the Hebrew word *měraḥepet*, "moving" (Gen 1:2; cf. *Ant* 1.1.1 §27). Sometimes his goal is to provide better motivation or to eliminate obscurity, as in his explanation of the "strange" fire (Lev 10:1) which Nadab and Abihu brought (*Ant* 3.1.7 §209). Sometimes he is concerned with how his work will sound to the ear; hence, for example, he says that he is inclined to omit the names of the 70 descendants of Jacob who went down to Egypt because they would sound strange to a Greek ear but that he includes them, nonetheless, only in order to refute the anti-Semitic charge that the Israelites were of Egyptian rather than of Mesopotamian origin (*Ant* 2.7.4 §176–77). Another goal is to enhance the sense of drama, so that, for example, he adds that Samuel was tossing with sleeplessness the night God instructed him to select a king (*Ant* 6.3.3 §37). Moreover, Josephus increases the irony, for example, by using the word for happiness on five occasions in the brief pericope describing Abraham's intended sacrifice of Isaac (*Ant* 1.13.1–4 §222–36). Josephus uses allegory only occasionally, perhaps in reaction to Philo; one case, however, where he does appeal to allegory is in explaining various articles in the temple (*Ant* 3.7.7 §179–87). Finally, Josephus, in reformulating the biblical narrative, focuses to an even greater degree on certain key personalities, such as Abraham, Joseph, Moses, Samson, Saul, David, and Solomon.

As to Hellenizations in *Ant,* Thackeray (1929: 100–124) devised a kind of Documentary Hypothesis for the later books, postulating that for Books 15 and 16 Josephus had an assistant who had a particular love of Greek poetry, especially Sophocles, and for Books 17 through 19 another assistant who had a penchant for Thucydides. The truth is, however, that there are many Sophoclean and Thucydidean elements in the earlier books as well. Moreover, while Josephus (*AgAp* 1.9 §50) admits that he had helpers for *JW* (presumably his first published work), he says nothing about such for *Ant.* Indeed, many of the Sophoclean and Thucydidean phrases may have come to him through other writers he knew, notably Dionysius of Halicarnassus. Finally, whereas he may have needed assistants to help him with the Greek of *JW,* which he wrote shortly after his arrival in Rome, he must have improved his knowledge of Greek during the intervening years preceding his completion of *Ant.*

In his rewriting of the Bible, Josephus is clearly indebted to the Greek tragedians. Thus the paradoxical juxtaposition of *apora* and *porima* (*Ant* 1.14 Proem 3 §14) is found in only one other ancient author (Aesch. *PV* 904). Josephus' indebtedness to Sophocles is seen in his extrabiblical statement, so reminiscent of *Oedipus the King,* that all were mentally blinded as by a riddle in finding a solution to the problem confronting King Solomon. We may add that especially in the account of the binding of Isaac (*Ant* 1.13.1–4 §222–36) there are many reminiscences of Euripides (esp. Eur. *IA*), who was the most popular dramatist of the Hellenistic period.

Josephus' developed picture of the original bliss of mankind (*Ant* 1.1.4 §46) is clearly indebted to Homer and Hesiod, as is the phrase that Isaac was born on the threshold of Abraham's old age (*epi gērōs oudōi; Ant* 1.13.1 §222). The concept of a periodic destruction of the earth alternately by fire and water has its parallel in Plato (*Ti.* 22C), though it is found in rabbinic sources as well. Josephus' indebtedness to Herodotus (2.75) is manifest in his description of the ibis that helped put to flight the winged serpents encountered on the march through the desert to Ethiopia (*Ant* 2.10.2 §247). Occasionally direct comparisons with pagan sources are possible. Thus Josephus would have his readers compare Noah's Flood with that of Deucalion, implied by the fact that he used the same word for God's giving of advice to Noah (*hypothemenou; Ant* 1.3.2 §76) as is employed for Prometheus' giving of advice to Deucalion (Apollodorus 1.7.2); this is confirmed by the fact that instead of LXX *kibōtos,* Josephus uses the word *larnax* for Noah's ark, the same word Apollodorus used for Deucalion's ark.

The most striking form of Hellenization occurs in Josephus' description of biblical heroes (Abraham, Joseph, Moses, Samson, Saul, David, Solomon, Esther) in terms of the four cardinal virtues, the external qualities such as good birth and handsome stature, and the spiritual attribute of piety. Josephus' motives may well have been apologetic since the Jews had been accused of being misanthropic and of having failed to produce marvelous men (*AgAp* 2.12 §135). Thus, for example, Josephus omits the scene where Hagar weeps after having been cast out by Sarah (Gen 21:16; cf. *Ant* 1.12.3 §218), since such a scene might support the charge that Abraham lacked piety. In response to the blood libel with which the Jews had been charged (*AgAp* 2.8 §91–96), Josephus inserts a speech wherein God declares that he does not crave human blood, in direct contrast to Artemis, who rejoices in human sacrifice (Eur. *IA* 1524–25).

Moreover, in his biblical modifications, Josephus appeals to political, military, and geographic interests. Thus, in his version of the rebellion of Korah (*Ant* 4.2.1 §12), he stresses the theme of civil strife *(stasis),* so familiar to readers of Thucydides (3.82–84). Likewise, Josephus' graphic description of the sequence of luxury, voluptuousness, love of gain, gross recklessness, disdain for order and for the laws, and grave sedition corrupting the aristocracy (*Ant* 5.2.7 §132–35) is one familiar to readers of Polybius and Livy.

Josephus likewise appeals to the philosophical interests of his readers by comparing the religious groups of the Jews to the Greek philosophical schools (*Life* 2 §12; *Ant* 15.10.4 §371). In particular, since Stoicism was the favorite philosophy of Hellenistic intellectuals, he frequently employs Stoic terminology; thus the key Stoic word *pronoia,* "providence," appears no fewer than 74 times in the first half of *Ant.* Moreover, Josephus goes out of his way in his paraphrase of the book of Daniel to note how mistaken are the Epicureans, who exclude providence *(pronoian)* from human life (*Ant* 10.11.7 §278).

Josephus also introduces a number of typical dramatic motifs, in particular the concept of *hubris* ("insolence," "overweening pride") and its consequences. For example, he describes the generation of the Tower of Babel in terms of the typical tragic sequence of prosperity, insolence, and punishment (*Ant* 1.4.2 §113). Likewise, he condemns Haman for not bearing his good fortune wisely and for not making the best use of his prosperity with prudent reason (*Ant* 11.6.12 §277), terms familiar to Greek tragedy. An indication that Josephus is thinking of the language of tragedy may be seen in his comment (in connection with Saul's slaughter of the priests of Nob) that it is characteristic of men, when they attain power, to lay aside their moderate and just ways "as if they were stage-masks" (*Ant* 6.12.7 §264).

Finally, to make his narrative more appealing, Josephus introduces romantic motifs reminiscent of Homer, Herodotus, Xenophon, and Hellenistic novels. The erotic motif is particularly evident in Pharaoh's meeting with Sarah (*Ant* 1.8.1 §165), in the infatuation of Potiphar's wife with Joseph (*Ant* 2.4.2–5 §41–59), in Moses' marriage to the Ethiopian princess (*Ant* 2.10.2 §252–53), and in the account of Ahasuerus' actually falling in love with Esther (*Ant* 11.6.2 §202).

On the other hand, despite the fact that Josephus admits his theological and moralistic purpose in his preface, he actually downplays the theological element in *Ant.* Thus he gives a purely practical reason for circumcision—namely, the desire to prevent assimilation—rather than the connection with the covenant between God and Abraham (Gen 17:10–11; cf. *Ant* 1.10.5 §192). Again, whereas the rabbis have Abraham appeal to Isaac to sacrifice himself for the sanctification of God's name, in Josephus Abraham makes no such appeal (*Ant* 1.13.3 §228–31). Moreover, in his version of Samson, Josephus omits miraculous details and thus diminishes the role of God. In addition, most strik-

ingly, in his entire adaptation of the narrative of Ruth, Josephus nowhere mentions God, whereas there are 17 references to God in the biblical story. That Josephus does not de-emphasize the role of God in his account of Moses may be due to the fact that the Greeks believed that great leaders, such as the Spartan Lycurgus, had to be divinely directed. Again, whereas in the book of Esther there is not a single reference to God, the LXX and Josephus, for apologetic reasons, supply this lack in several places. As to miracles, Josephus frequently tells his readers to make up their own minds—a formula found in Herodotus, Thucydides, and many other ancient historians.

b. The Postbiblical Period. Josephus' account of the postbiblical period is very uneven. There are some figures (such as Herod) or events (such as the accession of the Roman emperor Claudius) for which he provides extraordinary detail; there are others—e.g., the period from Ezra to Alexander—for which he is extraordinarily skimpy. This brevity may be explained most simply by postulating that Josephus had few sources for this period; but two other factors may have been at work: (1) the Jews had achieved almost nothing of importance; and (2) Josephus, bearing in mind that his history would consist of only 20 books, sought to emphasize the period of the Hasmoneans, his ancestral family, and their rivals, the Herodians.

As for Alexander, the fact that Josephus' account of Alexander's meeting with the high priest (*Ant* 11.8.5 §329–39) is closely paralleled by the account in the Samaritan. Second Chronicle of the meeting between Alexander and the Samaritan high priest would seem to confirm its historicity. The notion that Jerusalem was at that time hardly worth visiting is not convincing; the fact that the oldest Gk and Lat sources do not mention such a visit and the suggestion that Josephus introduced it for merely apologetic reasons are hardly conclusive, since the Talmud and Samaritan sources quite independently have a similar tradition.

Josephus' extensive summary of *Let. Aris.* is remarkable for the fact that although it closely adheres to the content of the original, it constantly modifies the language, particularly with Stoic terminology, so that there is only one instance where as many as 12 words of the original have been retained. We may wonder why Josephus, in a history of the Jews, devotes such an inordinately long space to what is, at best, a peripheral historical incident; but Josephus' aim may well have been to provide a precedent for an appeal to the Flavians to allow the Jews to practice their ancestral religion (this time after the disastrous revolt against Rome). The changes that are made are intended primarily to render the account less offensive to non-Jews.

Josephus likewise closely parallels 1 Maccabees (*Ant* 12.5.2–13.6.6). Differences may be explained either by the hypothesis that Josephus had both a Hebrew and a Greek text, or that he had only a Greek text, probably in a more accurate and full form than ours, which he adapted for his Greco-Roman readers. In addition, however, as a descendant of the Hasmoneans, Josephus must have had access to oral traditions and was, at times, more objective than the author of 1 Maccabees, who was closer in point of time to the events themselves. Josephus' additions are generally geographical and topographical; and they supply the names of participants, the number of casualties, and motives, perhaps obtaining this information from a Hellenistic historian (presumably Nicolaus of Damascus). Josephus has also increased admiration for his ancestors Mattathias and Judas. Finally, Josephus, in his attempt to differentiate between the Maccabees and the revolutionaries of his own day, has emphasized the ideal of martyrdom; whereas 1 Maccabees attributes the victory to God, Josephus attributes it to the piety of the soldiers. One mystery is Josephus' failure to use the last three chapters of 1 Maccabees, whether because they were missing from Josephus' copy or because Josephus viewed Nicolaus of Damascus as a superior source from that point on. And yet, it is surprising that Josephus used Nicolaus as much as he did, since the latter (as Herod's secretary) was presumably opposed to Josephus' Hasmonean ancestors. To say, as some scholars have, that Josephus has no independent value for this period is to deny what seems most reasonable, namely that Josephus, as a direct descendant of the Hasmoneans, had oral traditions from his family.

Among Josephus' major sources for the Roman period were the decrees apparently available either from the imperial archives in Rome, or through Nicolaus of Damascus, or through Josephus' close friend Agrippa II. Most scholars accept their authenticity, even though Josephus' version often does not correspond with the style known to us from inscriptions and despite the invitation to the reader to check their accuracy (this is a mere formality, since in antiquity it was very difficult to locate any given piece of information because of inadequate filing systems).

There is no figure in all antiquity about whom we have more detailed information than Herod; and by far our chief authority is Josephus, whose main source was Nicolaus of Damascus. Josephus himself, as a Hasmonean, is clearly prejudiced against Herod, particularly in *Ant,* basing himself perhaps on oral traditions derived from his Hasmonean ancestors, Herod's bitter opponents. Most studies have confirmed the disparaging picture rendered by Josephus; but the recent magisterial work by Schalit (1968) attempts to rehabilitate him as one who sincerely believed that the Jews could attain peace and prosperity only through cooperating with the Pax Romana. However, despite Josephus' judicious comments, we may question whether or not the Jews were, in fact, far more prosperous at the end of Herod's reign (4 B.C.E.) than they were at the beginning (37 B.C.E.) and whether or not his vast building program solved the problem of unemployment. If Herod was really well-disposed toward Rome, we may well ask why Josephus, who was similarly so loyal, should have been so negative toward him. Also if Herod claimed to be the Messiah, as seems clear from Epiphanius, we may ask why Josephus, in his bitter and exhaustive account, did not mention this, since a political messiah by definition would be a rebel against the Roman Empire, and this would have defamed Herod's reputation completely. Yet we would seem to be justified in viewing skeptically Herod's account of how Cleopatra had attempted to seduce him and how he was dissuaded only with difficulty from killing her (cited in *Ant* 15.4.2 §97–103). Such a story may well have arisen when Herod attempted to enter the good graces of Octavian, who had come to power after defeating Antony and Cleopatra.

Occasionally we are fortunate enough to be able to check

Josephus' account of specific incidents. One example is in connection with the expulsion of the Jews from Rome in 19 C.E. (*Ant* 18.3.5 §81–84). Josephus would have us believe that the Jews were expelled because four Jewish scoundrels pocketed for themselves the gifts for the Jerusalem temple which a certain noble Roman proselyte named Fulvia had entrusted to them. It seems hard to believe that Tiberius, who was the emperor at this time and who was noted for his strict adherence to legal procedure, would have expelled all the Jews without a trial because of the misdeeds of a few. More credible is the account of Dio Cassius (57.18.5a) that the Jews were expelled because of their success in converting to Judaism so many Romans, including some of high birth. In view of the offense, Tacitus (*Ann.* 2.85) seems to imply more plausibly that the expulsion was restricted to proselytes—those "tainted with this superstition." In view of the fact that the Jews had on an earlier occasion (139 B.C.E.) likewise been expelled from the city because of proselyting activities (Val. Max. 1.33), Dio's account seems preferable to that of Josephus; thus the key to the incident is what Josephus mentions only incidentally—the fact that Fulvia was a proselyte.

As for the period of the procurators (1st century C.E.), we are fortunate to have another account with which to check Josephus' report of an incident associated with Pontius Pilate (*Ant* 18.3.1 §55–59; *JW* 2.9.2–3 §169–74). However, this second account (Philo *Gaium* 18 §299–305) is so different that the question has been raised as to whether it refers to the same incident as Josephus. In Philo, Pilate brings into Jerusalem shields without images; whereas in Josephus he brings in standards with images. In Philo the incident occurs after several years of misrule by Pilate, whereas in Josephus it comes at the beginning of his procuratorship. In Philo the people appeal unsuccessfully to Pilate, apparently in Jerusalem; whereas in Josephus they appeal successfully in Caesarea. In this case, though Philo is contemporary with Pilate and less involved, he is probably less reliable than Josephus, since he is writing, presumably from hearsay, an apologetic work about events which occurred some distance from his home.

We may well wonder why Josephus devoted so much space to an account of the assassination of the emperor Caligula and the accession of Claudius (*Ant* 19.1.1–4.6 §1–273), events only tangentially related to Jewish history, especially in light of the fact that there is not much of a parallel account in *JW* (2.11.1–5 §204–14; there are usually extensive parallels to almost all other incidents). We may suggest that the key is Josephus' friendship with Agrippa II, the son of the man (Agrippa I) who, according to Josephus, was responsible for Claudius' assumption of the throne. To some degree the length of the narrative may be due simply to the availability of an extensive narrative, whether by Cluvius Rufus, as Mommsen (1870) conjectured, or in other sources, notably details derived orally from Agrippa II.

c. Josephus and Christian History. The chief reason why Josephus' works have survived in their entirety is that they contain references to John the Baptist, to James the brother of Jesus, and, above all, to Jesus himself (the so-called *Testimonium Flavianum;* see below).

There can be little doubt as to the authenticity of Josephus' reference to John the Baptist (*Ant* 18 §116–19), especially since the language is particularly typical of this part of *Ant,* since it contains two different forms of the word *baptism* (which an interpolator would almost certainly have avoided), since it is approximately twice as long as the Jesus passage and yet has no reference to the connection between John and Jesus, and, above all, since the reason given for John's death contradicts the Gospels. Moreover, the 3d-century Origen, who explicitly states that Josephus did not believe in Jesus as Christ, cites this passage. As to the relative lengths of the passages about John and Jesus, it may be that John was originally the more important of the two or that Josephus was wary of speaking about messianic movements, such as the one connected with the name of Jesus, inasmuch as this ipso facto involved revolt against Rome. As to the discrepancy between Josephus and the Gospels, one possible solution is to suggest that the two accounts supplement one another: the Christians, as moralists, emphasized that John had provoked Herod Antipas with his moral rebuke (Mark 6:17–18); but Josephus, as a political historian, stressed that John had been executed because it was feared that, with his ability to attract crowds, he would lead a revolt. In any case if the passage about John had been interpolated by a Christian, we would have expected some reference to John's connection with Jesus. Finally, Josephus' account seems to be historically valid; since he praises him as a "good man," we should have expected Josephus to agree with the Gospels in giving the cause of John's death; whereas the political charge against John clearly embarrassed Josephus, who so fiercely opposed all revolutionary stirrings.

Most scholars have regarded the so-called *Testimonium Flavianum*—Josephus' reference to Jesus Christ—as interpolated, at least in part. In this passage (*Ant* 18.3.3 §63–64) Josephus notes that during the procuratorship of Pontius Pilate "there lived Jesus, a wise man, if indeed one ought to call him a man." He reports that he accomplished surprising feats, and taught many people, and "won over many Jews and many Greeks." The text then baldly claims that "he was the Messiah" and reports how Pilate had him crucified and how, on the third day, he appeared alive to those who loved him, as had been previously prophesied. We should note, however, that aside from this passage and possibly those about John and James, there are no other passages in Josephus the authenticity of which has been questioned; therefore the burden of proof rests upon anyone who argues that these are later interpolations.

Though this passage is found in all the Gk mss of Josephus (the earliest of which, to be sure, dates from the 11th century) and in all the versions (including the Lat translation of Cassiodorus, which dates from the 6th century), Origen, who cites five passages also from Book 18 of *Ant,* expresses wonder that Josephus did not admit "Jesus to be the Christ" (*comm. in Mt.* 10.17) and elsewhere states that Josephus "disbelieved in Jesus as Christ" (*Cels.* 1.47). The implication of these statements is that in the 3d century Origen could find in *Ant* some passage about Jesus but that it was basically neutral (if it had been negative, Origen probably would have attacked Josephus sharply instead of merely expressing wonder). Moreover, the fact that Josephus refers to Jesus in his reference to James the brother of "the aforementioned Christ" (*Ant* 20.9.1 §200)—a passage the authenticity of which has been almost

universally acknowledged—indicates that Jesus had been mentioned previously.

The fact that there are no fewer than 11 Christian writers prior to the 4th-century Eusebius (who quotes it in three different forms) and no fewer than 5 between Eusebius and Jerome, all of whom knew Josephus' works and yet did not refer to the *Testimonium,* constitutes a strong argument that the passage originally did not exist in its present form. If it had been original, it would have been a powerful argument in polemics against the Jews, especially since one charge (as early as the middle of the 2d century) was that Jesus had never lived at all and was, in fact, a figment of Christian imagination (Just. *dial.* 8). The fact that there was a passage about Jesus in *Ant* may help to explain the Talmud's silence about Josephus, since the very mention of Jesus in a neutral sense would most probably have been frowned upon by the rabbis. Further indications that the original version of the *Testimonium* was different from its present form come from Agapius, a 10th-century Christian Arab, whose version of the *Testimonium* does not read "if indeed we ought to call him a man," omits references to Jesus' miracles and to the role of Jewish leaders in accusing Jesus, states not that Jesus appeared to his disciples on the third day but that his disciples reported this, and (most important) that he was "perhaps the Messiah," rather than "he was the Messiah." This is further reinforced by the fact that another Christian, Michael the Syrian, says, in his (12th-century) version of the *Testimonium,* that Jesus "was thought to be the Messiah" (so also Jerome, *De Viris Illustribus* 13; though one wonders how a believing Christian could have cited such a text without recording a strong reaction against it).

Furthermore, we may note that the passages about John, Jesus, and James (see below) do not appear in the parallel passages in *JW;* and we may therefore be suspicious that the lines about them in *Ant* were interpolated. However, this may be due to the fact that the Christians had become more important in the interval between the publication of the two works. As to the language of the *Testimonium,* Thackeray (1929: 141) has noted the remarkable fact that the phrase "such people as accept the truth gladly" *(hēdonēi)* is characteristic of precisely this portion of *Ant* since we find it eight times in Books 17–19 (allegedly the work of Josephus' Thucydidean assistant) and nowhere else in Josephus. The word *hēdonēi* could hardly have been interpolated by a Christian, since it has a pejorative connotation, though we must be careful not to impute too much significance to the choice of individual words in a passage which consists of two short paragraphs (there are also other places in the *Testimonium* which are characteristic not of Josephus but of Eusebius).

However, if Josephus did insert a passage of some sort about Jesus, we may well ask what his motive was. Laqueur suggested that, having alienated the Jews by his behavior in the war against Rome and by his use of the LXX, Josephus turned to the Christians, who had not participated in the rebellion against Rome and who believed that the LXX was divinely inspired, in the hope that they would purchase his work (1920: 274ff.). But there is no evidence that Josephus needed any further financial support, since he apparently had a very comfortable imperial pension. Furthermore, it seems unlikely that Josephus would have sought to gain the very small Christian audience when it would probably have meant alienating the much larger potential audience of Hellenistic Jews (who also regarded the LXX as authoritative).

As a Jew, Josephus might well have acknowledged someone to be the Messiah without necessarily being excluded from the Jewish fold; but since the concept of messiah at this time had definite overtones of revolution and political independence, Josephus, as a loyal member of the Roman royal family, could hardly have recognized Jesus as such. Indeed, Josephus avoids the use of the term *messiah,* except here and in *Ant* 20.9.1 §200 (also in connection with Jesus).

The passage about the death of James the brother of Jesus (*Ant* 20.9.1) has been regarded as authentic by almost all scholars, since the language is thoroughly Josephan; yet it sharply diverges from the eulogy of the high priest Ananus, as found in *JW* 4.5.2 §319–20. But there are numerous contradictions between the *JW* and the *Ant* passages; and, in any case, Origen in the 3d century did have a text about James, since he explicitly says (*comm. in Mt.* 10.7) that Josephus bore witness to so much righteousness in James (though our *Ant* text has no such direct encomium).

A word may be said about several other passages in Josephus which are paralleled by the NT. Josephus speaks of a census by Quirinius, governor of Syria, at the time when Archelaus was removed from his position as ethnarch in 6 or 7 C.E. (*Ant* 17.13.5–18.1.1); whereas Luke 2:1–5 speaks of the census as taking place at the time of Jesus' birth, near the end of the reign of Herod (4 B.C.E.). It seems hard to believe that there had been an earlier census under Quirinius, since Quirinius is not listed in any source as one of the governors of Syria during the reign of Herod and since, moreover, Josephus (*Ant* 18.1.1 §3) declares that the census shocked the Jews (this implies that it was unprecedented). Moreover, if there had been an earlier census, Josephus would most probably, in accordance with his custom, have made a cross-reference to it.

Furthermore, Josephus mentions a certain Theudas, an impostor who persuaded the masses to follow him in the expectation that he would fulfill his promise that the Jordan river would part at his command but who, together with many followers, was slain by the armed forces of the procurator Fadus (*Ant* 20.5.1 §97–98). Luke likewise mentions a Theudas who was slain and whose followers were dispersed, presumably after attempting a revolutionary movement (Acts 5:36). Despite the chronological discrepancy (Acts sets it before Judas' revolt in 6 C.E., while Josephus sets it ca. 44 C.E.), it is tempting, especially in view of the unusual nature of the name Theudas, to identify the two. Another parallel occurs in connection with the false prophet from Egypt (*JW* 2.13.5 §261–63; *Ant* 20.8.6 §169–72), 400 of whose followers were killed by the soldiers of the procurator Felix (the passage in *JW* gives the number of his followers as 30,000); Acts 21:38 speaks of the Egyptian revolutionary but gives the number of his followers as 4000. See EGYPTIAN, THE.

3. *Against Apion.* In writing his work *Against Apion* (= *AgAp*), published in the last years of his life, Josephus followed the precedent of other Greek apologists. A work attacking the Greeks might well have made a positive impression upon chauvinistic Romans, since Roman intel-

lectuals had ambivalent feelings toward the Greeks, who had been their mentors in almost every field. It has also been conjectured that Josephus was particularly eager to defend his Jewish countrymen against anti-Semitic movements in order to win his way back into their good graces after his disgraceful surrender to the Romans. A third purpose may have been to supply a handbook to Jewish missionaries and propagandists in their efforts, which in Josephus' day were notably successful, though there was no way in antiquity for books to be produced in large numbers.

Josephus was not the only Jewish apologist of his day, as is clear from the fact that Philo wrote similar works (*In Flaccum* and *Hypothetica*); indeed, the latter work, in its brief summary of Jewish law, seems to have served as a model for the second part of *AgAp* (2.14 §145–41, §295). In addition to Philo, another forerunner of Josephus was Dionysius of Halicarnassus, whose *Roman Antiquities*—especially its encomium of Rome (Dion. Hal. *Ant. Rom.* 1.4–2.29)—apparently served as a model for *Ant* (at least in title and in number of books). Both Dionysius and Josephus, in turn, follow the standard rhetorical pattern for such encomiums as described later and more fully in a handbook by Menander of Laodicea (3d century). Inasmuch as this handbook prescribes the same order of topics in both encomiums and invectives, Josephus is apparently following the order of topics which his opponent Apion, who was a grammarian, presumably adopted.

One of the charges of the anti-Semites was that the Jews had come late to civilized life. Josephus, like other Oriental intellectuals and like the Greco-Jewish historian Demetrius in the 3d century B.C.E., challenges this hypothesis by modifying biblical chronology so as to make the Jews contemporary with personalities and events of Greek history. It has been debated whether Josephus actually found the selections which he cites from numerous Greek authors or whether he invented them. However, we must assume that the citations are authentic unless proven otherwise, not only because it would have been difficult, with Josephus' admittedly limited knowledge of Greek, to forge passages in various styles, but also because he himself was under constant attack from his numerous enemies and therefore had to take precautions to avoid the damning charge of falsifying his sources.

C. Josephus on Jewish Law

Inasmuch as Josephus' works were issued more than a century before the codification of the Mishnah by Rabbi Judah the Prince, they, together with the works of his older contemporary Philo, are a most important source for our knowledge of the state of Jewish law in the 1st century. Moreover, since Josephus was born in Jerusalem and, according to his own report, had such an excellent education in Halakah (Jewish law) that by the age of 14 he was constantly consulted about the laws by the chief priests and the leaders of Jerusalem (see above), he is a much more valuable source than Philo, who lived in Alexandria, who (so far as we can tell) possessed a minimal knowledge of Hebrew, and who apparently never studied with the great sages of his era, such as Shemaiah, Abtalyon, Hillel, and Shammai. Josephus' knowledge of Jewish law was apparently acknowledged by the other Pharisees, since they comment that if the Galileans' devotion to him was due to his expert knowledge of Pharisaic laws they, too, were learned (*Life* 39 §198). Likewise, Josephus boasts (*Ant* 20.12.1 §263) that his fellow Jews admit that he far excelled them in Jewish learning, the most important component of which was clearly law. Finally, the fact that he indicates his intention to write a work on the laws (*Ant* 20.12.1 §268) in which he proposes also to explain the reasons for the laws (*Ant* 1. Proem 4 §25) further indicates how well versed in law he considered himself to be. The very fact that he included a long summary of the laws in Books 3 and 4 of *Ant*, which is a historical work (whereas other historians, such as Dion. Hal. and Livy did not) is an indication that he was directing his survey to non-Jewish readers for apologetic purposes (since, as he self-consciously says [*Ant* 4.8.4 §196], the survey is consonant with Moses' reputation for virtue). We may also suggest that his summary might have proved useful to Jewish missionaries. Indeed, if we are to take Josephus at all seriously when he promises neither to add to nor to subtract from Scripture, which certainly includes Jewish law, his presentation should be of great value.

There are many instances in *Ant* where Josephus agrees with the system of Jewish law as we have it codified in later rabbinic writings. A few of the many examples are: (1) he agrees with *m. Para* 5.3 that a lamb to be offered for sacrifice should be one year old (3.9.1 §226); (2) he agrees with *m. Sanh.* that blasphemers are not merely to be stoned (Lev 24:14–16) but also to be hanged (4.8.6 §202); (3) he agrees with *Ber.* 27b that there are two required daily prayers (4.8.13 §212); (4) he declares (with *Sipre* 109b) that women's testimony is unacceptable (4.8.15 §219); (5) he concurs with *Sanh.* 2a, 20b that a king must consult the Sanhedrin of 71 before entering upon a voluntary war (4.8.17 §224); (6) like *Mak.* 22a he states that the number of lashes to be inflicted upon a lawbreaker is not 40 but 39 (4.8.21 §238); (7) like *Git.* 90a he believes that divorce is permissible for any reason whatsoever (4.8.23 §253); and (8) he states (4.8.27 §271) that one must pay double not only for the theft of animals but also for the theft of money (*B. Qam.* 64b). Concerning lost property, Josephus differentiates on the basis of whether the object is found in a private or public place (4.8.29 §274) and indicates that one must proclaim publicly where the object has been found (cf. *m. B. Meṣ.* 2.1). Also, one should not be punished if the person he injured lives for several days before dying (*Ant* 4.8.33 §277; cf. *t. B. Qam.* 9.5–6). Josephus opposes costly shrouds (*AgAp* 2.26 §205; cf. *Moʿed Qat.* 27b; *Ketub.* 8b), and he even agrees with the oral tradition (*t. B. Meṣ.* 2.29) in placing the law concerning pointing out the road to a lost traveler immediately after the law concerning lost objects (*Ant* 4.8.29, 31 §274, 276).

There are, however, a number of places where Josephus disagrees with the rabbis; and this raises the question whether Josephus reflects an earlier stage of the oral law. Such an hypothesis would apparently be supported by the fact that Philo (*Spec Leg* I–IV), CD, and especially 11QTemple likewise record laws, including much oral law, in a systematic way. Indeed, the newly discovered manuscript of the Talmud (*ʿAbod. Zar.* 8b) states that Rabbi Judah ben-Baba, a younger contemporary of Josephus, records laws of fines. Again, the fact that Josephus breaks

down each biblical law into more precisely defined cases would seem to reflect a written legal code.

There are a number of possible explanations for Josephus' deviations from the rabbinic formulation of the oral law. In the first place, since Josephus wrote *Ant* in Rome many years after his departure from Jerusalem and had little or no contact with Talmudic rabbis there, he may have forgotten what he had learned; but this seems unlikely because memories were so carefully cultivated in those days and because Josephus had so many enemies that he had to be careful not to give occasion for a charge of heresy. Apologetic reasons seem to lie behind many of Josephus' revisions of Jewish law, just as they lie behind his recasting of the biblical narratives. Thus, whereas the Bible (Lev 19:14; Deut 27:18) declares that one must not put a stumbling block in front of the blind, Josephus extends this by declaring that one must point out the road to those who are ignorant of it (*Ant* 4.8.31 §276). Here Josephus would seem to be responding to the charge of those anti-Semites, such as Juvenal (*Satires* 14.103), who had accused the Jews of failing to point out the road to non-Jews. Similarly, by adding the detail that those who dig wells must cover them not to prevent others from drawing water but rather to protect passersby from falling into them (*Ant* 4.8.37 §283), he is answering the charge of those—such as Juvenal (14.104)—who had declared that Jews direct "none but the circumcised to the desired fountain."

Apologetic motives likewise seem to lie behind Josephus' nonbiblical and non-Talmudic equation of abortion with infanticide (*AgAp* 2.24 §202), since otherwise the law applicable to Jews would appear to be more lenient than the Noachian law applicable to gentiles, which (*Sanh.* 57b), through an interpretation of Gen 9:6, forbids killing a fetus in utero. In particular, Josephus must have felt uneasy that Jewish law on this subject was more lenient than that of Plato (*Ap.;* Plutarch, *De Placitis Philosophorum* 5.15), who states that a fetus is a living being (the rabbis [*Sanh.* 72b] declared that an abortion is permissible if the fetus is endangering the life of the mother).

Likewise, Josephus may have had an apologetic motive both in stating that the law with regard to the rebellious child applied to daughters no less than to sons (*Ant* 4.8.24 §263; the rabbis [*m. Sanh.* 8:1] restrict the law to sons alone) and in declaring that the mere intention of doing wrong to one's parents is subject to immediate punishment by death (*AgAp* 2.30 §217). Here his motive may have been to show that the Jews were no more permissive toward children than were the Romans, who were noted for their strictness. Josephus' statement (*AgAp* 2.27 §207) that it is a capital crime for a judge to accept bribes (there is no such law in the Talmud) similarly was occasioned apparently by the fact that it might appear that Jewish law was less severe than both Noachide law, which required the death penalty, and Roman law (*Lex Cornelia testimentaria,* 81 B.C.E.), which inflicted the penalty of exile upon such a judge.

Again, especially in light of the very successful Jewish missionary movement, Josephus' omission of the prohibition of converting Ammonites and Moabites to Judaism until the tenth generation (Deut 23:4) and Edomites and Egyptians until the third generation (Deut 23:7–8) may be explained by Josephus' eagerness to answer the anti-Semitic charge that the Jews were exclusivistic and misanthropic. If, indeed, Josephus also omits the child sacrifice to Moloch (Lev 18:21)—whereas one would expect him to mention this in order to contrast it with the Jewish opposition to human sacrifice—this may be due to the fact that it was no longer being practiced. Likewise, if Josephus does not omit the seemingly embarrassing law that one may charge interest from a non-Jew but not from a Jew (Deut 23:21; cf. *Ant* 4.8.25 §266), which would appear to play into the hands of anti-Semites, the reason may be that he was eager to attract non-Jews to Judaism; and interest-free loans may well have proved a major attraction.

Another possible explanation for Josephus' deviations is that he had sectarian leanings. Indeed, Yadin has noted that there are parallels between Josephus' classification of the laws and that of the author of 11QTemple and recalls that Josephus himself stated that he had spent several years with the Essenes and with a hermit named Bannus (*Life* 2 §9–12). Indeed, there are even parallels in detail: e.g., both 11QTemple (63.5) and Josephus (*Ant* 4.8.16 §222) declare that the public officers of the nearest town are to wash their hands in holy water over the head of a heifer in expiation for an undetected murderer, whereas the Bible (Deut 21:6) does not specify the head. Again, whereas the Bible (1 Kgs 21:13) says that there were two false witnesses against Naboth, Josephus (*Ant* 8.8.8 §358) mentions three, apparently in accord with CD (9.17, 22), which likewise requires three witnesses in capital cases.

Still another explanation for Josephus' version of Jewish law is that he may be following Philo. Indeed, there are no fewer than four instances where Josephus' interpretation of law agrees with that of Philo in the latter's *Hypothetica* (even though so little of this work has survived): (1) the public reading of the Torah on the Sabbath (*AgAp* 2.17 §175), (2) the death penalty for abortion (*AgAp* 2.24 §202), (3) the prohibition of concealing anything from friends (*AgAp* 2.27 §207), and (4) the prohibition of killing animals that have taken refuge in one's home (*AgAp* 2.29 §213). While it is true that these are also paralleled in rabbinic sources, the rabbinic parallels are not quite so precise as those in Philo. In particular we may cite the striking parallel in language between Philo (*Hypothetica* 7.9) and Josephus (*AgAp* 2.29 §213) in the statement of the law concerning the animal that has taken refuge in one's home as a suppliant.

As we have suggested above, Josephus may likewise have been influenced by Roman law in an effort to smooth his way with his Roman audience, though admittedly he nowhere indicates that he had studied or admired Roman law and, indeed, insists on the unique excellence of Jewish law (*Ant* 1. Proem 4 §22–23; *AgAp* 2.16 §163). We may, however, note that Josephus' statement that a thief, if unable to pay the penalty imposed upon him, is to become the slave of the aggrieved party (*Ant* 4.8.27 §272) is paralleled neither in the Bible nor in the Talmud, but rather in Roman law.

Another explanation of Josephus' deviations may be that he confuses commands with advice. Thus his statement, which is without parallel, that the law commands *(keleuei)* that in seeking a spouse one should not be influenced by a dowry (*AgAp* 2.24 §200) may be mere advice, since the verb *keleuei* (like the Latin *iubeo* to which it corresponds) may mean "recommends" or "advises," as indeed it seems

to mean in *Life* 75 §414. The Talmud (*Qidd.* 70a) has similar advice, that one should not choose a wife for the sake of her money.

We may be surprised that Josephus is occasionally less liberal than the rabbis, notably in his attitude toward artistic representation. Thus he is ready to lead the Jews of Galilee to destroy the palace of Herod the Tetrarch because it had been decorated with images of animals (*Life* 12 §65); and he condemns King Solomon for placing the images of bulls and lions in the temple (*Ant* 8.7.5 §195), whereas even the Bible itself (1 Kgs 7:25; 10:20) contains no such rebuke and the rabbis actually state that all faces are permissible except that of a human (*ʿAbod. Zar.* 43b). The explanation here may be that the rabbis were realistic enough to perceive that the masses of the people were liberal in their interpretation of the laws concerning art work, as indicated by the artistic representation that has come down to us; hence they made no attempt to stop them. Josephus, on the other hand, had no "constituency" and hence felt that he could afford to maintain an unyielding posture; indeed, he may have felt a necessity to do so while among the Galileans, who were known for their religious zealotry.

D. Language and Style of Josephus

With the completion of K. H. Rengstorf's (1973–83) concordance of Josephus (except for the small portion of *AgAp* [2.5–9 §51–113] which is extant only in Latin), we are now in a position to examine Josephus' language against the backdrop of that of his predecessors and contemporaries. This concordance, we may remark, lists every occurrence of every word (with the exception of a very few common words), has a very high degree of accuracy, is very generous in quoting lemmas, lists noteworthy textual variants, and often cites the Latin translation of Josephus. Unfortunately, unlike the truncated dictionary of Josephus by Thackeray and Marcus (1930–55), it usually does not give the meaning of the word in a given passage but merely lists all the meanings at the beginning of the entry. Moreover, it omits the context for prepositions, conjunctions, pronouns, numbers, and particles, though it is precisely such words that are often the key to the appreciation of the author's style; and it is not sufficiently analytical with regard to Josephus' grammar.

Ladouceur (1977) has demonstrated that in declensional and conjugational forms, Josephus, far from being dependent upon any single author, such as Dionysius of Halicarnassus, fluctuates freely between classical and post-classical usage; and much of his grammatical usage is paralleled in Polybius and in Attic inscriptions of the first century B.C.E.

As to Josephus' employment of assistants, it is ironic that no one has been able to pinpoint the influence of assistants in *JW*, Josephus' earliest work, in which he himself says he received such help (*AgAp* 1.9 §50); but while Josephus says nothing of obtaining such assistance for *Ant*, Thackeray (1929: 115) claims to have found signs of it in *Ant* 15 and 16 (an assistant well versed in Sophocles) and 17–19 (an assistant steeped in Thucydides). Moreover, there is no indication of the work of assistants in *AgAp*, Josephus' final and most polished work. In addition, the influence of Sophocles and of Thucydides was so pervasive in other Greek writers of this period, notably Dionysius of Halicarnassus, that it is at least as likely that Josephus' language was influenced directly by those writers as indirectly through the alleged assistants. The fact that Josephus used Strabo as a major source in *Ant* 13–15 shows that there is no sharp dividing line at the beginning of Book 15, as Thackeray claims. In addition, we may note that Nicolaus of Damascus, who was Josephus' main source for *Ant* 14–17, was steeped in Sophocles and thus may have been a source of the Sophoclean element in Josephus. Inasmuch as Josephus wrote *Ant* after spending over 20 years in Rome in a Greek-speaking environment, we may suppose that during this interval he perfected his knowledge of Greek to the point where assistants were not needed; in any case if he needed assistants for *Ant*, he should have required them also for the *Life* and *AgAp*, which were written immediately thereafter. As to the occurrence of poetic words and Ionic prose forms in Josephus, they may simply represent a non-Attic dialectical contribution to the *koine*, as seen in the papyri, and should not be used as unambiguous evidence of the literary influence.

In his narrative style Josephus appears to have followed the pattern of his Greek predecessors. Thus his use of double narrative—i.e., two stories on the same theme (e.g., *Ant* 18.3.4 §66–80; and 18.3.5 §81–84)—is in accord with the literary technique of the tragic school of Hellenistic historians. Again, in his suicide narratives, he follows the pattern found in many Greek and Roman writers; and this, we may suggest, would tend to impugn the historical value of such accounts.

Book 7 of *JW* presents a special problem. On the basis of a study of crasis and elision, Morton and Michaelson (1973) have concluded that there is a marked difference between Book 7 and the other books of *JW*, though, of course, this may indicate only that Book 7 did not benefit from the careful editing that the other books received. Moreover, there are sharply different rates of elision for the various parts of *AgAp*, whereas no one has seriously doubted the unity of that work. In the most recent study of Book 7, Schwartz (1985) concludes, on the basis of content rather than of style, that the book consists of three strands, the first composed in 79–81 C.E. (the date usually assigned to the whole work), the second in 82–83 C.E., and the third early in Trajan's reign (ca. 100 C.E.). One other interesting result of the work of Morton and Michaelson is that *Life* and *JW* have a definite stylistic relationship and presumably a common source; this would appear to suggest an answer to a persistent question in Josephan scholarship, namely, whether the *Life* is largely based upon a work which was utilized by Josephus for *JW* many years earlier.

As we have noted, we do not have a single fragment of any Aramaic version of *JW;* and there is no evidence that the Slavonic version is dependent on it. Indeed, despite Josephus' statement (*JW* 1. Proem 1 §3) that he originally composed the work for the benefit of the Jews of the "upper country" (presumably in Aramaic, the language of the Babylonian Jews), doubt has been expressed that he composed such a version at all. But Josephus seems to have been fully at home in Aramaic, since he apparently used a source in that language (presumably in the Babylonian

dialect) for his extended account of Asinaeus and Anilaeus (Schalit 1965).

Despite his long residence in Rome, there is no conclusive evidence that Josephus knew Latin. Indeed, since such a large percentage of the intellectuals there were fully conversant in Greek, he probably saw no need to learn Latin. The only Roman writer he mentions by name is Livy (*Ant* 14.4.3 §68). Mommsen (1870) suggested that Josephus' source for the lengthy account of the assassination of Caligula and the accession of Claudius was a Latin history by Cluvius Rufus, since Cluvius (according to an emendation, *Ant* 19.1.13 §91–92) is said to have given an apt quotation from Homer, an anecdote which would seem to be derived from Cluvius himself. It has also been noted that Josephus' style in Book 19 is more metaphoric and more highly colored than is usual for him. But aside from the fact that there is no indication that Cluvius' history (which is now lost) covered the period of Caligula and Claudius, the rhetorical style may have come from another writer within the same rhetorical tradition; and the fact that Josephus' account places such stress on the role of Agrippa I in these events would seem to indicate the likelihood that his source (or one of his major sources) was an oral tradition from the family of Agrippa, with which Josephus was very close.

E. Josephus' Influence

Josephus seems to have been ignored by classical writers; indeed, the only pagan writer who definitely knows the works of Josephus is the 3d-century Porphyry, who (*De Abstinentia ab Esu Animalium* 4.11) refers (*Abst.* 4.11) to Josephus' discussion of the Essenes in *JW, Ant,* and *AgAp* (there is no allusion to them in our text of *AgAp,* however).

Josephus' influence becomes most noticeable in the Church Fathers. In particular we may cite his influence upon the Greek Hegesippus, Hippolytus, Origen, Theophilus, Eusebius, John Chrysostom, and Pseudo-Kaisarios, as well as upon the Latin Minucius Felix, Tertullian, Jerome, and Augustine. Indeed, for writers such as Origen, Eusebius, and Jerome, Josephus was the most useful source for confirming the Bible. Jerome (*Epistula ad Eustochium* 22.35 = *Patrologia Latina* 22.421) praises Josephus as a second Livy; and, in fact, so marked was his favor for Josephus that during his lifetime it was thought that he had translated *JW* into Latin. Indeed, the Church Fathers found in *JW* a strong affinity with NT themes, especially the significance of the destruction of the temple and its connection with the passion of Jesus.

During the Middle Ages Josephus was regarded as an authority in such diverse fields as biblical exegesis, allegory, chronology, arithmetic, astronomy, natural history, geography, military tactics, grammar, etymology, and theology. For Christians who were cut off from the direct Jewish tradition, it was Josephus who supplied pilgrims with their knowledge of the Holy Land. In catalogues of medieval libraries his works commonly appear with the Church Fathers. In the monastery of Cluny, Josephus is listed as one of the authors whose works were read during Lent. His influence was even greater then than it has been in modern times because he was said to have written certain works which are generally regarded as spurious, notably *4 Maccabees* and *Hegesippus,* as well as, of course, the paragraphs about Jesus in *Ant.* We may note, in particular, the influence of Josephus upon such medieval Latin authors as Bede, Rabanus Maurus, Fulcher of Chartres, and, above all, Peter Comestor, whose *Historia Scholastica,* written in the 12th century, soon became the most popular book in Europe. An indication of Josephus' influence upon this work is the fact that Comestor is often a clue to restoring the original text of the Latin translation of Josephus, and vice versa. Josephus' influence may also be seen in the popularity of the legend of Josephus the physician who cured Titus of a swollen leg (cited in Landolfus Sagax's *Historia miscella* [ca. 1000] and in the 13th-century *Sachsenspiegel*).

Among Byzantine Greek authors whom Josephus influenced we may cite George Hamartolos, Malalas, Zonaras, the anonymous author of *De obsidione toleranda,* Nikephoros Kallistos Xanthopoulos, and the anonymous author of *Palaea Historica.* Josephus was unknown among Jewish writers during the Middle Ages; but the influence of Josippon (see below) was profound on such Jewish commentators as Rashi in the 11th century and the Franco-German Tosafists in the two centuries thereafter.

During the Renaissance the enormous popularity of Josephus may be gauged from the fact that between 1450 and 1700 there were more editions of *Ant* (73) and of *JW* (68) than of any other historical work in Greek. The 14th-century Nicolas of Lyre was greatly indebted to Josephus in his biblical commentary. During this period, as in the Middle Ages, Josephus was ignored by Jewish writers, with the notable exception of Abrabanel in the 15th century and Azariah dei Rossi in the 16th century. As to the popularity of Josippon, it has even been suggested that this paraphrase was a link in the chain of events which culminated in the readmission of the Jews to England by Cromwell.

The influence of Josephus upon modern literature has been profound but has been documented fully only for Spanish literature (in an unpublished study). Until our own days a common sight in many homes was a copy of Josephus alongside the Christian Bible since his works bridged the chronological gap between the OT and NT. Among strict English Protestants only Josephus and the Bible were permitted to be read on Sunday. The growing sanctity of the Hebrew Scriptures in England by the end of the 16th century led playwrights to turn to the Apocrypha and Josephus for source material, in particular for plays about Herod. In the period before the American Revolution, the earliest book by a Jewish author (other than the Bible) printed in America was L'Estrange's 1719 translation of *JW.* The second book of Jewish authorship printed in America was Morvvyne's 1722 translation of Josippon.

In French literature we may note Josephus' influence on Corneille, Racine, and Voltaire. In Italian he was particularly influential on Petrarch. In Spanish literature he especially influenced such writers as Alfonso the Learned, Lope de Vega, and Tirso de Molina. Josephus' popularity was particularly great among Spanish Conversos (the so-called Marranos), who practiced their Judaism secretly after their conversion to Christianity in the 14th and 15th centuries and who found in Josephus an author who was both accepted by the Church (because of the *Testimonium*

Flavianum) and proud of his Jewish heritage and faith. In German literature his influence is particularly to be seen in the 20th-century Lion Feuchtwanger's very popular, and largely autobiographical, trilogy about him (1932, 1936, 1942).

F. The Text of Josephus

So far as we can tell, all the writings of Josephus have been preserved, thanks to the interest of the Christian Church. There are 133 manuscripts of some or all of his works; but the earliest of these dates from the 11th century; and the text, especially of *Ant,* is often in doubt. Only one papyrus fragment of his works has been found (of *JW* 2.20.6–7 §576–79; and 2.20.7–8 §582–84), but it consists of only 38 complete words and 74 words in part. The fact, however, that there are no fewer than nine places (several of them, to be sure, based on somewhat shaky conjectures deriving from the number of letters in a line) where the fragment differs from known manuscripts leads one to think that the text of *JW,* which is in much better shape than that of *Ant,* is even less secure than has been supposed. The fact that the papyrus agrees now with one group of our extant manuscripts and now with another leads one to suggest that a century ago the editor of the definitive text of Josephus, Benedictus Niese, relied excessively on one family of manuscripts. Hence, for example, in the famous episode at Masada (in *JW* 7), we should now have less confidence in the reliability of the text. Another clue to the unreliability of the text that we possess may be found in the fact that the Church Fathers of the 3d and 4th centuries (Origen, Eusebius, and Jerome) declare that, according to Josephus, Jerusalem was destroyed because of the murder of James the Just, a statement nowhere to be found in our present text of Josephus. While such statements may represent tendentious writing, they may also reflect a text different from ours. Similarly, as Shlomo Pines has noted, there are statements in the 10th-century Arabic historian Agapius allegedly drawn from Josephus which are not in our texts (1971: 49–63).

The best modern edition of the Gk text remains the *editio maior* of Niese (7 vols., 1885–95), which has a much more conservative and full apparatus criticus than his *editio minor* (6 vols., 1888–95). Of the complete or partial Gk mss mentioned by Schreckenberg (1972), 50 were unknown to Niese, though only 2 of these are apparently of any major significance. Naber's edition (1888–96), which appeared almost simultaneously with that of Niese, has a smoother and more readable text than that of Niese but is too free with emendations and has numerous errors in the apparatus criticus.

G. Paraphrases and Translations

There are two translations into Latin, the first a free paraphrase of *JW* dating from the 4th century and ascribed to a certain Hegesippus, and the second a more literal translation of the works (with the exception of *Life*) made under the direction of Cassiodorus in the 6th century. Inasmuch as our earliest Greek mss date from the 11th century, these Latin versions, especially that ascribed to Cassiodorus, are of considerable value for the reconstruction of the text; they have not been fully exploited hitherto for this purpose, partly because we have critical editions solely for *AgAp* and the first five books of *Ant* (the latter, moreover, is based on only a few of the 171 manuscripts, its stemma is less than careful, and manuscripts are cited irregularly and inconsistently).

We have a Syriac version of Book 6 of *JW.* Its editor, Heimann Kottek (1886), has conjectured that the translator had before him a portion of the Aramaic original; but inasmuch as that original is completely lost, it is difficult to substantiate this claim.

A Hebrew paraphrase of *JW* was apparently prepared in S Italy in the 10th century (though Zeitlin [1962–63] has dated it as early as the 3d or 4th century). Its author is known as Josippon, and this paraphrase has come down to us in three very different recensions; the work has now, for the first time, been scientifically edited by D. Flusser. See JOSIPPON. Josippon's chief source was, it seems, Hegesippus, though he also shows knowledge of the Apocrypha and of the Latin translation of the first 16 books of *Ant.* In terms of purpose, whereas Josephus views the war between the Jews and the Romans as one for national liberty, Josippon looks upon it as a holy war. He thus emphasizes two opposite trends—submission to the Romans and willingness to suffer martyrdom. The sole translation of this work into English is that of Peter Morvvyne in 1558, but it was based upon an abbreviated Latin version. A translation of the full text from the original Hebrew is now being prepared by Steven Bowman of the University of Cincinnati.

Another paraphrase, dating from the 11th century, was made into Old Russian, the definitive edition of which has been issued by Meščerskij (1958). Eisler (1929–30) suggested that this version is at least partially based on Josephus' original Aramaic version of *JW,* but this is problematic since its grammatical constructions only occasionally deviate from the Greek text. There are translations of this version into French and German, but not into English. It has been suggested, though hardly conclusively, that this version was used in the ideological struggle against the Khazars, who had been converted to Judaism in the 8th century.

What is of particular interest in the Slavonic text is the additions pertaining to John the Baptist and Jesus, though, curiously, neither of them is mentioned by name. It seems hardly likely that a Jew (i.e., Josephus) could have written "according to the law of *their* fathers" or "they [i.e., the Jews] crucified him," as we find in the Slavonic text. (An English translation of the passages pertaining to John and Jesus is to be found at the end of the 3d volume of the Loeb Library translation of Josephus.)

For many years the standard translation of Josephus' works into English was that of William Whiston in 1737, which has been reprinted at least 217 times. The translation has undoubted virility, but is based on Haverkamp's inferior 1726 text, is full of outright errors, and in its notes has such strange notions as that Josephus was an Ebionite Christian and a bishop of Jerusalem.

The Loeb Classical Library edition, by Henry St. J. Thackeray et al. (originally in nine volumes, now reprinted in ten volumes [London, 1926–65]) contains an eclectic Greek text which is dependent on Niese and Naber, with relatively few original emendations. The translation is often rather free, the commentary (frequently indebted to

Reinach's French edition) is increasingly full, and there are a number of useful appendixes, especially bibliographical, in the last four volumes. Geoffrey A. Williamson's 1959 translation of *JW* (revised by E. Mary Smallwood in 1981) is popular and readable, having removed passages which appear to interrupt the narrative. Gaalya Cornfeld's 1982 translation of *JW* is often closely related to Thackeray's Loeb version; it has an extensive commentary and lavish illustrations but contains many errors.

H. Scholarship on Josephus

There is no classical or Jewish author for whom we have more complete or more fully annotated bibliographies than Josephus. Schreckenberg (1968), covering the period from the appearance of the editio princeps of the Latin translation in 1470 to 1965, lists 2207 entries; but the arrangement is year by year instead of by subject matter; there are numerous omissions; summaries are missing from a large number of items; and there are many errors, as is inevitable in this kind of work. His supplement (1979), arranged alphabetically by author, in which he attempts to be complete through 1975, has 1453 entries. Feldman (1986) has approximately 2600 entries, arranged alphabetically by author, of which about 900 cover the period from 1976 through 1984, while approximately 1900 are items that Schreckenberg missed, and the remainder contain summaries where Schreckenberg lacked them. This work also supplies indexes of citations and of Gk words in Josephus, both of which are missing from Schreckenberg's second volume. It also lists nearly 300 corrigenda for Schreckenberg's first volume and about 200 for his second volume.

Feldman (1984) also lists 5543 entries, arranging the subject matter according to 29 major topics and 428 subtopics and presenting not only summaries but, in most cases, criticisms, often at length, of the various items and, for all major problems, an evaluation of the state of the question. He also gives a list of desideratums in the field and the reasons why such works are needed. (Corrigenda to this volume will be found in Feldman 1986.) The most recent critical bibliographies of Josephus are those by Bilde (1988) and Feldman (in Feldman and Hata 1989: 330–448).

As to works about Josephus, Hölscher (PW 9: 1934–2000) has written the most influential general survey, in which he deals especially with Josephus' sources. His theory that for *Ant* Josephus made uncritical use of an intermediate lost Hellenistic midrash is based on the hypothesis, popular with scholars of his era, that ancient authors would have found it most difficult to consult more than one source at a time; this is largely contested today.

The most original and most challenging work on Josephus remains that by Laqueur (1920), who concludes that Josephus' works reflect the circumstances of the time when he wrote, a point that has now been further developed by Schwartz (1985). The fairest and most comprehensive overall survey remains the semipopular series of lectures delivered by Henry St. J. Thackeray (1929). His most original theory, developed at some length in the work, that Josephus employed an assistant who was well versed in Sophocles for Books 15 and 16 of *Ant* and another assistant who was well acquainted with Thucydides for Books 17 through 19, has been challenged, since Sophoclean and Thucydidean words appear throughout Josephus' works (see above). Moreover, in his chapter on the *Testimonium Flavianum*, Thackeray was unduly influenced by the irrepressible Eisler (1929–30).

Shutt (1961) is concerned primarily with the relationship between Josephus' language and style and those of Nicolaus of Damascus, Dionysius of Halicarnassus, Polybius, and Strabo. His conclusions are hardly convincing, however, since many of the words cited are hardly unique with those authors.

Cohen (1979) has written the most challenging and most influential book since Laqueur (1920), to whom he is much indebted. Cohen suggests that Josephus used a preliminary draft for both *JW* and *Life* but that he modified it less in *Life;* however, such a theory is hard to substantiate, since we do not have a single fragment of the memoir; and we may well ask why Josephus did not use such a document for all the material common to *JW* and *Life*. Moreover, Cohen is hypercritical of Josephus' credibility except when it fits into his own theory that Josephus indeed originally backed the revolt against the Romans as he admits. Cohen argues that after Josephus surrendered, he invented a moderate faction to make it appear that he had not been alone in his defection.

Rajak (1983) in a useful, if less challenging, corrective to Cohen, interprets Josephus' social, educational, and linguistic background in the light of what can be known of his contemporaries and their attitudes. The book focuses on the Jewish revolt against the Romans, which the author interprets in the comparative light of other revolutions. Two collections of essays by various scholars have also appeared (Feldman and Hata 1987, 1989).

LOUIS H. FELDMAN

JOSES (PERSON) [Gk *Iōsēs*]. Greek equivalent of the Hebrew Joseph (Mark 6:3 = Matt 13:55; Mark 15:40 = Matt 27:56).

1. Brother of Jesus (Mark 6:3). The meaning of the word *brother* is uncertain. It is simplest to understand Jesus' brothers as the sons of Joseph and Mary born after Jesus. In general the early Church Fathers understood them to be the children of Joseph by a previous marriage. Beginning with Jerome, many have held that they were Jesus' cousins, the children of Mary's sister. See JESUS, BROTHERS AND SISTERS OF.

2. Son of one of the women named Mary who witnessed Jesus' crucifixion (Mark 15:40) and burial (Mark 15:47). Some argue that this Mary was the sister of Jesus' mother (John 19:25); and thus Joses was Jesus' cousin, to be identified with the Joses in #1 above. Both Joseses listed above probably needed no further identification because they were well-known to the first readers of the gospel. In Acts 4:36 some manuscripts read Joses for Joseph, the given name of Barnabas, Paul's companion.

GARETH LEE COCKERILL

JOSHAH (PERSON) [Heb *yôshâ*]. A descendant of Simeon (1 Chr 4:34), described as one of the "princes in their families" (1 Chr 4:38). The name may mean "Yahweh is a gift." In the LXX the name appears as *Ios[e]ia*. (Lucian reads *Ioas;* the Vg *Iosa*.) See Williamson *Chronicles* NCBC, 62.

CRAIG A. EVANS

JOSHAPHAT (PERSON) [Heb *yôšāpāṭ*]. **1.** A Mithnite, one of David's warriors, a member of "the Thirty" (1 Chr 11:43). The addition in Chronicles (1 Chr 11:41b–47) to the list in 2 Sam 23:8–39 (= 1 Chr 11:8–41a) contains several references to cities or regions in Transjordan (Reuben, Ashteroth, Aroer, Moab), and it is possible that "Mithnite" (LXX^{B,S} "Bethanite"), the descriptive adjective applied to Joshaphat, refers to an otherwise unknown locality in that region (along with other terms in the list: Mahavite, Mezobaite; see Williamson *Chronicles* NCBC, 103–4). The total number of names in the list exceeds 30; by reading *šālîšîm*, "officers" instead of *šĕlōšîm*, "thirty" this list would name members of David's officer corps rather than a distinctive military unit called "the Thirty." The Chronicler has doubled the list of warriors who supported David (1 Chr 11:41b–12:40) beyond that contained in the parallel narrative (2 Sam 23:8–39 = 1 Chr 11:10–41a); the source for these additional lists can only be a matter of conjecture. The long list reflects his concern to show "all Israel" united in support for David, a characteristic theme of the Chronicler's history.

2. One of the priests appointed by David to blow trumpets during the transfer of the ark from the house of Obed-edom to Jerusalem (1 Chr 15:24).

RAYMOND B. DILLARD

JOSHAVIAH (PERSON) [Heb *yôšawyāh*]. A son of Elnaam and brother of Jeribai (1 Chr 11:46), one of the mighty men of David's armies (1 Chr 11:46). These names appear in a list occasionally described as the "additional" mighty men—16 in number (1 Chr 11:41b–47)—since they are not included in the parallel list in 2 Sam 23:24–39 (= 1 Chr 11:26–41a). The origin of this additional list has been disputed: some consider it a postexilic fabrication, yet the E Jordanian locale suggested by the names (e.g., all the known sites are E of the Jordan: Reuben, v 42; Ashteroth . . . Aroer, v 44; Moab, v 46) appears to be an unlikely invention, considering the suspicion regarding this area after the Exile. That David would have support from Moab is not surprising, considering (1) his Moabite ancestry (Ruth 4:18–22) and (2) the sequestering of his parents there (1 Sam 22:3–4). This list probably was an additional fragment available to the Chronicler (Williamson *1 and 2 Chronicles* NCBC, 104), so we suggest that Joshaviah was a Transjordanian war hero who joined David's forces. See also DAVID'S CHAMPIONS.

JOHN C. ENDRES

JOSHBEKASHAH (PERSON) [Heb *yošbĕqāšâ*]. One of the 14 sons of Heman who were appointed to prophesy with musical instruments under the direction of their father and the king (1 Chr 25:4). Joshbekashah received the 17th lot cast to determine duties (1 Chr 25:24). Scholars have long suggested that the final nine names in 1 Chr 25:4 can be read as a liturgical prayer. For instance, Joshbekashah could be understood as a participial form of the verb *yšb* followed by the word *qāšâ*, a feminine adjective which is used elsewhere as a noun (Ps 60:5—Eng 60:3). The resulting translation would be "sitting (in) adversity," and the phrase would form part of the fourth line of the

liturgical prayer reconstructed by scholars. For a reconstruction and translation of the prayer, a summary of interpretative possibilities, and bibliography, see ELIATHAH.

J. CLINTON MCCANN, JR.

JOSHEB-BASSHEBETH (PERSON) [Heb *yōšeb baššebet*]. Found only at 2 Sam 23:8, the name belongs to one of David's mighty men. See DAVID'S CHAMPIONS. The name is unusual in form in the Hebrew onomasticon; the name Jashobeam at the corresponding point in 1 Chr 11:11 has led to explanation of Josheb-basshebeth as a corruption of an original **yišbaʿal* (so *IPN,* 247). The name was perhaps first altered by dysphemic pronunciation of the theophoric element as *bōšet* (see also ISH-BOSHETH).

PHILIP C. SCHMITZ

JOSHIBIAH (PERSON) [Heb *yôšibyāh*]. Son of Seriah, a descendant of Simeon (1 Chr 4:35), described as one of the "princes in their families" (1 Chr 4:38). The name probably means "Yahweh causes to dwell." In the LXX the name appears as *Isabia.* See Williamson *Chronicles* NCBC, 62.

CRAIG A. EVANS

JOSHUA (PERSON) [Heb *yĕhôšūaʿ*]. Var. JESHUA. Five persons in the Bible bear this name. Outside the biblical corpus, Joshua ben Hananiah was an important early rabbinic sage (#6 below).

1. The man who served as Moses' "servant"/"minister" (Heb *mĕšārēt:* Exod 24:13; Josh 1:1) during the wilderness period, and subsequently led the Israelite entry into Canaan, and apportioned the land to the respective tribes. Joshua's territorial inheritance (Josh 19:49–50), his burial site (Josh 24:30), and the genealogical note in 1 Chr 7:27 all indicate that he belonged to the tribe of Ephraim. Num 13:16 reports that Moses renamed Hoshea as Joshua ("Yahweh is salvation"), apparently to explain why a person living in a generation born before the sacred Tetragrammaton was revealed (Exod 6:3) was given a "Yahweh" name.

Joshua first appeared in the Bible as a warrior who fought, at Moses' command, against the Amalekites (Exod 17:9–13). As a sort of cultic apprentice, he accompanied Moses onto Mt. Sinai (Exod 24:13; 32:15–18); and he served at the tent of meeting (Exod 33:11; cf. Acts 7:44–45). Among the 12 spies sent to reconnoiter Canaan (Numbers 13–14), only Joshua and Caleb trusted that Yahweh could lead Israel to victory in the promised land.

As Moses approached the time of his death, the Lord instructed him to designate Joshua as his successor (Num 27:12–23; Deut 3:23–28); and the book of Joshua relates how Joshua faithfully carried out the commands of Moses as he executed the double task of leading the Israelites into the promised land and putting them in possession of it (cf. Lohfink 1962). Following Israel's settlement in Canaan, Joshua led the gathered Israelites in a renewal of the covenant with Yahweh (Joshua 24).

Efforts to reconstruct the history of the traditions underlying the Joshua stories have usually concluded that most of the references to Joshua in the Pentateuch are secondary insertions (Möhlenbrink 1943; Noth *HPT,* 175–77) and therefore do not reflect historical reality. For example, a critical reading of Num 13:30–31; Deut 1:34–37; and Josh 14:6–8 suggests that there was a preliminary stage of the spy story of Numbers 13–14 in which there was only one spy—Caleb—who exhibited appropriate faith in Yahweh. See CALEB. Because tradition assigns Moses and Joshua to tribes (Levi and Ephraim) which probably had different historical origins and settlement histories (cf. Ramsey 1981: 65–68, 84–88), there is some question as to whether the two men were historically associated with each other.

According to a widely held thesis, the entire block of material from Joshua through 2 Kings in the Hebrew Bible was composed by an individual or a school, the Deuteronomistic Historian(s) (Dtr), who lived in the late 7th to mid-6th century B.C. (Noth *NDH;* cf. Cross *CMHE,* 274–89) and utilized a variety of sources, of varying historical value. Some tradition critics have concluded that the sources for Joshua 2–9 belonged to the genre of *etiological sagas* and have minimal historical value (Alt *KlSchr,* 176–92; Noth *Josua* HAT, 11–12; Fohrer 1968: 200–201). In any case it is frequently questioned whether the Ephraimite Joshua would likely have been a central figure in events leading to occupation of Benjaminite territory (Joshua 2–9). Some historians (e.g., Alt *KlSchr,* 176–92; Gottwald 1979: 153) theorize that Joshua established a reputation as a warrior in the battle of Beth-horon (Josh 10:1–15), a site on Ephraimite soil. This reputation, plus his decisive role in the Shechem assembly (Joshua 24) led to his name's being incorporated into other stories of neighboring regions. Noth (*Josua* HAT, 61, 139) acknowledged Joshua's role in the Shechem assembly but believed that the original hero of the battle of Beth-horon was a now-unknown Benjaminite hero whom Joshua displaced as the account was transmitted. Another proposal (Weinfeld 1988: 329–32) is that it was Joshua's settlement of Timnath-serah (Josh 19:50) that established his military reputation and eventually led to a magnified role. Yet another theory is that virtually the entire body of Joshua material is fiction created by Dtr and even later writers (Van Seters 1983: 322–37).

A different group of scholars has argued that etiology can be shown not to have been a controlling motive in the Conquest stories and that the testimony of archaeological evidence generally confirms the historicity of these narratives (cf. Albright 1963: 24–34). Consequently, while acknowledging that the settlement in Canaan was more complicated than the account in Joshua implies, they have credited to Joshua a historical role which is much closer to that reported in the OT (cf. *IDB* 2: 546–48; *BHI,* 129–43; de Vaux *EHI,* 593–680; Boling and Wright *Joshua* AB, 72; but see 212 and 243–44).

The sources underlying the accounts of the territorial assignments (Joshua 13–21) are dated to the period of the Monarchy by most scholars (Soggin *Joshua* OTL, 11–14; Gottwald 1979: 155–63) and therefore cannot be taken as reflecting actual events from Joshua's day. Bright (*IDB* 2: 545) and Gottwald (1979: 160), who may be taken as representatives of the conservative and the revisionist wings of critical historical scholarship, respectively, concur

that it was Dtr who introduced the motif of Joshua presiding over the allotment of the promised land.

The historical reconstructions just mentioned all rely to a considerable degree on inferences about stages of the traditions' development prior to the final form of the narrative. Another approach to the Joshua material, less interested in recovering the historical facts, examines the literary or theological characterization of Joshua in the canonical text. What understandings of Joshua are proffered by the narrative now before us (which is the one stage of the tradition of whose shape we can be certain)?

Close reading reveals that the biblical narrative portrays Joshua as more than just a successor to Moses. Numerous passages seem consciously to portray him as an antitype of Moses (cf. Wenham 1971: 145–46; Childs *IOTS*, 245). The Lord assures Joshua that the divine presence will accompany him as it did Moses (Josh 1:5; 3:7; cf. 4:14). The crossing of the Jordan, led by Joshua, is described as analogous to the crossing of the Red Sea (Josh 4:23). Joshua's encounter with the commander of the army of Yahweh (Josh 5:13–15) exhibits a striking resemblance to Moses' encounter with the angel of Yahweh at the burning bush (Exod 3:2–5). Joshua exercises the authority to reinterpret or even suspend divine commands spoken to Moses (Josh 6:17; 8:27; cf. Polzin 1980: 73–145). Joshua 12 juxtaposes a summary of Joshua's military feats (vv 7–24) to those of Moses (vv 1–6). Joshua's assignment of the inheritances for nine and one-half tribes W of the Jordan is paralleled to the similar work by Moses for the Transjordanian tribes (Josh 13:8–33 = 14:1–19:51). Joshua's function as covenant mediator in Joshua 24 resembles that of Moses at Sinai (Exodus 20–24). The note of Joshua's death (Josh 24:29) assigns to him the epithet "servant of Yahweh," which was frequently used of Moses (e.g., Josh 1:1; 8:31).

The canonical tradition, of course, does not grant Joshua status fully equal with that of Moses. A few passages explicitly assign Joshua a role inferior to that of Moses (Num 11:26–29; 27:20–21). Also, the deeds of Moses outstrip those of Joshua; and the signs and wonders performed by Moses are much more numerous (e.g., Exodus 7–11; 14:21–31; 15:22–25; 17:1–7; Num 20:2–13). Joshua functions occasionally as an intercessor for the people (cf. Josh 7:6–9), but not nearly so often as Moses (e.g., see Exod 32:11–14; Num 11:2; 12:13; 14:13–19; 21:7). In addition, Joshua's speaking for the Lord (see further below) is not nearly so extensive as is Moses' (cf. numerous passages in Deuteronomy); and the teaching and law giving of Moses are normative for both Joshua and the Israelites (e.g., Josh 1:7–8, 13; 4:10; 8:30–35; 11:12–15; 22:2; 23:6). Finally, the NT contains a scant 3 references to Joshua, in contrast to around 80 for Moses.

The portrait of Joshua contains a number of elements which elsewhere appear in connection with kings. The commissioning episode in Num 27:15–23 speaks of Joshua as one who will "go out and come in" before the people of Israel, that they may not be as "sheep which have no shepherd." This terminology refers to leadership in battle, usually associated with a royal figure (e.g., 2 Sam 5:2; 1 Kgs 22:17; 2 Kgs 11:8). The charge to Joshua in Josh 1:2–9 utilizes language associated with the installation of monarchs (cf. Deut 17:18–20; 1 Kgs 2:1–5; Porter 1970). Nelson (1981) submits that the parallels between Joshua and King Josiah (in whose time Dtr likely lived and wrote) are especially notable and that the Joshua story provided historical precedent for Josiah's revolutionary reforms. The description of faithful Josiah in 2 Kgs 22:2 is the only text besides Josh 1:7 and 23:6 to express total obedience to the law by the phrase borrowed from Deut 17:20, "turning not from it to the right hand or to the left." Both Joshua and Josiah gathered everyone to hear the Book of the Law and renew the covenant (Josh 8:30–35; 2 Kgs 23:2–3). The Passover celebration in Josh 5:10–12 may be seen as a model for Josiah's observance (2 Kgs 23:21–23).

Later Jewish traditions referred to Joshua as a prophet (Sir 46:1; *Eup.* [Eus. *Praep. Evang.* 9.30.1]; Jos. *Ant* 4.7.2; 4.8.46), and this characterization is not without foundation in the biblical narratives. It is true that certain Priestly texts imply that, unlike Moses, Joshua needed priestly mediation (Num 27:15–23; Josh 14:1; 19:51). But in the book of Joshua, the Lord often speaks directly to Joshua (e.g., Josh 1:1; 3:7; 4:1, 15; 8:18; 20:1). Joshua uses the prophetic formula, "Thus says Yahweh" (Josh 7:13; 24:2). 1 Kgs 16:34, in an allusion to Josh 6:26, reports the fulfillment of "the word of Yahweh, which he spoke by Joshua the son of Nun." As did the later prophets, Joshua exercises the intercessory function (Josh 7:6–9; cf. 2 Esdr 7:107) in a fashion similar to Moses (Exod 32:11–13; Num 14:13–19). It is not entirely impossible that the author considered Joshua to be the "prophet like Moses" referred to in Deut 18:15–19.

GEORGE W. RAMSEY

2. The reputed governor of Jerusalem during the reign of King Josiah (2 Kgs 23:8). He is linked, probably on the basis of his position as governor, with the high places of the "gates" (or, following other pointings, "satyrs" or "genii"; see Jones *Kings* NCBC, 621), which high places were destroyed at the entrance of the city. Although the exact location of the two gates referred to is unknown (Robinson *2 Kings* CBC, 220), it is probable that one standing in the city gate had the door to Joshua's home on his left (Rehm

Kings EB, 215). Yadin thinks that the reference in the verse is not to a gate in Jerusalem but to a gate in Beer-sheba which was near the governor's house. He believes that he has found the *bāmôt* (the word for "high places" may be translated as a singular item) referred to (see Shanks 1977: 4–12; contra Rainey 1977, who sees the altar as dismantled probably by Hezekiah before 701 B.C.). There is no further biblical or extrabiblical record of this Joshua (Rehm *Kings* EB, 223).

3. A son of Jehozadak, and the high priest and consequently religious leader to whom the 6th-century prophet Haggai delivered his message, along with Zerubbabel, governor of Judah (Hag 1:1; 2:2). Jehozadak was son of Seraiah (1 Chr 6:14–15), the chief priest killed by Nebuchadnezzar at Riblah after the destruction of Jerusalem (cf. 2 Kgs 25:18ff.; Jer 52:24ff.), and brother of Ezra the scribe (Ezra 7:1). Joshua and his brother were apparently born and reared in Babylon and were among the earliest to return from Exile. This description has been questioned by many scholars, especially in relation to the faithfulness of the Chronicler's account and the succession of the priesthood (see Mitchell, et al. *Haggai, Zechariah, Malachi and Jonah* ICC, 44). The book of Haggai records that Joshua was receptive to Haggai's exhortation regarding the condition of the temple (Hag 2:4) and that he, along with the remnant of the people, obeyed the voice of God and worked at rebuilding it (Hag 1:12, 14). Zechariah (6:11) says that when a group of exiles returned from Babylon, Zechariah was instructed by God to take their silver and gold and make a crown to put upon the head of Joshua, calling him Branch, as a symbol of his rebuilding the temple. But Mitchell et al. question whether this was the original reading, since this command contradicts other teaching in Zechariah and Haggai which says that Zerubbabel fulfilled the messianic prophecies. Thus Zerubbabel's name may have been used here and corrected by a later scribe who wanted to align this account with history, since no descendant of Zerubbabel is recorded as becoming high priest of the entire community (Mitchell et al., 185–86). Other scholars posit that both were crowned, and some that the text is correct as it stands (see Barker 1977). This person is probably the same one known in Ezra and Nehemiah as JESHUA, son of Jozadak, in which case the only other pertinent information about this Joshua is that some of his descendants married foreign women (Ezra 10:18; Baldwin *Haggai, Zechariah, Malachi* TOTC, 39).

4. A man from Beth-shemesh who owned a field in which the ark of the covenant stopped on its return from the Philistines to the people of Israel in Kiriath-jearim (1 Sam 6:14). Possibly reference is to the man who owned the field during the time of the narrator of the account (McCarter (*1 Samuel* AB, 136). The ark is recorded as being placed upon or beside a stone in his field (the stone did not serve as an altar, as v 14 might imply—see Gordon 1986: 102; contra Rehm *Samuel* EB, 19, n. 14), while the cart on which the ark was riding was split up so that a sacrifice of the milch cows pulling it could be made (1 Sam 6:18). McCarter *1 Samuel* AB, 137) contends that reference to the stone adds verisimilitude to the story, and Klein (*1 Samuel* WBC, 59) notes that the narrator does not recognize the apparent conflict of this sacrifice of cows with the OT law which mandated unblemished males (Lev 1:3; 22:19), possibly evidencing the antiquity of the elements in the account. There is no other record of this Joshua.

5. The father of Er and son of Eliezer according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:29). Joshua is omitted in D, which substitutes a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. The name Joshua as an ancestor of Jesus occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of 18 otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 501). Joshua is not included in Kuhn's (1923: 207–11) discussion of the supposed parallel lists of names in Luke 3:23–26 and 29–31.

6. Joshua ben Hananiah was a Palestinian rabbinic sage active during the early period of Yavneh (Jamnia), from the destruction of the temple in 70 to before the Bar Kokhba rebellion. *M. ʾAbot* 2:8 lists him as a disciple of Yohanan ben Zakkai, the putative founder of rabbinism. No ancient source outside of rabbinic literature attests to Joshua's existence.

The earliest and most historically useful materials about Joshua are halakic opinions that first appear in the Mishnah, ca. A.D. 200, perhaps 75 years after his death. These materials, nearly one-third of which are in the order of Purities *(Tohorot)*, were not redacted independently; and Joshua rarely appears alone in them. In over three-quarters of them his teaching is reported with that of sages or a named master, and nearly half of the earliest materials are disputes with Eliezer ben Hyrcanus. Akiba appears to have been a major tradent of Joshua's opinions.

Because Joshua's early teachings are so integrated with those of other masters and so shaped by the redaction of the Mishnah, they do not display a distinctive religious philosophy. However, in a set of disputes with Eliezer (*m. Ter.* 8:1–3; *Pesaḥ.* 6:5; *Šabb.* 19:4), Joshua rules that if a person performs a forbidden act under the assumption that it is permitted, he/she should not be penalized for the improper behavior. This view of the importance of intention in determining liability, particularly for handling heave offering, is important in teachings assigned to Ushan masters but not Yavneans; and it appears to be the dominant view of the Mishnah as a whole. Joshua's teaching may have played a role in the development of early rabbinism's position on the question of intention, especially in matters pertaining to the cult.

The early materials contain little biographical information about Joshua. *M. Maʿas. Š.* 5:9 implies that he was a Levite, and a long narrative at *m. Roš Haš.* 2:8–9 depicts

him in opposition to Gamaliel II's declaration of the new moon and thus in conflict with the Yavnean patriarchate.

Later materials also depict Joshua as an opponent of the patriarchate (*y. Ber.* 4:1 7c–d; *Ta'an.* 4:1 67d; *b. Ber.* 27b–28a). Other traditions place him in Peqi'in (*b. Sanh.* 32a) and allege that he was a poor needle maker or blacksmith (*y. Ber.* 4:1 7d; *b. Ber.* 28a).

Joshua is perhaps best known because of the story of the oven of Akhnai (*b. B. Meṣ.* 59b), in which, by quoting Deut 30:12 ("It [the Torah] is not in heaven"), he in principle rejects divine intervention in the interpretation of Scripture. He is alleged to have joined Eliezer in effecting Yohanan ben Zakkai's escape from Jerusalem in 70 (*'Abot R. Nat.* A, chap. 4, B; chap. 6; *b. Git.* 56a; *Lam. Rab.* 1.5.31) and to have opposed a Jewish rebellion against Hadrian (*Gen. Rab.* 64:10). The provenance and historicity of these later, mostly legendary, materials are difficult to determine. See also *EncJud* 10: 279–81; Avery-Peck 1985: 272–73.

WILLIAM SCOTT GREEN

JOSHUA, BOOK OF. The sixth book of the Hebrew Bible and first book of the Former Prophets in the OT canon. It describes the Israelite invasion of Canaan, followed by division of the land into territories assigned by sacred lot to the tribes of Israel. It is titled after the central figure in the book, Joshua son of Nun.

A. Outline of Contents
B. Context and Canonical Form
 1. Classic Theme of Biblical Tradition
 2. Stories and Lists in Editorial Frameworks
C. The Book of Joshua in Modern Study
 1. The Primary History: Tetrateuch and Deuteronomistic Corpus
 2. History of Traditions
 3. Archaeology and Social World
 4. Elohistic Israel and Yahwistic Israel
 5. Levitical Sponsorship: Dtn, Dtr 1, Dtr 2

A. Outline of Contents

The canonical book of Joshua follows a roughly sequential pattern. There are five major parts to the book: (1) theological moblization and entrance into the land (1:1–5:12); (2) the warfare in Canaan (5:13–11:23); (3) the inheritance (12:1–19:51); (4) provisions for keeping the peace and the teaching (20:1–21:45); (5) threat of civil war and how to avoid it (22:1–34); and (6) end of the era (23:1–24:33). Each of these, in turn, can be subdivided into smaller parts.

1. Theological Moblization and Entrance into the Land (1:1–5:12)
 a. Marching Orders (1:1–18)
 b. Reconnaissance of Jericho (2:1–24)
 c. Crossing the Jordan (3:1–4:18)
 d. Encampment at Gilgal (4:19–5:12)
 (1) Ecumenical Rationale and Royal Reaction (4:19–5:1)
 (2) Resumption of Circumcision (5:2–9)
 (3) Resumption of Passover (5:10–12)
2. Warfare in Canaan (5:13–11:23)
 a. First Phase: South and Central Hills (5:13–10:43)
 (1) The Angelic Commander (5:13–15)
 (2) Jericho: Destruction and Curse (6:1–27)
 (3) Ai ("The Ruin"): Two Battles (7:1–8:29)
 (4) Shechem Covenant (8:30–35)
 (5) South-central Canaan (9:1–10:39)
 (6) Summary of the First Phase (10:40–43)
 b. Second Phase: Hazor and the Far North (11:1–15)
 c. Summary of Conquest (11:16–23)
3. The Inheritance (12:1–19:51)
 a. List of the Former Kingdoms (12:1–24)
 b. Redistribution of the Land (13:1–19:51)
 (1) Land that Remained to Be Taken (13:1–7)
 (2) Retrospect: Moses and Transjordanian Territories (13:8–33)
 (3) Cisjordanian Territories: Early Phase (14:1–17:18)
 (4) Cisjordanian Territories: Shiloh Phase (18:1–19:51)
4. Provisions for Keeping the Peace and the Teaching (20:1–21:45)
 a. Cities of Refuge, to Counter Blood Feud (20:1–9)
 b. Residential and Pasture Rights for the Levites (21:1–42)
 c. Summary: Yahweh True to His Word (21:43–45)
5. Threat of Civil War and How to Avoid It (22:1–34)
 a. Transjordanian Tribes: Exhortation, Blessing, Dismissal (22:1–8)
 b. Religious Strife and Resolution without Joshua (22:9–34)
6. End of the Era (23:1–24:33)
 a. Joshua's Farewell Address; Ending in Threat (23:1–16)
 b. The Shechem Covenant; Beginning with Promise (24:1–28)
 c. Various Burial Notices (24:29–33)

B. Context and Canonical Form

1. Classic Theme of Biblical Tradition. The book of Joshua—which presupposes and continues a story line that begins in the book of Exodus (how Yahweh liberated a group of state slaves in Egypt and reconstituted them, by covenant in the Sinai Wilderness, to be a special possession of Yahweh, who claims ownership of all the earth) and continues through Numbers (a generation spent wandering in the wilderness) and Deuteronomy (renewal of covenant on Moab)—recounts a classic theme in biblical tradition: how Israel came to be established in the land of Canaan. Yahweh gave Israel a land on which to live, astride the Jordan, with Yahweh as their only sovereign. Many city-kingdoms had been destroyed (Joshua 1–12), the redistributed land generally pacified (chaps. 13–22), and the covenant renewed yet again (chaps. 23–24).

The "Conquest" as Yahweh's gift, a supreme example of divine grace, was a recurring motif in stories told for both edification and entertainment, in which parents and

teacher-priests explained to children and worshippers the meaning of their life together as Israelites (Joshua 2–11). It was a theme regularly sung in worship, exalting Yahweh as the ultimate power at work in the world—protecting the weak and breaking the chains of bondage—so that in the Bible love and justice became virtual synonyms, also known as righteousness (see for example, Pss 44:1–8; 78:54–55; 80:8–9, 11; 105:43–45; 106:34–38; 114:1–8; 135:10–12; 136:17–22).

Prophets in Israel and Judah used the same theme, in many of the same ways, but more frequently as expressions of God's prior beneficence, forming the background to the Sovereign's indictment for breach of covenant (see for example Hosea 11; 13:4–6; Amos 2:9–10; Micah 4–6; Jer 2:6–7; 32:20–23; Ezek 20:5–6).

It is a curious fact, however, that in their allusions to the "Conquest" era, psalmists and prophets make only generalized references to the takeover of W Palestine (recounted at length in Joshua), while frequently making specific reference to the prior era, the movement into Transjordan under leadership of Moses (stories in Numbers 21–35, which are only summarized briefly in Joshua through a flashback in 13:8–33). Thus the book of Joshua reflects a complicated process of tradition formation and literary composition, extending from experiences which early generated nuclear stories to the time of the final editors, reflecting both the spectacular rise and tragic fall of the N and S monarchies (Wright *Joshua* AB, 5–27). It is the long history of some 600 years subsequent to the career of Joshua that will explain the didactic arrangement and rhetorical structure of the finished book, incorporating complementary perspectives from the end of the monarchic era. The old story of victorious entrance into the land that was God's gift was edited for the last time not long before or after the Babylonian invasions of 598 and 587 B.C.E. It is less widely recognized, perhaps, that the idealized story of Joshua as military commander par excellence was finally told with a lively sense of humor and priestly self-irony, of a sort rarely encountered outside the ancient Scriptures.

2. Stories and Lists in Editorial Frameworks. While mere mention of Joshua may evoke mental images of massive invasion by a unified national army, proceeding to victories of something like genocidal proportions (an image which indeed seems to be mirrored in a number of editorial passages of Joshua), the arrangement of the book and close reading evoke a different image; but one not so quick to come to sharp focus. Fully one-fifth of the total book is devoted to the crossing of the Jordan and preparations for the first battle, at the choice oasis of Jericho. Following the introduction of Joshua as commander who is to be strictly obedient to Yahweh's *tôrâ* in chap. 1, incongruities abound. Spies sent from Shittim to reconnoiter "all the land," proceed only as far as Jericho and the house of Rahab the harlot, who speaks as though she had been intently studying the book of Deuteronomy. Thus the spies, providentially, learn all that they need to know concerning "all the land."

After the elaborately detailed, ritually ordered crossing of the Jordan from Shittim to Gilgal (3:1–4:18), again providentially facilitated, the army encamped at Gilgal allows itself to be temporarily incapacitated by undergoing the ritual surgery of circumcision and then celebrates the Passover. Neither circumcision nor Passover was observed during the wilderness period according to the text, but both would become indispensable marks of Jewish identity after the Babylonian invasions and deportations. Their resumption has high didactic value at just this point in the story line.

The second major segment of the book tells a mere handful of warfare stories, beginning abruptly with an obscure pericope announcing the arrival of a heavenly warrior on holy ground (5:13–15). The unit makes sure in any case that we know who was ultimately and truly in command at the fall of Jericho, and it was not Joshua.

The victory at Jericho in chap. 6 similarly shows timely collaboration of (1) strict obedience to Yahweh's command and (2) Providence, when the walls tumble down. And yet, after all their obedient efforts, the Israelites would not be allowed to enjoy the fruits of victory. Jericho is cursed by Joshua for some unspecified reason and placed forever off-limits to Israelite settlement. Furthermore, Joshua had specified that no booty for private gain was to be taken from Jericho.

While the performance of Joshua and Israel at Jericho is presented as nearly flawless, it is just the opposite at Ai (or, more precisely Ha-Ai, "The Ruin") in the second warfare story (chap. 7). Here a serious miscalculation of opposing strength (and, it may be implied, failure to consult the oracle) led to a nearly disastrous defeat. An elaborate accounting for the defeat is given in the story of Achan's violation of the booty decree *(ḥerem)* at Jericho. In the sequel to this defeat, victory is providentially assured as Yahweh takes direct command, ordering an ambush behind the town and then drawing defenders out of "The Ruin." Scholars regularly note literary affinities with the strategy for final victory of "Israel," after two resounding defeats, in the civil war with Benjamin which concludes the wider era (Judges 20).

In Joshua the story line takes us next, for a brief interlude, to the north-central hill country, the Shechem valley, flanked by Mt. Gerizim and Mt. Ebal. On the latter Joshua built an altar. He wrote on the stones a copy of Yahweh's *tôrâ* (cf. chap. 1) and read it all, "the blessing and the curse," to the people assembled before the levitical priests charged with protective custody of Yahweh's covenant ark. In the LXX this note about the Shechem assembly is placed *after* the general Canaanite reaction, which is described next in MT.

In chap. 9 the story line returns, as abruptly as it had digressed in 8:30, to the south-central highlands, where a summit gathering of Canaanite kings is underway, while Joshua and the fighting force are to be found at Gilgal. The Hivite residents of Gibeon, speaking for a tetrapolis of villages on the N flank of Jerusalem and claiming to be, like Joshua and his followers, brand-new immigrants, trick the leaders of Israel into a defensive alliance. It is specified that Israelite leaders failed to consult the oracle. The Gibeonite embassy is familiar with the Exodus and Transjordanian conquest tradition (9:9–10), as well as Deuteronomic teaching regarding relations with distant and nearby towns (Deuteronomy 20), but makes no reference to anything that has happened thus far in Joshua 1–8. When the ruse is discovered, "the leaders of the Israelite

congregation" propose a solution that assigns lowest social status (temple slaves) to the Gibeonites, which they readily accept; and Joshua is relieved of direct responsibility for the beginning of the affair. Scholars regularly note literary affinities with the tragicomic sequel to the Benjaminite civil war (Judges 21), where the "elders" similarly find an ingenious, if considerably less than admirable, way to maintain a distinctive, twelve-tribe Israelite identity.

In chap. 10 the Israelite-Gibeonite treaty triggers a coalescence of Gibeon's nearby S kingly neighbors: Adonizedek (of Jerusalem), Hoham (Hebron), Piram (Jarmuth), Japhia (Lachish), and Debir (Eglon). Joshua and the force are summoned from Gilgal, and Gibeon is spared because Yahweh providentially marshals heavenly forces (sun and moon) to participate in the right cause, that is, keeping treaty faith (10:1–14). Then, as though unaware of v 15, where Joshua and all Israel return to Gilgal, the chapter continues with another preformed story (vv 16–27) about Joshua's pursuit and capture of the five kings in a cave at Makkedah, followed by their execution and exposure of the corpses. The chapter continues with yet another distinct unit (vv 28–39) reporting successes against seven opponents as sequel to the defense of Gibeon. The list begins with Makkedah and proceeds to Libnah. In addition to Lachish and Hebron from the preceding units, it includes Eglon and Debir (both now as *town* names) and centers in a reference to Horam of Gezer, whose forces this unit understands were also involved in the Canaanite muster.

Nothing more is said, whether in narrative or archival form, in the second major segment of Joshua about warfare in the center and the S, which is hyperbolically summarized to include the Negeb (10:40–42). Except for digression to the Shechem neighborhood (8:30–35) and the sequel to the defense of Gibeon (10:16–39), all the action occurs in the narrowly restricted area that will be inherited by Benjamin (assigned and occupied, 18:11–23) and Dan (assigned but not successfully settled, 19:40–48; cf. Judg 1:34; 18:1–31).

If the convocation between Ebal and Gerizim (8:30–35) is somehow supposed to account for "all the land" between the latitude of Gibeon and the Esdraelon, then one brief story alone (11:1–23) is told to account for the entire N third of the Cisjordanian territorial claims (Esdraelon and Galilee). The victory against a mighty coalition of kings headed by Jabin of Hazor was accomplished by a strategem (hamstringing the chariot horses) considered by the narrator to be truly inspired. And it was followed through to a genocidal conclusion, down the chain of command: Yahweh to Moses, Moses to Joshua, Joshua to the Israelite forces (11:14–15). This is clearly rhetorical exaggeration, as indicated by a general summary statement (11:16–22), before we read that Joshua gave it for an inheritance to Israel "and the land was at rest from warfare" (v 23). At this point there is an abrupt transition in chap. 12; and the reader moves onto very different literary terrain, the description of territorial allotments to the tribes.

After devoting a mere one-fourth of the book to "Conquest" (chaps. 6–11, 16 columns in RSV format) but appearing to leave large geographic gaps, the finished book devotes equal space (16 columns in RSV) to redistribution of the land, leaving no gaps. Without prejudging questions of historicity (to which we shall return below), the reader encounters a mixture of idealization and redactional corrective which together yield a bifocal perspective on the entire era. In the remainder of this description it will be necessary, here and there, to include additional critical commentary.

Chapter 12 serves as a retrospective introduction to the land division, listing 31 kings on both sides of the Jordan who had been defeated by the people of Israel and had their land repossessed. The chapter has long been recognized as, in some way, secondary to the story line because it includes a number of kings and towns not mentioned anywhere else in the book.

Chapter 13, where Joshua has attained a ripe old age, begins with Yahweh reminding the aged commander of all the land that yet remained to be conquered (13:1–6), thus providing an expansive corrective to the preceding hyperbolic summaries. Then, instead of Joshua's proceeding directly to allotments for the nine and one-half tribes in Cisjordan, as he is commanded to do in v 7, narrative action is suspended for a lengthy review of the Transjordanian territories previously assigned by Moses. The section is replete with references to the narrative tradition of Numbers 21ff., takes special notice of arrested developments in central and N Transjordan (Geshur and Maacath, v 13), and twice emphasizes exceptional status for Levites (vv 14 and 33).

Chapter 14 begins as though the assignment of land to the Cisjordanian tribes is, at last, about to begin. The place of assembly is not specified; and it is now Eleazar the priest and Joshua (in that order) who preside over the sacred lot, as they do also in the summary to the section (19:51); and Shiloh (after 18:1) is specified as the place of assembly. In chap. 14, however, after a brief summary of Moses' assignment by lot to the Transjordanian tribes we read how Joshua at Gilgal (sic) receives an embassy from Judah pressing the specific claim of Caleb's clan to Hebron, promised by Moses and now honored by Joshua (14:6–15a). The unit is perhaps to be read as a flashback, although the syntax in v 6 is not disjunctive. In any case with Caleb's capture of Hebron (specifically offsetting the earlier, generalized claim to capture of Hebron by Joshua and all Israel) another Conquest story was preserved, after which we read again and for the last time that "the land was at rest from warfare" (14:15b). The repetition of this formula looks like a standard framing device, enclosing material and interests which have been either presupposed or overlooked thus far and providing the division of Cisjordan with a new introduction. The new introduction gives a priority to the priestly role in events and decision making that is otherwise played down in Joshua, except for the ritual processions, the passing references to the oracle before battle, and two appearances of the Levites as custodians of the ark of the covenant. With this "corrective," description of Cisjordanian allotments will, at last, begin.

Chapter 15 (3 of the 16 columns for the "inheritance" in RSV) is all about Judah. A description of borders (vv 1–12) and a list of towns which are readily but variously grouped by scholars into twelve districts (vv 20–62) frame another story of conquest by clans, not tribes or "all Israel" (Caleb at Hebron again and Othniel at Debir). The second

is a doublet of Judg 1:11–15. While scholars generally suspect that the description of borders for Judah, and the remaining tribes, reflects a complicated history beginning in the premonarchic era, there is general agreement that the segmented list of cities in Judah reflects administrative organization from the time of David or later. The list includes a number of towns which are not otherwise mentioned in the early tradition and/or appear from archaeology to have been first settled in the 10th century or later.

Chapters 16 and 17 are all about the sons of Joseph. There is more than likely some historical connection between tribal alignments known from 18th-century Mari texts ("sons of the left [the north]" and "yaminites [southerners]") and the biblical Rachel tribes (Joseph and Benjamin). Here, however, Joseph is counted as two tribes, Ephraim and Manasseh, with the latter already partly settled E of the Jordan. The S border of "Joseph," shared with Benjamin and Dan, is sketchily described (16:1–3), before the specific description of Ephraim begins, giving a more detailed description of its border with W Manasseh (16:5–8). We also learn that there are Ephraimite towns which lie entirely within the territory of Manasseh (v 16), while Canaanites survive in Gezer "to this day" (v 10) when the redactor was living.

The inheritance of Manasseh (17:1–13) shows a distinctive form. After a general introduction (v 1), this section falls into two parts concerned with subgroups (vv 2–6) and borders (vv 7–13). First mentioned is allotment of Gilead and Bashan, in N Transjordan, to Machir, here described as the firstborn of Manasseh and "father" of Gilead. Machir (simply "son of Manasseh" in 13:31) appears to be a constituency originally concentrated in Cisjordan, where an element of it persists effectively as late as the Song of Deborah (Judg 5:14), but eventually shifted in part to Transjordan. At the outset of chap. 17 there is no hint that this assignment in Transjordan happened in the Mosaic era (thus reinforcing the scholarly hunch that chap. 13 belongs to a secondary or "corrective" stratum). Next comes a list of the rest of Manasseh's clans (a number of which do double-duty as place names in north-central Cisjordan): Abiezer, Helek, Asriel, Shechem, Hepher, and Shemida (v 2). Two of the six, Helek and Shemida, also appear as prominent locales in the Samaria ostraca.

The distinctive description of Manasseh's inheritance continues, with allotment to daughters of Zelophehad (of the clan of "Hepher" in v 2) because he had no male heirs (vv 3–6). That is, the territory of Hepher is subdivided as inheritance for the five daughters (Mahlah, Noah, Hoglah, Milcah, and Tirzah), where again the personal name, e.g., Tirzah, may also appear as a prominent place name. The result is a total of ten shares for W Manasseh. Here again, what looks like a supplementary and exceptional insertion has the priest Eleazar and Joshua, in that order, presiding.

Finally the territory of W Manasseh is described (17:7–13) in a form that intersperses border description and town list. For description of the N territories there was apparently no archival source comparable to that in the S for Judah and, as we shall see, Benjamin.

Chapter 17 concludes with yet another story where Joshua alone presides as judge (as with Caleb's petition in 14:6–15). At issue now is Ephraim's complaint about receiving only one portion (as compared, by implication, with W Manasseh's ten). Joshua's solution is to direct Ephraim to the forested hill country, with instructions to clear it and thus expand Ephraim's inhabitable terrain.

With all of chaps. 14–17 devoted to Judah and the Joseph tribes, allotments for the remaining seven Cisjordanian tribes are briefly reported, without narrative interruption. These allotments are made on the basis of an extensive land description ordered by Joshua, who alone is mentioned as presiding, in an expansive introduction to the section (18:1–10). The place of assembly is now specified as Shiloh, as in the stories of Samuel at the end of the premonarchic era.

For Benjamin the description returns to the pattern displayed for Judah, its neighbor on the S: borders (18:11–20) and segmented town list (18:21–28). The towns are numerous and close together, clustered in two groups. The E cluster (vv 21–24) includes a portion of territory extending considerably N of the border with Joseph. Here it is not a matter of making exceptions for residential, farming, or grazing rights of one tribe within territory of another (as in 16:9; 17:8; and passages pertaining to Levites). Rather, the description seems to reflect a time after the split of the monarchy when Benjamin and SE Ephraim were both administered from Jerusalem. It is probable that in a much earlier period Benjamin had ranged much farther S of its "border" with Judah, since the names of groups best known among the "Benjaminites" at Mari in the 17th century survive as extinct clans (Er and Onan, Genesis 38) in Judahite traditions (Albright 1973: 7–8). "Biblical" Benjamin was at last crowded into a narrow corridor stretching across the watershed and down to the Jordan.

Simeon's towns (19:1–9), with no trace of boundary description, fall entirely within the larger territory of Judah. It appears from the story in Genesis 34, at Shechem, that Simeon (together with Levi) had at an early period ranged much farther N.

Zebulun's inheritance (19:10–16) was a part of the poorer S extremity of the Galilee mountains and a contiguous wedge out into the Jezreel plain.

For Issachar (19:17–23) there is even less attempt to trace a border. Three fixed reference points are given (Jezreel, Tabor, Jordan river) with two segments of a town listed interspersed. Issachar, whose name means "hired man," would be the center of continuing struggle to control the fertile fields and strategic crossroads in the Jezreel, not finally won for Israel until the days of Deborah and Barak (Judges 4–5).

To Asher (19:24–31) fell one of the most prosperous areas in the land, the lush plain of Acco and its narrow N reaches as far as Rosh ha-Niqra (ancient "Ladder of Tyre"), together with territory inland from the great Canaanite cities farther N along the modern Lebanese coast. It is not clear, however, that Tyre and Sidon were considered part of Israelite territory. Again, the description is not highly unified. A fabled man named "Qazardi, chief of Aser" in papyrus Anastasi I (*ANET*, 477) may belong to the pre-Yahwist constituency called Asher. No doubt the earlier concentration of Asherites was on the W slopes of lower Galilee. Qazardi's territory has deep ravines.

Naphtali's description, borders and town list, is more coherent (19:32–39). Controlling the major trade routes

connecting the coastal plain and port of Acco with all points N and NE, Naphtali enjoyed the heartland of Galilee.

Finally, Dan's entry (19:40–48) has two parts. The first (vv 40–47a) describes Dan's original allotment on the coastal plain (where its neighbors were Judah, Benjamin, and Ephraim), resembling the general form variously employed throughout these chaps.: here a few elements of border description, but mostly towns listed without directional connectives. The second part (vv 47b–48) reports continued local resistance to Dan's claim and the tribe's relocation in the far N (see Judges 17–18). In the earliest period the people of Dan may have been known as seafarers (Judg 5:17). The name is plausibly connected with one of the Sea Peoples, the Dananu, and the move to relocate in the N may well be related to events represented by destruction of Tel Qasile (founded by Sea Peoples) and its resettlement by another such group, most likely the Shardan (Yadin 1968: 9–23).

The conclusion to this third major segment of the book (19:49–51) is also in two parts. The first reports that Joshua's request for the town of Timnath-serah in the Ephraimite highlands as his personal inheritance was answered affirmatively by Yahweh and granted by the assembly. This rounds off the second phase of land division, which began in 18:1 at Shiloh, with Joshua alone named in the text. It is followed by another note in v 51, where the priest Eleazar and Joshua (in that order) have completed the task they began in 14:1.

At the end of chap. 19, with the story of Conquest told (chaps. 1–11) and redistribution of land by sacred lot completed (chaps. 12–19), the reader is left to wonder perhaps about the tribe of Levi, whose place among the "twelve tribes" seems to have been filled by division of the great N tribe of Joseph (Ephraim and Manasseh). Or, if one were not inclined to wonder about Levi, one might proceed directly to Joshua's farewell address (chap. 23) and the "all Israel" covenant at Shechem (chap. 24), with no sense of a gap but a sure sense of redundancy in the final chapters.

Chapters 20–22 must therefore be of high rhetorical significance in the canonical book. Two social institutions are here singled out for special attention before proceeding in chap. 22 to the story of Israel's life on the land, astride the Jordan river, as Yahweh's gracious gift.

The cities of refuge (chap. 20) are a special group of six towns (which also appear in the following list of levitical towns (chap. 21). There are three on each side of the Jordan (N, central, and S), designated to provide protective asylum for one who might otherwise become the innocent target of private vengeance. The plan is announced by Moses (Num 35:9–34), and the three Transjordanian towns are so designated by Moses (Deut 4:41–43), leaving appointment of three in Cisjordan as a matter for exhortation by Moses (Deut 19:1–13). While it has been argued that the system is a late (7th-century) development (McKeating 1975: 53–55), there is no reference to the institution in the historical books of 1 and 2 Samuel, 1 and 2 Kings, and 1 and 2 Chronicles; and nowhere after establishment of monarchy and strong central government are they presupposed (they were no longer needed). They are either historical (and early) or utopian, much more likely the former; for there are remarkably few examples of private vengeance in the Bible. Classic examples are seen in the stories of Gideon (Judges 8) and the anonymous N Levite (Judges 19–20), both of whom are presented in scathing caricature, probably for this reason. Cain is the exception, the guilty one who is, nevertheless, protected by deity. But Cain was not Israelite; he lived, as it were, in prehistory, as part of the universal human problem, in early Yahwist perspective. That problem is only compounded when human "vengeance" acquires rival religious sponsorship, as will nearly happen in Joshua 22.

Chapter 21 at last accounts for the Dispersion of Levites, who are to have residential and grazing rights at specified towns, 48 in all, in each of the 12 territories. Three questions persist in critical study: (1) the origin and purpose of the system, (2) the background of the surviving list (with parallels in 1 Chr 6:39–66—Eng 54–81, and (3) the effect of redactional use in Joshua 21 (see below, especially C.1 and C.5).

The summary which follows this section (Josh 21:43–45) makes no reference, direct or otherwise, to the refuge cities and levitical towns of chaps. 20–21 but follows coherently the end of chap. 19, from which it has been detached for insertion of these two key institutions. At last all is in readiness for the story of Israel's life in Transjordan and Canaan.

After Joshua's blessing and dismissal of the Transjordanian tribes at Shiloh (22:1–9), we plunge abruptly into a story of near civil war on the E-W axis. At issue is an altar near the Jordan (on which side is not clear), built by the E tribes to the alarm of the W tribes. Outright warfare is only averted by lengthy negotiation (the logic of the arguments unfathomable). The only hero is the head of the W embassy Phinehas ben Eleazar the priest. Joshua is not mentioned in the story. Another incongruity: this Phinehas, here presiding at Shiloh, is apparently a predecessor of the ranking Aaronite priest at Bethel, whom the Israelites will tardily consult in the warfare with Benjamin at the end of the wider era (Judg 20:27–29), there at last to receive another reliable oracle. The story here has a happy ending. The W tribes are satisfied and the E tribes give a confessional sentence name to their altar: "There is a witness between us / Yahweh is truly God!" (22:34). It is impossible to suppress the rhetorical relationship between the stories in Josh 22:10–34 and Judg 19–20; the first a close brush with civil war on the E-W axis (early in the era), the other a tragically costly civil war on the N-S axis of Cisjordan (at the end of the era).

Joshua's farewell address in chap. 23 (place unspecified), returns to the subject of an unfinished conquest. Further success, we read, will depend upon following most scrupulously "all that is written in the book of the law of Moses" (v 6), so as to maintain Israel's Yahwist identity. The summary command is "to love Yahweh your God" (v 11), after which the speech spirals downward to end in a bone-jarring warning: threat of exile and total national destruction, disappearance from among the family of nations.

The book concludes in chap. 24 with an expansive description of the covenant of all the tribes at Shechem, where Joshua presides (vv 1–28, 31). The narrative is interrupted in vv 29–30 for the notice of Joshua's death

and burial at Timnath-serah, together with the flint knives used in the circumcision at Gilgal (according to LXX). Also buried at Shechem were the bones of Joseph, in a burial plot legally purchased by his father Jacob. Eleazar also died, to be buried in "the Gibeah" ("the hill?" See LXX) belonging to Phinehas his son. Thus, among the worthies of the era, it is Eleazar who gets the last word in the MT. The LXX continues, describing apostasy that introduces the following era of the judges.

In both LXX and MT the book of Joshua appears to end twice: once with Joshua's threatening exhortation (at Shiloh, if we take a lead from preceding context), and again with the people-forming promises at Shechem.

C. The Book of Joshua in Modern Study

As the preceding review of contents suggests, the book of Joshua raises many and complicated questions for the interpreter. How should one understand the evidence for a process preserving stories over a span of centuries but also reflecting historical developments during the interim between original event and final telling? What should one make of the obvious interest in certain towns and not others as places of assembly and the role of Yahweh's portable throne (ark of the covenant)? How does archaeology, especially with a rising interest in ancient Israel's social world, contribute to understanding of the text? What about the still-earlier beginning of the story line in Genesis 12–50, which is also in the background of the classic theme of new constitution at Sinai? Who were the traditionalists who contributed to the bifocal perspective in the canonical book, and what was their social location down the centuries?

1. The Primary History: Tetrateuch and Deuteronomistic Corpus. There is now a broad scholarly consensus that Joshua is, in some sense, a "Deuteronomistic" book. Deuteronomy presents itself as a collection of farewell speeches by Moses, given as he presides over a renewal of the Sinai covenant, with the people of Israel poised for invasion from a base in the "plains of Moab." The latter topographical term refers to the location of repeated Moabite incursions on the W edge of the Transjordanian plateau near the escarpment and N of the recognized political border of Moab at the Arnon. Deuteronomy, it is agreed on all hands, shows a pattern for the organization and governance of Israel, and for the role of Moses, that is modeled on forms and practices of international diplomacy. Moses is ambassador-mediator between God and the people as subjects of sworn allegiance to Yahweh—the only Sovereign of the universe.

Yahweh as Divine Warrior and Israel's Commander in Chief will redistribute the land as tribal "inheritances." The Heb term *nahălâ*, "inheritance" stands for the suzerain's grant of a plot of ground (hence a "fief" or "estate") in exchange for the promise of military service upon call.

With Ten Commandments describing binding basic policy of the realm (Deuteronomy 5) and with lengthy exhortation effectively obliterating any distinction between loyalty and love in relationship to Yahweh (chaps. 6–11), Deuteronomy sets forth the conditions upon which alone the Conquest will succeed and endure (chaps. 12–26), with alternatives clear: blessing or curse (chaps. 27–28). Glimpses of a preexilic process toward "canonization" of Deuteronomic teaching are seen in the accounts of reforms sponsored by the Jerusalem kings: Hezekiah (2 Kgs 18:1–3; 2 Chronicles 29–31) and Josiah (2 Kings 22–23; 2 Chronicles 34–35), where details of the reforms look like mirror images, only occasionally blurred, of the Deuteronomic "legislation."

The book of Joshua belongs therefore, together with Deuteronomy, as a confessional introduction to the generally unified story of Israel's life on the land astride the Jordan that unfolds from Joshua through 2 Kings (Wright *Joshua* AB, 41–66). Deuteronomistic influence in Joshua is seen most directly in the framework which underscores the field commander's dependence upon the book of the Torah, that is, the "treaty teaching" (Josh 1:7–8; 23:6), and Joshua's attentiveness to the word of Yahweh as Commander in Chief (throughout).

Yet the book also displays the sorts of structural and linguistic disjunctures (doublets, contradictions, lexical and stylistic variations which appear to cluster) that have encouraged attempts to trace the narrative sources of Genesis–Numbers (J, E, P) into the book of Joshua and beyond. Such source criticism has generally attributed the bulk of chaps. 1–11 to E, with the qualification that D has recast stories to such an extent that J is almost entirely suppressed and little survives of E that is unrevised. The P source is not present as a narrative source except perhaps in chap. 22 (which, however, is most unlike P stories in the books preceding Deuteronomy). On the other hand, it was P, as argued by many scholars, that provided archival material for the bulk of the chapters on land division. But if so, there are surprisingly scant traces of specifically "Priestly" editing, if the concerns of the latter are characteristically represented by such material as Leviticus and Ezekiel. Joshua's farewell address is widely recognized by source critics as a Deuteronomistic composition, while chap. 24 stems from a Deuteronomistic rewrite of E. In all this one encounters an influence of D so pervasive in narratives (with corresponding absence of P) that there is little to sustain further search for tetrateuchal sources in Joshua, along the older lines. The quest has been mostly abandoned. Scholars now posit a Primary History comprised of: (1) a Tetrateuch, book of Genesis–Numbers (epic sources of the peoples' origins framing large blocks of "Priestly" materials), introducing (2) a "Deuteronomistic History" in Joshua–2 Kings (Freedman, *IDB* 3: 711–27).

By far the clearest rhetorical connections of Deuteronomy are with the books which follow it. In addition to the framework passages in Joshua, noted above, compare the speeches of chief protagonists in Joshua, beginning with the speeches of Yahweh (1:2–9; also 3:7–8; 6:2; 7:10–15; 8:1, 18; 11:6; 13:1–7; 20:2) and Joshua (1:10–11, 13–15; also 3:5–6, 9–10; 4:21–24; 19:20, 23; 23:2–16; 24:1–15).

Deuteronomistic influence is also found within stories. In the spy story it is notably Rahab the non-Israelite who uses Deuteronomic reasoning (2:1–11). The embassy from Gibeon depends on a knowledge of Deuteronomic regulations for different approaches to near and distant cities (Deuteronomy 20) in its negotiations with Israelite leaders (9:7–10), whereas the latter can find no such precedent in order to undo the problematic covenant (9:16–25). In these stories we note a sharp contrast with signs of Deuteronomistic influence in stories of the later premonarchic

period. In the book of Judges, the marks of Deuteronomistic rhetoric are largely confined to framework passages, and the old stories are left unrevised because they illustrate subsequent hard times that led to the establishment of monarchy. In Joshua, however, the old stories are retold in such a way as to present the leadership of Joshua as ideal, yet not itself adequate without timely collaboration of Yahweh and the cosmic army.

The two Shechem scenes (8:30–35 and chap. 24) proceed from direct command of Moses in Deuteronomy 27. The chain of command is emphasized (1:7–8) and reemphasized (4:10; 11:11–14, 20, 23): Yahweh to Moses, Moses' *tôrâ* to Joshua, Joshua to the people.

2. History of Traditions. More productive than the older approach via literary source documents has been the recent half century of efforts to reconstruct the origins of narrative and archival materials taken up in Joshua in relation to various tribal constituencies that formed Israel in the pre-state period and their major religious centers.

Both the arrangements at the crossing of the Jordan to set up 12 stones at Gilgal as a memorial of the miraculous event (chaps. 3–4) and the proceedings at the capture of Jericho (chap. 6) read like accounts of liturgical happenings. Together they frame the notices about circumcision and Passover at Gilgal. From this point on, Joshua and the people are found frequently at Gilgal (9:6; 10:6, 15, 43; 14:6). At the end of the wider era, the Benjaminite Saul will become king at Gilgal (1 Sam 11:12–15; cf. 13:2–15a) in one stratum of the text.

It is a credible conclusion that nearly one-fourth of the book of Joshua reflects the story-telling and liturgical reenactment of "conquest" at a Gilgal sanctuary, which continued to flourish (2 Kgs 2:1; 4–38) long after the legitimating role had been taken over by royal sanctuaries: Jerusalem in the S, Bethel and Dan in the N. Thereafter Gilgal is denounced by prophets from both the N and the S (Hos 4:15; 9:15; 12:11; Amos 4:14; 5:15).

It is possible to make out broad lines of the "ritual conquest" formerly celebrated at Gilgal, as worked out originally by Kraus (1951) and others (esp. Soggin 1966), later appropriated in the Jerusalem cultus and postmonarchic circles (Cross *CMHE,* 103–11):

1. The people sanctify themselves as for a divinely sanctioned war, or to approach a sanctuary (Josh 3:5).
2. The covenant ark, throne of the deity and war palladium, is carried in solemn procession (= battle array) to the Gilgal sanctuary.
3. The Jordan, temporarily dammed, plays the role of the Red Sea.
4. Twelve stones are set up at the sanctuary (cf. Exod 24:4), symbolic of the covenanted tribes.
5. The fighting force is circumcised and the Passover celebrated.
6. The angelic general of Yahweh's army appears at the holy place.

Within this configuration, however, it is the interlude for resumption of circumcision and Passover that present serious disjunctions in the progress of the narrative, where, like the angelic commander, they are never again echoed in the book. It is more likely that the notices about circumcision and Passover are secondary in the story line and that the arrival of the commander launches the second large segment of the book.

With the exception of (1) Achan's execution and burial (at a site presumably in Judah), (2) the diversion to Shechem (in the heartland of "Joseph"), and (3) the S campaign as sequel to defense of Gibeon (backbone of Judah), all of the action in chaps. 2–10 takes place in territory that will be finally assigned to Benjamin (18:11–28). If the narrative configuration of these chapters reflects the compilers' indebtedness to an early Gilgal version of the crossing plus a handful of more narrowly "Benjaminite" stories, it will explain the absence of specific allusions to the Transjordanian conquest led by Moses, except in disjunctive and supplementary contexts (e.g., 1:12–18; 13:1–14:15; 17:3–6).

Apart from the story of the victory against Jabin's forces in Galilee, with no clear signs of place attachment in this case (and considerable debate about the story's relationship to tradition represented in Judges 4–5), N tradition in the narratives of Joshua is confined to the two scenes at Shechem (8:30–35; and 24:1–28). The two units represent at least a chronological disagreement: did the Shechem assembly precede or follow the redistribution of the land? It is the first of these scenes that is most often regarded by critics as secondary, on stylistic grounds. If it therefore serves as chronological corrective to chap. 24, then there is no clear indication of where the first phase of land reform in Cisjordan (chaps. 14–17) occurs. The MT has Joshua presiding at Gilgal in the Gibeon story (9:6; 10:6, 15) and returning there after the S campaign (10:43). The LXX, however, lacking 10:15 and 43, may be the better text. The one remaining reference to Joshua at Gilgal (14:6) may be read as flashback (reading the converted imperfect Heb verb as a pluperfect). In other words it appears that there was a strong tradition according to which the Shechem assembly was presupposition, not consequence, of the warfare outside of "Benjamin." This leaves a strong presumption that the center for the first phase of land division in Cisjordan (chaps. 14–17) was at Shechem. Those chapters in fact deal only with the most extensive tribal territories, Judah and the Joseph tribes, using lists, to be sure, which in present form are not earlier than the period of the divided monarchy. Thus it is not surprising that elsewhere the clearest evidence of a more extensive document describing borders and listing towns enclosed thereby is confined to Benjamin, narrowly confined between Judah and Joseph at the beginning of the Shiloh-phase allotments (18:11–28). This use of an archive from the period of the Monarchy tallies well with the claims of the warfare stories. We may suspect that Benjamin's turf was so war torn that the tribe was unable to consolidate its own territorial claim until the Shiloh phase.

The genesis of Shiloh tradition is obscure. Shiloh is abruptly mentioned for the first time in 18:1 as the starting point for a survey of Cisjordan, to provide the basis for territories of the seven remaining constituencies. Shiloh elsewhere plays a prominent role only late in the wider era, when Gilgal is once again prominent. It may be that the eclipse of Shechem and the shift to Shiloh were historically related to the aspirations of Gideon and the sequel, counterrevolution at Shechem, represented by the story of

Abimelech (Judges 8–9), which is reasonably correlated with a massive destruction stratum at the site (Tell Balata) from the third quarter of the 12th century (give or take a decade). If the shift to Shiloh occurred early in the movement to restore a monarchy in the central highlands, Joshua's presence in chapters 18–19 is entirely plausible. The stories of Gideon and Abimelech would seriously blur the idealized Conquest picture and were appropriately reserved for "Book Two" of Israel's life in the land. The subsequent eclipse of Shiloh, surely due to Philistine offensives into the highlands, left Gilgal in the Jordan valley as the place of the muster at the end of the wider era (as it had been in the beginning) and the elevation of Saul.

Turning from Benjamin to the remaining territorial description (chap. 19), debate continues as to whether the borders are "ideal" or "real" and, in either case, how old in formulation. With the evidence that Solomon's administrative districts (1 Kings 4) would render the Joshua borders dysfunctional, it is likely that chap. 19 is a mixture of reality and ideality, with memory and resources both fragmentary.

3. Archaeology and Social World. Energy recently spent in debating the pertinence of archaeology for interpretation of Joshua (Wright *Joshua* AB, 74–80) is as nothing compared to the pace of exploration and excavation on both sides of the Jordan in the same period (Boling 1988). Here it will be better to reserve judgment about what archaeology can and cannot do, while describing what archaeologists have found that may be pertinent.

A 13th-century setting for the Exodus and career of Moses (toward the end of the century, better than early) is holding well. A recent attempt to lower the end of the MB (ca. 1500 B.C.E.) so as to accommodate a 15th-century date for Moses (Bimson 1981) encounters awesome head winds from experienced field archaeologists. At the same time the data that confound do not go away.

The site of Jericho (Tell es-Sultan), once a strongly fortified city with an urban tradition going back to a Pre-Pottery Neolithic era, appears to have been little, if anything, more than the residence of a local strongman at a defunct town site in the 14th century, with no surviving evidence of occupation in the 13th century. A variation on the theory that Jericho was scene of a "ritual conquest" combines evidence from archaeology and medical history (Hulse 1971), reading the story of Jericho as the ritual cursing of a disease-ridden oasis. If so, the unique treatment of Jericho as manifesting public health policy will make sense, as well as the execution of Achan and family together with contaminated objects in an effort at control of pestilential disease (Boling, *Joshua* AB, 214–15; 1983). There are indications that the "ban" (Heb *ḥerem*) improbably generalized to virtually genocidal proportions by the Deuteronomistic Historians, originated in such ad hoc degrees (Meyers 1978). For yet another possible explanation of the gap between narrative and strata at Jericho, see below.

The site of Ha-Ai, if identified with et-Tell (which also means "The Ruin"), had been a massive walled city in the EB but was virtually uninhabited throughout most of the 2d millennium, until a small unwalled village is found nestled within the remnants of defense walls already a thousand years old, early in Iron I. It has often been assumed therefore that while the battle of Jericho is mostly liturgical (Soggin, *Joshua* OTL, 83–88), the story of The Ruin is entirely etiological. Alternatively it has been argued that the name Ha-Ai is secondary, in a story that originally recounted the capture of nearby Bethel (Judg 1:22–26), which was destroyed and soon reoccupied, as known from excavations (*IB* 2: 583–84). Yet another proposal sees incoming Israelites finally retelling far older Conquest stories, from the expulsion of the Hyksos and earlier (Jericho and The Ruin), in stereotypical form, but with Joshua as military hero.

No such ready rationalizations are available to account for the shape and content of the Gibeon story, where LB evidence at the site of el-Jib is confined to tombs, and the town site, if occupied, was another unwalled village, like Ha-Ai, at the end of the 13th century, and a number of others in the vicinity.

It is with the diversion to Shechem (8:30–35) and the S sequel to the defense of Gibeon (chap. 10) and then Hazor in Galilee that the correlation of stories and stratigraphy improves. There was a late 14th-century destruction of Shechem, whether accidental or otherwise is, of course, not known from excavation. If that destruction of Shechem may be related to the tradition about Jacob's claim to the area by right of conquest (Gen 48:22, in contrast to the legal purchase of a burial plot, according to Josh 24:32), then it appears to have been followed by a generally peaceful period of nearly 200 years, until the third quarter of the 12th century, with a massive destruction sealing Abimelech's local reversion to monarchy at Shechem. Excavations reveal that it was at some time during this period that an altar and sacred area, without any nearby settlement, were flourishing on Mt. Ebal (Zertal 1985). See also EBAL, MOUNT.

A roll call of the S opposition is inconclusive. According to biblical tradition Jerusalem remained a small but strongly fortified Canaanite highland city until it was taken by David. Nothing from extensive excavations on the S spur of Jerusalem ("City of David") suggests otherwise.

Evidence from Hebron is minimal (because of restricted access for excavations of an area of continuous occupation to the present) and unpublished. Jarmuth, if located at Tell Yarmuth, had meager LB presence; it was a small hamlet or burial ground. Lachish was destroyed ca. 1160 B.C.E. Eglon, with Tell el-Hesi now ruled out, is unknown archaeologically; likewise Makkedah. Libnah, best identified with Tell Bornat, has yet to be extensively uncovered. Debir, if located at Tell Beit-Mirsim, was destroyed in the late 13th century. If identified with Khirbet Rabud, which now appears best on general topographical grounds, there is no evidence of destruction within the era.

The possible correlations between narrative claims and excavated strata thus appear minimal. On the other hand, the idioms "put to the sword" or "put under the ban" *(ḥerem)*, used formulaically in the material, may not mean total destruction, if the purpose was the elimination of royal opposition in order to take over habitable towns and if the *ḥerem* was originally an ad hoc decree regarding the taking of booty or protection against epidemic and the like.

Finally, to complete the roll call, if the destruction of Canaanite Hazor is correctly dated to the second quarter

of the 13th century, then the chronological range appears too broad for one commander's lifetime. Yet it is spacious enough to include many other sites, especially in the S hills, which suffered destruction (some of them more than once) in the last phase of the LB and beginning of the Iron I period. Excavations attest to an exceedingly turbulent scene up and down the Canaanite corridor throughout the period. Much of the turbulence seems, however, to have been avoided for the better part of 200 years by the population centering in Shechem. How many of the destruction levels were due to natural causes, how many reflect inter–city-state warfare, and the extent to which Joshua 2–12 represents either cause or response are now unanswered questions calling forth new approaches. Especially helpful is the recent escalation of surface surveys on both sides of the Jordan, when combined with results of controlled excavations and subjected to queries and investigative methods originally at home in the social sciences.

Archaeological surveys in recent years have shown that, in the same 200 years framed by destruction layers at Shechem, the hill country to the N of Shechem and to the S as far as the latitude of Hebron saw a blossoming of small unwalled settlements for the first time in history, with a parallel development in upper Galilee. Between Hebron and Shechem alone the number of villages in a 4200 km² area surveyed increased from 23 in LB to 114 in Iron I (Stager 1981). The settlements were occupied by families practicing a subsistence agricultural economy based on dry farming (Hopkins 1985). Development of the settlements required enormous investments of labor to construct the necessary agricultural terraces. The villagers were considerably poorer than the higher social strata that lived inside the great walled cities of the plains, but without any marks of distinctiveness in their material culture that are not subject to continuing intense debate. Some of these highland families were probably newcomers from N and E. Many were surely refugees or pioneers, retreating from the intercity warfare, subscription, taxation, and exploitative demands for agricultural surplus in the old city-state centers, much of which is vividly illustrated, for the 14th century, in the Amarna Letters. Still others of these farming families must represent an outward spread of population from the Shechem vale, where the settlement of new villages begins in the 14th century (Campbell 1968), when Labayu and sons clearly care little about Egyptian sovereignty and are accused of having given Shechem over to the *habiru*. The latter term (like biblical "Hebrew") is a general label for societal marginals and not a synonym for Israelite, although many early Israelites were, or had been, "Hebrews." This looks like a strong link between a destruction level, on the one hand, and Amarna and the Bible, on the other.

Data for the study of demographic patterns and urbanization on both sides of the Jordan are now massive. In a control sample of 77 excavated sites (Gonen 1984) the transition from MB to the first phase of the LB saw a reduction in number of towns by more than half (from 54 to 24). Town life picked up again in the 14th century, and by the 13th century the number of occupied sites in the sample was back to the MB levels (56 sites). When results of regional surface surveys were added to the picture, the disruption at the MB/LB transition in Cisjordan is even sharper; evidence for LB is only 37 percent of the total for MB. Furthermore, the LB settlements in the sample were greatly reduced in size and most often unwalled. There was an early shift of concentration to the coastal plain and important communication routes. The highlands suffered initially from a process of desertion. However, as the highlands were resettled throughout LB, the percentage of small (11 to 50 dunams) and medium-sized (51–100 dunams) settlements remained rather constant; but the number of tiny settlements (10 dunams or less) increased fourfold by the end of the LB. Finally, it appears that the total area occupied by the 13th-century sites was, nevertheless, only about 45 percent of the area for the MB II settlements.

Comparison with the E Jordan valley, always ideally suited for the most intensive agriculture, is instructive. In the N half of the valley alone (between the Yarmūk and the W Rajib), a recent survey recorded 106 sites, 52 of them new additions to the archaeological map (Ibrahim, Sauer, and Yassine 1976). There the reduction in number of sites from MB II (25 sites) to LB (13 sites) and the situation in Iron I (23 sites) are amazingly close to the Cisjordanian sample. Again, the earlier transition was far more disruptive than the later one, as 8 of the 13 LB sites continued into Iron I (Boling 1988).

The pattern on the Transjordanian plateau is different but not unrelated. Survey of 346 sites between the Yarmūk and the Zarqa (biblical Jabbok) produced evidence for MB II at 21 sites, LB at 23 sites, and Iron I at 77 sites (Mittman 1970). However, only 4 of the MB II sites continued into LB, while 19 of the LB sites continued into Iron I. Again, the earlier transition was far more turbulent.

In contrast to the picture previously drawn on the basis of N. Glueck's pioneering survey work, there is now abundant evidence for settled LB population in central Transjordan (from the Zarqa to the Mujib, biblical Arnon), especially in the upper bend of the Zarqa. However, the settled LB population, at about the same level as in MB II, is found in obviously new alignments at widely scattered sites throughout LB until a veritable explosion of new settlements occurs in Iron I (Boling 1988).

Survey on the "Moab" plateau (585 sites) between the two grand canyons (Mujib and Hasa, biblical Zered) shows a distribution of sedentary population in MB II, ca. 5.3 percent of all sites in the survey (Miller 1979a, 1979b; Mattingly 1983), approximating the situation in the N (6.1 percent of the 346 sites in the N Jordan survey). Here the major difference in MB II is a number of walled towns in the N but a total absence of such sites on the S plateau between EB and Iron I. In the N there developed much earlier a tradition of city-state polity, which is reflected in both the biblical and extrabiblical references. Most striking, however, is a sharp increase in the number of sites in "Moab" (up from 31 sites in MB II to 75 sites in LB), still unwalled. In other words while the density of settlements declined by half in the N Jordan valley and while population was regrouping throughout N Jordan, the percentage of LB settlements reflected in the surveys more than doubled on the S plateau (up from 5.3 percent for MB II "Moab," to 12.8 percent in LB) and nearly doubled that in the N. The territorial state of Moab, snugly situated be-

tween the two grand canyons, had thus emerged, with a much smaller state, Ammon, at the desert fringe lagging not far behind.

To summarize the picture on the E-W axis as currently reflected in archaeological evidence, we see widespread political chaos and social disintegration at the end of the MB period, the decades when Egypt was successful in expelling the Hyksos and in reclaiming the cities of Canaan and Transjordan for a native Egyptian dynasty. Initial decline of the few power centers in the Cisjordanian highlands was followed by gradual resettlement of the hill country from within and without the land. Refugees and/or dropouts from the old power centers of the plains and valleys moved into the empty highlands and onto the Transjordanian plateau, where there were few fortified towns S of the Yarmūk and none S of the Mujib. In both areas, W highlands and E plateau, they could practice a subsistence agriculture without also having to support an urban elite.

The other increment to the populations E and W came from the widespread collapse of the international peace. The initial desertion of the highlands and fragility of new LB alignments in N and central Transjordan made them also a happy hunting ground for other newcomers from the N and NE, such as the Amorite kingdoms of Sihon and Og, as well as from the S.

The biblical conquest of Transjordan came from the S, where the picture is still far from clear. Excavations in the heartland of "Edom" (at Umm el-Biyarah, Tawilan, and Buseirah) produced no evidence for a wide-ranging territorial state until well into Iron II, 8th to 6th centuries B.C.E. More recently, a survey of over 1000 sites on the S bank of the Wâdī el-Hasa and tributaries (thus only the N extremity of "Edom") found no definite MB pottery; and LB evidence was almost nonexistent. There appear to have been a series of small but permanent settlements along the S bank of the Wâdī el-Hasa by the early 12th century (MacDonald 1982, 1983a, 1983b, 1984), which now look like spillover from the burgeoning population on the "Moab" plateau just to the N. Thus the kings of Edom, who ruled a territorial state from Bosrah in the 8th century and later, may well have had lesser and local predecessors here and there, even contemporaries, each claiming locally the prerogatives of *mlk*, "king".

While the formation of a major territorial kingdom of Edom was long preceded by Moab's head start in the N, it also lagged behind a flourishing network of settlements to the S, in the coastal wadis of the N Hejaz from the end of the LB (Ingraham et al. 1981). This was the heartland of biblical Midian. The far-flung commercial reach of this culture is now well documented in the distribution of the so-called "Midianite" pottery, which emanates chiefly from two sites, Tayma and Qurayya; the latter is also the best candidate for the place name (Beth)-Yhwh in Egyptian topographical lists of Amenhotep (Gk Amenophis) III (1386–1349) and Rameses II (1279–1213; Kitchen 1982: 238–39).

There is therefore much to be said for the biblical story line, recounting "conquest" in Transjordan led by Moses, where especially Moab and Midianites pose the opposition, separately or together, in the region immediately N of the Arnon. If the stories in Numbers 21ff. are judged on source-critical grounds to be a late monarchic (or even postexilic) redaction, we may observe that another set of stories, with action centering in the same places, will be needed to comprehend the shifting demographic patterns, at the LB–Iron I transition, which are emerging with ever greater clarity (Boling 1988).

From another angle of vision, researches into modern *segmentary societies*, especially as correlated with lineage systems, are directly pertinent to study of Joshua and the tribal organization of ancient Israel (Wilson 1984; Frick 1985). In societies which display segmentary lineage systems, political organization is regularly based on genealogical reckoning and operative descent rules. As societal segments move from one place to another, experience expansion, or decline because of whatever circumstances, new alignments result and genealogy in time adjusts to affirm the newer arrangements, which will be widely accepted as the way it has always been. That ancient Israel in the pre-state period was in many respects comparable to such lineage-based societies is a hunch now energetically pursued. When the lineage-based society develops into a state, the "official" genealogy will prefer the lineal form, while various societal segments will continue to tell their own stories. As a result, we have, finally, the complementary perspectives within the finished book of Joshua. The final edition, we have suggested, was designed to be supportive of life in the postmonarchic situation. It draws deeply on traditionary roots going back not only to the post-Mosaic followers of Joshua, but all the way to a pre-Mosaic "Israel." That early "prehistory" is equally important for critical interpretation of Joshua.

4. Elohistic Israel and Yahwistic Israel. The clearest sources for history of the normative twelve-tribe system are the lengthy poems incorporated in Genesis–Judges, five in particular, to which may be applied the principles of sequence dating originally at home in archaeology. The five major units comprising the corpus may be understood on stylistic and historico-linguistic grounds as premonarchic in all essentials. The poems may be arranged in chronological sequence, either in order of composition or in order of content. An earlier date of composition is no guarantee of higher historicity; a later composition may in fact reflect accurately a considerably earlier situation. The proposed sequence (Freedman 1979, 1980) followed in Table 1 has turned out to be remarkably in phase with the shifting demographic pattern outlined above.

Table 1: Early Hebrew Poems

Poem	Content	Composition
Genesis 49	14th–13th	11th
Exodus 15	13th–12th	12th
Numbers 23–24	12th	11th
Deuteronomy 33	12th	11th
Judges 5	12th	12th

In the Testaments of Jacob (Genesis 49), twelve tribes are named in the clearest compact witness to earliest Israel. Several of the testaments are worth noting in particular. Though Reuben is "firstborn" (on which side of the Jordan Reuben lives is not clear), Judah has the most exalted status

(vv 9–12), with no compelling reason to regard that status as anachronistic. Joseph is one tribe which may have ranged on both sides of the Jordan (as reflected in the later prose narratives of the patriarchs), N and S of the Jabbok, in a period prior to formation of the Amorite kingdoms (which in turn probably postdates destruction of Ugarit; ca. 1200) and long before the Yahwist organization under Eleazar and Joshua redefined old "tribal" areas. Simeon and Levi are denounced for their violence (vv 5–7) in terms which indicate that they are being evicted from the Israel organization. What is said of Gad, who apart from Joseph may alone represent a Transjordanian constituency in Genesis 49, fits very well with the demographic patterns and the suggestion that the Amorite kingdoms were recent newcomers to the region flanking the Jabbok. The defeat of Sihon, when it came, would be greatly facilitated by Israelites already, and for a long time, in residence there as part of a variegated sedentary population. Thus we may understand King Mesha's 9th-century claim that "the people of Gad had lived *mʿlm*" (from ancient times) in the land of Moab's recent expansion, N of the Arnon. And if Jephthah's career falls in the 11th century, his argument that Israel had lived alongside Ammonite territory for "three hundred years" would be an approximately accurate round number. Genesis 49 thus describes pre-Yahwistic Israel in a poem where other divine names are preferred: El, Shaddai, and probably ʿAli. This earliest Israel had its center for some time in an El-berit sanctuary at Shechem in the early post-Amarna period. Earliest Israel was crushed by Merneptah roughly a century later, so decisively that in the second major poem of the corpus the name Israel does not occur.

In the Song of the Sea (Exodus 15), there is no hint of a lineage system, no connection with patriarchal traditions or promises about the land of Canaan. The horizon of the poem is limited to the S wilderness, traditional home of Yahweh (see above, on the LB settlements in N Hejaz). The Song of the Sea links the tradition of the Exodus from Egypt with the crossing of the sea and march through the wilderness to the sacred mountain, holy habitation of Yahweh, somewhere in Sinai. The four peoples who are struck dumb with terror at Yahweh's redemptive activity (Philistia, Edom, Moab, Canaan) can only have coexisted in their traditionally assigned territories during the 12th century B.C.E.

The Oracles of Balaam in Numbers 23–24 concern "Israel" in Transjordan, but there is no tribal roster. The poet's concern does not yet include Canaan. Moabite "occupation forces" N of the Arnon are confronted, we suggest, with elements of Yahwistic Israel and Elohistic Israel now making common cause: tent-dwelling newcomers (more to the S and E?) and village-farmer sympathizers (surely more on the N = Gad). We must, apparently, understand that the dismantling of Sihon's kingdom had only cleared the way for an early attempt at Moabite expansion N of the Arnon, in a region yet to be consolidated as "Reuben" (Boling 1988: 30–35, 60–61). Such a reading helps to account for the collaboration of the "elders of Midian" (Num 22:7) on Moab's side in the affair. It is likely that Midianite commercial interests were by this time counting on Moabite "protection" against the mounting resistance of an expanding Yahwist movement, with nascent disruption of the caravan trade, soon to be celebrated at length in the Song of Deborah, from the highlands of Cisjordan (Chaney 1983). That Midianites were now to be found in considerable strength N of the Arnon is clear from the story of Beth-peor (Numbers 25).

In the Testaments of Moses (Deuteronomy 33) the tribal roster reappears. Here Judah has fallen on hard times (v 7). The eclipse of Judah may be connected with the Egyptian ruler Merneptah's campaign (ca. 1235 B.C.), if we are not already into the Philistine period. Reuben, wherever situated, seems to be in equally dire straits (v 6). Simeon appears to have withdrawn from central Cisjordan to the N Negeb (Josh 19:1–9) after its ouster in Genesis 49. If so, it has now gone under, passed over in silence; it will only retain a place in idealized prose genealogies. Simeon's slot is here filled by division of a greatly expanded Joseph, who gets the most expansive treatment (vv 13–17). Levi appears to have undergone a transformation. Evicted for its violence in Genesis 49, Levi is now the zealous keeper of the oracle and instructor in how to keep Yahweh's covenant. If the name refers to elements of a single tribe (which is easier to comprehend than the disappearance of a "secular" Levi to be replaced by a "sacral" tribe of the same name), then it is reasonable to think that some of the levitical families made their way to Egypt, after banishment in Genesis 49, there to undergo religious conversion, thanks to Moses, and emerge as a "palace guard" in the newly constituted alternative kingdom. The revival of Levi led at last to rival priestly houses, deeply entrenched in both the N and S kingdoms after Solomon, as cultivators of the prose tradition.

Finally, in the Song of Deborah (Judges 5), the organization "Israel" appears to consist of ten territorially based tribes. Here again it is Judah that is most conspicuous for its absence, and we are deep into the Philistine period. Judah has joined Simeon; but unlike Simeon, Judah will revive to engulf the territory where Simeon had sought to relocate (Josh 15:20–63). Two Transjordanian constituencies are faulted for not answering the call to arms: Gilead (= E Manasseh) and Reuben. That there is no mention of Gad suggests that Moab has once again expanded N of the Arnon (cf. the story of Ehud vs. Eglon in Judg 3:12–30), so that Gad's earlier residence there is receding into the "ancient times" to which Mesha refers in the 9th century B.C.E. Lack of any mention or allusion to Levi in Judges 5 has always been a major crux. But the omission is not very surprising in a roll call of *territorially-based* tribes. If Deuteronomy 33 represents an earlier situation, with Levi already elevated as teacher and oracle keeper for "Yahwist Israel" on the move, the levitical families are now already dispersed. Levi comes in for neither praise nor blame in Judges 5, we may suspect, because its members are functioning, in effect, as muster officers in every other tribe on both sides of the Jordan and with very mixed success.

The transition from Elohistic Israel to Yahwistic Israel had far-reaching political implications (Mendenhall 1962, 1973) working for societal transformation (Gottwald 1979): governance by God and the rule of ethic. Effective first in Transjordan, the reform movement centered for a period at Shechem (Josh 8:30–35), which because of its revolutionary implications was at least played down in circles close to the Jerusalem throne (in favor of Shiloh).

There it was emphasized that Joshua's covenanting came at the end, after conquest and land division were complete (chap. 24).

5. Levitical Sponsorship: Dtn, Dtr 1, Dtr 2. While the pioneering study of the "Deuteronomistic" work regarded it as a product of the Exile or later (Noth *ÜgS*), interpretation which regards the work as merely etiology of national destruction is inadequate. In the canonical book of Joshua (and throughout the Former Prophets) we recognize signs of at least two major "editions," both of them making use of older stories and both of them shaped by a rediscovered book of Mosaic Torah. We have adopted the symbols *Dtr 1, Dtr 2,* and *Dtn* as convenient shorthand.

Dtr 1 stands for the major portion of the books Joshua–2 Kings. It represents a late preexilic enterprise, from the time of the reforming king Josiah. The work was clearly designed to be supportive of life under a reformed Davidic monarchy, and the figure of Joshua is presented as an ideal for the Jerusalem king in matters military, legitimating Josiah's reconquest of Cisjordan in a period of Assyrian weakness. While the battles in Joshua 6–11 are presented as examples of properly holy warfare, they are also the last such prior to Josiah. For Judges 2 begins with announcement that Yahweh will no longer participate in expansionist warfare against Canaanites.

Dtr 2 stands for a subsequent edition, addressed to a drastically altered situation. The bulk of Dtr 2 may be exilic, but it need be only post-Josianic to make sense. There is thus an unresolved tension running throughout the Dtr corpus.

Dtn stands for the bulk of Deut 4:44–28:68, an old Book of the Law of Moses which so effectively accounted for demise of the N kingdom that it became in Josiah's day, with a new introduction, theological preface to the entire story from Moses to Mosaic revival in the late 7th century B.C.E. Without the explicit regulation of kingship in Deut 17:14–20, Dtn is neither promonarchic nor antimonarchic. It is simply amonarchic and stems from no "royal" sanctuary. The best guess is that Dtn comes from certain levitical circles claiming premonarchic legitimacy, concentrated mostly in the N originally and calling for a grass-roots renewal of covenant on the Sinai/Moab/Shechem pattern. It is a reasonable working hypothesis that the tradition is rooted in the experience of some levitical families left stranded in Egypt, after events reflected in the story of Genesis 34 and the poetry of Gen 49:5–7, while other levitical families acquired legitimacy with the Yahwist takeover and reform (to various degrees) at sanctuaries of the older Israelite lineage system. Sociologically the Levites in the lineage-based society may be understood as a quasi-guild structure, a professional "caste," which one might enter by choice or appointment, not alone by heredity (Polk 1979; Gottwald 1979). Dispersal of the levitical carriers of militant Yahwism throughout the territory of the other "tribes" was institutionalized in the system of levitical towns (Joshua 21). This probably began, indeed, in the premonarchic period; for subsequent levitical history was very different in the N and S kingdoms; and there is nowhere any hint of a functioning system of levitical towns anywhere in the books of Samuel and Kings, except most indirectly.

The alienation of many N Levites must have begun as early as Solomon's reign, with exploitative fiscal policies draining the N, to the economic and military advantage of the S. The list of towns in Joshua 21 reflects a series of monarchic adaptations. The Gershonites (21:27–33) were consigned en masse to the distant N. The name Gershon/m—first son of Levi in the standard genealogy of Exod 6:16–19—also appears as a patronymic of Moses' grandson Jonathan, founder of the priesthood at Dan (Judg 18:30). It is likely that Gershon/m was the name of a major division of Levi alternatively called "Mushites" in the fragmentary genealogy of Num 26:58a (Cross *CMHE,* 197–98). The Gershonites/Mushites, claiming Moses as their priestly progenitor, functioned in N towns, a number of which first became "Israelite," it appears, thanks to David's conquests. After banishment of the Mushite priest Abiathar (originally of Shiloh) from Jerusalem early in Solomon's reign, priesthood in Jerusalem became the exclusive prerogative of the Zadokites, whose Aaronite legitimacy was rooted in David's early power base at Hebron (Cross *CMHE,* 207–15).

It is descendants of those N Levites at premonarchic sanctuaries (predominantly Mushite) that are the best candidates for producers of nuclear Dtn. They were spurred on by such actions as Solomon's sale of the Cabul district, which contained three or four "Gershonite" towns (Abdon, Rehob, Mishal, and possibly Helkath), to Hiram of Tyre (Halpern 1974: 523). Nor did the N administration do anything to heal the breach, which was doubtless widened by early relocation of the N capital away from Shechem and by Jeroboam's priestly appointments at Bethel (originally Aaronite; Judg 20:26–28) and at the high places (non-levitical; 1 Kgs 12:31). The Chronicler reports that Rehoboam was able for three years to exploit a newfound support among the victims of Jeroboam's priestly assignments (2 Chr 11:13–14, 17). From such a milieu, out and away from the great royal sanctuaries, Dtn took documentary shape (and likely also the specific contents of the town lists in Joshua 21) in relation to the late 8th-century reform of Hezekiah, after the fall of the N kingdom (2 Kings 18 = 2 Chronicles 29). There must have been a major flight from the N after the fall of Samaria (721 B.C.E.), when Jerusalem saw enormous expansion, exploding onto the W ridge. Thus it is not surprising to find evidence of rival priestly houses both drawing upon Dtn, with one of them closer to the Jerusalem throne and dominating formation of the literature until the untimely death of Josiah.

Further evidence of the unresolved tension is the use of a distinctive formula in the numerous references to levitical personnel. There are "the priests the Levites" (Deut 18:1); and there is "the Levite" or "all the tribe of Levi" (Deut 12:12, 18; 16:11, 14; 26:11, 13). "The priests the Levites" are the most prestigious; in Joshua they carry and guard the ark of Yahweh's covenant (Josh 3:3; 8:33). But when Deuteronomy refers to "the Levite" or "all the tribe of Levi" (persons in need of special benevolence, along with other unlanded persons: aliens, widows, orphans), context generally indicates client priests in much larger numbers. It was for them, as the teachers of Israel, that provisions had been made in the institution of levitical towns. Thus Dtn was careful to stipulate that every Levite shall have the same prerogatives of priesthood at the most prestigious of sanctuaries, the one especially distinguished

by Yahweh's choice (Deut 18:6). In Deut 18:1, where "the priests the Levites" is immediately explained appositionally (but without a conjunction) as "all the tribe of Levi," we may thus have a gloss claiming for all levitical males the same prestigious status of "the priests the Levites," status stemming from the very early period.

In summary, we may recognize in Dtr 1 the penultimate product of a long experience and process of tradition formation in the land, telling the story from Moses to Josiah (2 Kgs 22–23), and from a predominantly S Aaronite perspective. Joshua is presented as military commander par excellence and as such a model for Jerusalem kings, who may use the power of the throne to implement the teaching of Moses. But the effort died with Josiah. We may recognize in Dtr 2 the contributions of other levitical families, fleeing S after 721 B.C.E., with their own "Mushite" and "N Aaronite" memories of the way it had been and with Dtn's promise of full priestly status at "the place which Yahweh shall choose," only to be outmaneuvered there (2 Kgs 23:9, which puts it in the best possible light: it was their own fault). The book of Joshua ends therefore on a different note; for Dtr 2 supplies the only cracks discernible in the portrait of Joshua, displays an interest in an Israel much more extensive than Josiah's Cisjordan kingdom, recalls the important role of N priesthoods in the premonarchic decision making, and in general commends a way of looking at the past that will be positively supportive of life in Exile. For Israel the postmonarchic "congregation" is direct descendant of Israel the premonarchic "assembly." Joshua's farewell address unmistakably anticipates exile, but the two chapters framing it are entirely upbeat, making the point that in order to maintain identity as Israel it will be better to keep talking (chap. 22) and renewing promises to God and to one another (chap. 24).

The structure of the book of Joshua in final form is integrally related to the book of Judges. This is evident in Table 2. See JUDGES, BOOK OF. In this arrangement pericopes represented by the first column (the "Josianic" edition) make virtually continuous reading, with rarely any noticeable gaps. Not so the second column, which in a variety of ways annotates and supplements the first edition, with scant indication of overwriting it. The result is a sobering reminder of how impossible it is for one historian to know all of the truth and how difficult it is indeed to tell all the truth that one knows.

Table 2: Book of Joshua

	Dtr 1		*Dtr 2*
	I. Mobilization and Entrance		
	Yahweh, Joshua, and Israel	1:1–11	
		1:13–18	E Jordanian tribes
		2:1–24	Rehab's house
	Opening the river	3:1–16	
		3:17–4:8	Twelve stones
		(4:9)	Twelve other (LXX) stones
	Crossing the river	4:10–11	
		4:12–13	E Jordanian tribes
	Closing the river	4:19–5:12	Cultic encampment
	II. Warfare		
	The commander	5:13–15	
	Intervention I: Jericho	6:1–21	
		6:22–25	The Rahab splice
	The curse on Jericho	6:26–27	
	Defeat at The Ruin	7:1–26	
	Second attack on The Ruin	8:1–2	
		8:3–11	Judges 20 prefigured: part I
	Intervention II: The Ruin	8:12–19	
		8:20–25	Judges 20 prefigured: part II
	The sign	8:26–29	
		8:30–35	Shechem: chronological corrective
	Gibeon treaty	9:1–15	
		9:16–27	Judges 21 prefigured
	Intervention III: Keeping faith	10:1–11	
		10:12–15	Sun and Moon (cf. Joshua at The Ruin)
	Sequel	10:16–43	
	A N coalition	11:1–15	
	Concluding summary	11:16–23	
	III. Inheritance of Land		
SHECHEM phase		12:1–21	Former lords
		13:1–23	Transjordanian flashback
		14:1–15	Special introduction to Judah
	Judah and Ephraim	15:1–16:10	
	Manasseh, E. and W.	17:1–2	
		17:3–6	Daughters of Zelophehad
	W Manasseh	17:7–13	
	Joshua as judge	17:14–18	
SHILOH phase	Seven more estates	18:1–19:48	
	Joshua's estate	19:49–50	
		19:51	Conclusion to Part III
	IV. Two Key Institutions		
		20:1–9	Asylum towns
		21:1–42	Levitical towns
	Conclusion to Parts I–III	21:43–45	
	V. How to Avoid Civil War		
		22:1–34	Phinehas ben Eleazar
		23:1–16	Final warning
	Shechem covenant	24:1–28

ROBERT G. BOLING

JOSHUA, PSALMS OF (*4Q378–379*). Two highly fragmentary manuscripts from Qumran Cave 4 (*4Q378* and *4Q379*) contain an otherwise unknown work which has come to be known as the *Psalms of Joshua*. The text had a narrative framework that followed the outline of events in the biblical book of Joshua. The death of Moses, the succession of Joshua, the crossing of the Jordan, and the destruction of Jericho are all referred to. In contrast to the canonical Joshua, however, much of the material preserved in the *Psalms of Joshua* consists of admonitory speeches, prayers, songs, and curses. The style is strongly biblicizing, with occasional quotations from the biblical text (esp. Deuteronomy and Joshua). Where identifiable, the biblical text type is Septuagintal.

It is unlikely that the document was composed by the Qumran community. Neither the content nor the diction shows any affinity with the distinctive theology or terminology of Qumran sectarian writings (e.g., the *Rule of the Community* or the *Thanksgiving Hymns*). The *Psalms of Joshua* uses divine names avoided in Qumran compositions *(yhwh, ʾĕlōhîm, ʾĕlôah)* and does not use the term favored at Qumran *(ʾēl)*. Moreover, the *Psalms of Joshua* is cited as an authoritative text in a Qumran composition *(4QTestimonia)*. The only clue to a more specific provenance is the reference to the date of the crossing of the Jordan that identifies it as a jubilee year. The same calculation is implied by *Jub.* 50:4.

The date of composition is extremely difficult to fix. An expanded form of the curse of Josh 6:26 on the one who rebuilds Jericho may contain a historical allusion to the activity of the Hasmonean ruler Simon (reigned 142–134 B.C.E.), but the case is not conclusive. The expanded curse is quoted in the *Testimonia*. That text consists of a series of four quotations. The first three are from the Pentateuch and were apparently understood as prophecies of an eschatological prophet, a royal messiah, and a priestly messiah. The fourth is the curse from the *Psalms of Joshua*, which was apparently also given eschatological significance.

CAROL A. NEWSOM

JOSIAH (PERSON) [Heb *yōʾšiyyāh(û)*]. The root of the name is probably *ʾwš*, "to give" (Gordon *UT*, 354a, no. 117); compare also *yōʾwšiyyāhû* (Jer 27:1), Joash, and *yāʾûš* of the Lachish Letters (from *yāhûyāʾûš* or *ʾelyāʾûš*, "Yahweh/God shall grant" [Gibson *TSSI* 1: 37]), and Ug *ʾušn*, "gift". The root may, however, be *yšy*, "Yahweh brings forth" (Bauer 1930: 77), or Arabic *ʾasā*, "to heal" (Noth *IPN*, 212; 1956: 326).

1. King of Judah ca. 640–609 B.C.E.; son and successor of Amon. Josiah after his father's murder was made king by the "people of the land" (2 Kgs 21:24; 2 Chr 33:25), designating especially the Judean landowners enjoying full citizen rights (*THAT* 2: 299–300). He came to the throne at the age of eight and reigned for 31 years (2 Kgs 22:1; 2 Chr 34:1). His mother was Jedidah, daughter of Adaiah of Bozkath (cf. Josh 15:39).

a. Josiah's Reform in the Sources. The early years of Josiah's reign are presented in different ways by the sources. Chronicles records that in the 8th year of his reign (ca. 632 B.C.E.) Josiah began to seek the God of David his father (2 Chr 34:3a). This indicates an "inner attitude of loyalty towards God" (Williamson *Chronicles* NCBC, 95). In the 12th year of his reign (628/627 B.C.E.), he began to purge Judah and Jerusalem of the high places with their attendant cult objects (vv 3b–5) and then extended his efforts to Manasseh, Ephraim, and Simeon, as far as Naphtali (vv 6–7). In the 18th year of his reign (622/621 B.C.E.), after the finding of the Book of the Law in the temple, he carried out a great reform program (34:8–35:19).

But the author of Kings mentions only the reform in the 18th year of Josiah (2 Kgs 22:3), though this too extended beyond the borders of Judah and included the "cities of Samaria" (23:19), that is, the territory of the former N kingdom.

Another difference between the biblical sources concerns the reform of the cult. According to 2 Kings 23 Josiah removed both the Canaanite cult and the foreign emblems of worship. According to Chronicles only the Canaanite cult was removed. Manasseh had already purged the foreign idols (2 Chr 33:15). Chronicles' picture in 34:3b–7 is, however, essentially dependent on 2 Kings 23 (Williamson *Chronicles,* 397–99).

b. Civil War in Assyria and the Reform. For Chronicles, Josiah's reform begin in 628/627 B.C.E., coinciding with the beginning of civil war in Assyria (Cross and Freedman 1953: 56–58; Cazelles 1981: 25, n. 17). According to the Babylonian Chronicle (Wiseman 1956), Sin-shar-ishkun and Sin-shum-lishir revolted against Assur-etel-ilani in 627 B.C.E. By 626 Nabopolassar, king of the Babylonian marshland, had joined the war. In the same year he and Sin-shar-ishkun, when Assur-etel-ilani's army posed a serious threat to them both, appear to have agreed to recognize each other as kings of Babylon and Assyria respectively (Reade 1970: 4). These events allowed Josiah gradually to assert his independence and extend the reform into the former territory of the kingdom of Israel. Political objectives influenced the move into the N provinces (Nelson 1983: 183–84). Both Egypt and Judah wished to avoid a concentration of power in Asia and consequently supported the weaker party, Assyria. It is conceivable that Josiah remained a nominal vassal of Assyria right up to the end. But the call to reform was primarily religious, being voiced above all by those responsible for the law book (McKay 1973: 43).

c. The Law Book and the Reform. The account in Kings indeed considers the reform entirely a consequence of the law book's discovery; and it may be that Chronicles, if it is not drawing on a separate tradition (Cross and Freedman 1953: 57), prefers to spread out the reform in order to illustrate the theme of righteousness rewarded (Williamson *Chronicles,* 401–2). The piety of Josiah is shown earlier than in Kings; and the repairs to the temple, which in Kings were the occasion for the finding of the law book, now become an integral part of the reform.

The law book itself functions as a reward for Josiah's faithfulness as well as an encouragement to further obedience. In addition, because Josiah responds to the book's demands, he is told by the prophetess Huldah that he will not witness the destruction of Jerusalem but will die "in peace" (2 Chr 34:28), perhaps with the sense that the state will still be intact (Gray *1–2 Kings* OTL, 727).

d. Elements in the Reform. McKay (1973: 28–29) points out that Kings distinguishes three main aspects in Josiah's reform: the purge of the temple and its precincts, the destruction of the high places in Jerusalem and Judah, and the desecration of the sanctuaries in the old N kingdom (2 Kgs 23:4–20, 24). Chronicles provides a similar structure, but the purge of the temple is ascribed to Manasseh (2 Chr 33:15–16)—a notice which is quite possibly historical but probably marks a very limited action (Williamson *Chronicles,* 394–95). The reform may well have begun before the discovery of the law book, though this early stage was not confined to removing foreign cults (McKay 1973: 28–44) and the waning of Assyrian influence will have been a contributory factor (Cross and Freedman 1953; Rose 1977: 52, n. 15; Mayes 1978); but the Chronicler's account does not prove that its author has preserved an independent record of it (Williamson *Chronicles,* 398).

The territorial extent of Josiah's reform in the former N kingdom has been questioned (Rose 1977: 61, n. 49; Nelson 1981: 537–38), but the Meṣad Ḥashavyahu (Yabneh-Yam) inscriptions seem to show that N Philistia was under Josiah's control (Naveh 1960; Christensen 1984: 678), so that a substantial advance into the N territory would appear to have been feasible. Josiah and Pharaoh Psamtik I (ca. 664–609 B.C.E.) were probably allies, and Egypt will have been able to use the coastal route for its military operations in the N (Cazelles 1981: 31; Nelson 1983: 183–89).

e. The Finding of the Law Book. The law book which influenced Josiah's reform was found in the temple according to the account in 2 Kings 22, but when and by whom it was composed remain obscure. The narrative of repairs to the temple, which forms the context for the discovery of the law book, strongly resembles the story of King Joash's temple restoration in 2 Kings 12 and is therefore sometimes judged to be an invention of a Deuteronomistic Historian (Dietrich 1977: 18–22; Mayes *Deuteronomy* NCBC, 90–91). The account of the discovery of the law book has also been thought unhistorical (Mayes *Deuteronomy,* 85–103), even a "discovery legend" *(Auffindungslegende)* with the aim of legitimating the reform (Diebner and Nauerth 1984). While one may accept Deuteronomistic influence on the portrayal of these matters, to regard their substance as fiction seems to allow the historian a greater measure of freedom in respect of his sources than he is likely to have enjoyed (*NDH,* 84–88). It is preferable to follow the common opinion that the document existed and forms at least part of our book of Deuteronomy (Lundbom 1976; Dietrich 1977; Scharbert 1981: 45, n. 21).

f. Josiah in the Deuteronomistic History. Josiah plays an important role in the Deuteronomistic History. When Jeroboam I established a countercultus to Jerusalem in Bethel and Dan, his great sin (1 Kgs 12:26–33), an unnamed prophet foretold Josiah's destruction of Bethel (13:2). Josiah alone of the kings, not excepting David, escaped all criticism (2 Kgs 22:2) and gave his full attention to fulfilling the law of Moses (23:25a; see Cross *CMHE,*

283). The cultus was centralized according to the ancient law of the sanctuary; no doubt this move was influenced at least in part by a desire to possess the dues going to the Levites who controlled the country sanctuaries (Claburn 1973) and to ensure that royal control of all public worship, which had existed since Sennacherib left Hezekiah little more than Jerusalem, should continue (Levin 1984: 352).

g. The Passover. The climax of the reform was the celebration of the Passover (2 Kgs 23:21–23; 2 Chr 35:1–19). The narrative in Kings has been judged to be the work of a postexilic redactor (Levin 1984: 353–54, 371), but the Passover may have been removed from the family circle and centralized at the temple as a Yahwistic response to the child sacrifice practiced in the vicinity (Delcor 1982). Josiah's work for the true God reaches a climax in covenant renewal (Nelson 1981: 536). 2 Chronicles 35 offers a more detailed description of the Passover feast (vv 1–19) with emphasis on the role of the priests, Levites, and singers.

h. The Fall of the Assyrian Empire. Outside events do not appear in the biblical record until 609 B.C.E., but the Assyrian kings' grip on their own empire was growing steadily weaker (Garelli and Nikiprowetzky 1974: 125–28). In 623 Assur-etel-ilani died at Nippur while besieging Sin-shar-ishkun, who then marched on Nineveh and mounted the Assyrian throne. Meanwhile Cyaxares, a Mede who had succeeded in imposing his authority over Scythian and Persian tribes, proceeded to attack the E Assyrian provinces. By 616 Nabopolassar controlled all Babylonia. In 614 Assur fell to Cyaxares, and in 612 the Medes and Babylonians captured Nineveh, and the last Assyrian king, Assur-uballit II, withdrew to Haran. Meanwhile Egypt had been trying to help Assyria since at least 616—the Babylonian Chronicle features a gap between 623 and 616—when Nabopolassar encountered the army of Psamtik I (ca. 664–609 B.C.E.) on the Euphrates. Nevertheless, Nabopolassar captured Haran in 610 and in roughly the same year Psamtik I died.

i. Josiah's Death. The new pharaoh, Neco II (ca. 609–594 B.C.E.), continuing his father's policy, quickly marched N to help the Assyrians. At Megiddo he killed Josiah, whose body was then taken to Jerusalem for burial (2 Kgs 23:29–30). Chronicles provides a reason for his early and violent death by stating that he went to fight Neco, disobeying the word of God spoken by the pharaoh, "I am not coming against you this day, but against the house with which I am at war; and God has commanded me to make haste. Cease opposing God, who is with me, lest he destroy you" (2 Chr 35:21). Josiah was mortally wounded in the ensuing battle, but died in Jerusalem, and was mourned by Jerusalem and Judah (vv 20–24). This account may, however, depend on a revised and expanded form of that in Kings (Williamson 1982, 1987), or it may represent the Chronicler's own reworking of Kings (Begg 1987).

It is generally thought (e.g., Malamat 1973) that Josiah died trying to stop Neco, though he had apparently not interfered in 616 or 610. More attractive is the view (Nelson 1983: 188) that Josiah went out from Megiddo, a Judean fortress, as was Meṣad Ḥashavyahu much farther S, to welcome his ally Neco, intending to open the pass for the Egyptian forces. But Neco wanted the strategically placed Megiddo, which controlled his communications with Egypt, for himself. Unwilling to allow an ally who might change sides the opportunity of blocking his retreat before a victorious army, he killed Josiah by treachery, putting into Megiddo an Egyptian garrison. Judah will have been demoralized and unable to make an effective response.

j. Jeremiah on Josiah. For the Deuteronomistic Historian, Josiah was an outstanding king (2 Kgs 23:25), perhaps even Judah's most perfect ruler (Nelson 1981: 540). Yet Jeremiah took little notice of him. It has been argued by supporters of a low chronology that Jeremiah's prophetic career began only after the death of Josiah (Whitley 1968; Holladay 1980, 1981, 1983; Levin 1981); but although caution is necessary in linking Jeremiah's oracles with what we know of the sequence of historical events (Ackroyd 1984: 50), the evidence adduced for a low chronology is not conclusive (Scharbert 1981: 41, 46).

Jeremiah compares Josiah favorably with Jehoiakim: "Did not your father eat and drink and do justice and righteousness" (Jer 22:15). The precise force of the expression "eat and drink" is obscure, but it may simply mean that, although he kept a royal court and enjoyed life, he still practiced justice (Smend 1977: 452–54).

Josiah's motives for cultic reform were not purely religious, and it is likely that even in his lifetime its limited effect on the people was perceptible. He met his death in a political dispute. This Jeremiah saw, and his cool appraisal of Josiah furnishes a corrective to the enthusiasm of the Deuteronomistic Historian.

2. Son of Zephaniah, to whose house three Jews from the Exile bring gifts (Zech 6:10). It is not certain whether or not he should be identified with the son of Zephaniah in v 14.

ROBERT ALTHANN

JOSIPHIAH (PERSON) [Heb *yôsipyāh*]. The father of one of the family heads—Shelomith—who, with 160 males, returned with Ezra from exile in Babylon during the reign of the Persian king Artaxerxes (Ezra 8:10; 1 Esdr 8:36). His inclusion among the sons of Bani is supplied by the LXX (but not Codex Vaticanus) of Ezra and by 1 Esdras. His theophoric name, with an imperfect form of Heb *ysp* followed by the contracted proper name of the deity, gives expression, according to Noth (*IPN,* 212), to the wish for additional children—"may Yahweh add to (those children already born)."

RODNEY H. SHEARER

JOSIPPON, BOOK OF. A version of the writings of Flavius JOSEPHUS dating to the medieval period and written in a superb biblical Hebrew style. The book begins with the list of Japheth's descendants (Gen 10:2–5), which the author identifies with existing nations of his own day. A fabulous history of ancient Italy follows (based on unhistorical sources from the early Middle Ages). Then the book proceeds to its real aim: the presentation of the history of the Second Temple period, ending with the fall of Masada.

A. Introduction

For the past 500 years this book has been available in two different forms, each reflected in a different printed edition. The older of these editions (the editio princeps), based on a condensed and carelessly restyled form of the original, was published in Mantua around 1480 and has had little influence on modern scholarship. The second printed edition, based on an expanded and rewritten form of the original, was published in Constantinople in 1510 and became the source of all subsequent printings (most recently reedited by H. Huminer [1971]). Until recently the Constantinople edition was the form of Josippon most familiar to both scholars and other interested readers, and it is properly regarded as a pseudepigraphon (a writing falsely attributed to Josephus).

However, a third critical edition of Josippon has recently been prepared (Flusser 1978–80), based not on these printed editions but rather on the original manuscript evidence itself; and it now appears that originally the book of Josippon was not intended to be a pseudepigraphon. Consequently, we are now in a position to make some confident claims about the original form and to understand how the two printed editions came to depart from it.

B. The Original Form

1. Authorship. Among the extant mss of Josippon are three based on a manuscript copied by Rabbi Gershom ben-Judah (ca. A.D. 960–1028), who probably made his copy to use as a textbook on Second Temple history. One of these three mss preserves the original author's note that he wrote and translated "from the book of Joseph (i.e., Josephus) ben-Gurion the priest in the year 885 from the destruction." Since it was customary then to reckon the destruction of the temple from the year A.D. 68, we can conclude that the book was written in A.D. 953. This accords well with the up-to-date description of Japheth's descendants that begins the book. There, the author states that the Hungarians were already settled along the river Danube, a situation that did not exist prior to A.D. 895–899. Similarly, he refers to the Muslim conquest of Tarsus (in Asia Minor) and to the ongoing Muslim-Byzantine conflict, yet he is still unaware of the Byzantine recapture of Tarsus in 965. This is exactly the perspective of an author writing in the middle of the 10th century.

The author was self-conscious of his work as a historian, and states: "I have collected stories from the book of Joseph ben-Gurion and from the books of other authors who wrote down the deeds of our ancestors, and I compiled them in one scroll." The name of this author, however, did not appear on the work itself and was soon forgotten; consequently, the book became known simply as the "Book of Joseph ben-Gurion" or, in Latin, "Josephus Gorionides" (a confused reference to Flavius Josephus; see

B.2 below). Since Josephus was quoted therein as the main source for the book, it erroneously came to be ascribed to this 1st-century writer himself (a mistake that was deliberately compounded by the person who prepared the version on which the Constantinople edition was based; see C below). Thus the book also came to be known generally as *Sefer Josippon* ("Josippon" being the Judeo-Greek form for Josephus), although the name Josippon itself does not appear in the original texts of the book. The fact that the book was known by this Judeo-Greek title indicates that its first readers were Byzantine Jews.

The anonymous author of this medieval book apparently lived in S Italy, which at that time was a center of Jewish culture and of Hebrew literary activity. This S Italian provenance is reflected not only by some Italian words which crept into the text, but also by the author's familiarity with the region, including his firsthand knowledge of the environs of Naples, the town in which he presumably lived and wrote.

2. Sources. Although the book was written in biblical Hebrew, the anonymous author was far better versed in Latin literature than in postbiblical Hebrew rabbinic sources. And even though S Italy at the time was under the sway of Byzantine civilization, where the official language was Greek, the author was apparently unable to utilize sources written in Greek. Thus, in examining the sources used in the writing of this book, we must appreciate the importance of the author's background education in Latin.

Two main sources were utilized in the composition of the main part of the book dealing with the Second Temple period. The first was a Latin mss containing 16 of the 20 books of Josephus' *Ant* and a paraphrase of Josephus' *JW*. This Latin paraphrase, commonly called *Hegesippus*, was written around A.D. 370; and it is noteworthy that the four extant Latin mss of this paraphrase were all written in Italy, where the author of Josippon lived and wrote. Like *Hegesippus*, the book of Josippon ends with the fall of Masada. Although it is not certain, it also appears that the author of Josippon knew some scattered bits of information from *JW* itself; and he also refers to Josephus' *AgAp*. The author's second main source for Second Temple history was the Apocrypha (in the Vulgate). In his description of the Maccabean period, the author depends on 1–2 Maccabees, which he combined in order to present a clearer picture of the events. From 1 Esdras 3–4 he based his description of the contest of the three young men, in which Zerubbabel was victorious. His stories about Daniel's victory over Bel and the dragon and about Esther and Mordecai are recounted according to the apocryphal additions to Daniel and Esther. An additional source for Esther's prayer is the prayer of Aseneth as it appeared in one of the Latin translations of *Joseph and Aseneth*, a Jewish romance originally written in Greek (Flusser 1985).

In composing that portion of the book dealing with the history of ancient Italy and the founding of Rome, the author drew upon various legends contained in early medieval Latin sources, which themselves were obscure and have not been preserved. However, it is possible to detect some of the more reliable roots of these sources; e.g., there is a later elaboration of the chronicle by the Church Father Jerome, a reference to Cyrus' death from the patristic historian Orosius (ca. 400), a reference to the beginning of Roman history from the Roman poet Virgil, and a reference to the war with Hannibal from Titus Livius.

Thus, when following his main historical sources, the original author of the book of Josippon was a responsible historian with excellent historical insight, whose integrity as a historian shaped his use of sources and limited his use of fables and other fantastic stories. This is in marked contrast with the person who prepared the pseudepigraphic version on which the Constantinople edition was based (see C below).

3. Impact. Because it was directed to readers unfamiliar with Latin and Greek, the book of Josippon quickly became a first-rate source of information about the Second Temple period for both Jews and Arabs—an Arabic translation had been completed by the time of the Arab scholar Ibn-Hazm (ca. 1063), who referred to the book by name (see Wellhausen 1897; Pines 1985). Jewish biblical and Talmudic scholars who did not know the OT Apocrypha and believed that the book was written by Josephus himself (including such famous commentators as Rashi [ca. 1100]), all used the book of Josippon in their treatises and commentaries.

However, the book of Josippon did not satisfy those Christians (and Muslims) who thought that from it they could learn what Josephus had recorded about Jesus and the rise of Christianity. Because the last four books of Josephus' *Ant* were not accessible to him, the author of Josippon himself was unaware of the passages about Jesus (*Ant* 18.3.3 §63–64), about his brother James' martyrdom (20.9.1 §200), and about John the Baptist (18 §116–19). However, because he utilized *Hegesippus*, he was familiar with its passages alluding to Christian subjects; but with the exception of a reference to John the Baptist, he omitted these passages altogether. Thus the original author of Josippon wrote nothing about Jesus.

Nonetheless, in two extant mss of Josippon (and partially in a third) a small text, written in imitation of Josippon's style, was interpolated (see Levi 1932; Flusser 1978–80: 1, appendix). Written sometime before 1150, this interpolation contains a confused and polemical story about Jesus and the beginnings of Christianity along with a story about Susanna (derived from the OT Apocrypha). The stories are set during the reign of the emperor Caligula (A.D. 37–41); thus the hero of the Susanna story is renamed from Daniel to Nahman. In this text Jesus' claims are connected with those of the insane Caligula, showing that this interpolation was influenced by the earlier (Aramaic) form of the medieval Jewish story *Toledot Yeshu* ("The History of Jesus"), which was blatantly anti-Christian. This interpolation was subsequently condensed into a note of only a few lines. Only vestiges of this note appear in the Mantua printed edition of 1480, probably the result of censorship. This brief note about Jesus is also preserved in only one of the two mss on which the 1510 Constantinople edition was based; in the other it was deleted by an ecclesiastical censor. It was then omitted in all subsequent printed editions, from the first Constantinople print (1510) on.

C. Subsequent (Constantinople) Form

As noted above, from the recent study of the mss evidence, we now know that the original author of the book

of Josippon was a learned Jew keenly aware of his responsibilities as a historian. He did not pretend that his work was written by Josephus, but rather cited Josephus as his main source. On the whole his references to Josephus are basically correct; however, he refers to Josephus incorrectly as "Joseph ben-Gurion," when in fact his real Hebrew name was "Joseph ben-Matthias." Here the original author of Josippon was simply misled by his Latin source (*Heges.* III.3.27, based upon *JW* 2 §253), where "Joseph the son of Gorion" is named first among the Jewish leaders of the war.

However, no one can claim that the subsequent author of the expanded form of the book of Josippon—the form underlying the Constantinople printed edition—was a responsible historian. Although he himself did not lack Jewish or secular knowledge, his secondary reformulation of the book of Josippon was written in the spirit of unrestrained medieval fantasy, incorporating a number of fictitious elements. For example, he invented an imaginary description of the crowning of Vespasian in Rome (by a Pope!), patterned according to the custom of crowning medieval emperors.

This author made one other change that had a significant impact on how the book of Josippon would be viewed in the centuries following: he converted it into a pseudepigraphon. He took advantage of three things to create a book that no longer simply cited Josephus as a main source but actually now claimed to have been written by Josephus himself. The first of these was the fact that the name of the original author had been forgotten, and thus, since Josephus is often expressly quoted in the book, it was—from the 11th century on—commonly ascribed to Josephus himself. The second was the title that had come to be associated with the book—*Sefer Josippon*, "the book *of* Josippus/Josephus." The third was the knowledge that, before writing *JW* in Greek for his Roman audience, the 1st-century Josephus composed it in his native language (*JW* 1. Proem 1 §3), a version of *JW* that has not survived. See JOSEPHUS. Thus he cast his revision of Josippon in such a way as to portray Josephus speaking in the first person about himself and about the purpose of his book, giving the false impression that this expanded form of the Hebrew Josippon was the lost original that Josephus had initially written for fellow Jews. This, of course, greatly enhanced the reputation of this work, since many medieval Jews, Christians, and Muslims believed this false ascription of authorship to Flavius Josephus.

It appears that this recasting of the original Josippon occurred during the first half of the 12th century, and no later than ca. 1160. Sometime in the 14th century it was edited by Judah Leon Mosconi, whose edition became the basis of the Constantinople printed edition of 1510. This edition immediately became the standard; and from the 16th century on it was translated into Yiddish, Ladino, Latin, German, English, Czech, and Polish. Thus, until the recent preparation of a new critical edition, only this secondary revision of Josippon was known. Modern scholars were quick to recognize its pseudepigraphic character but to view it, nevertheless, as an important source of medieval Jewish folklore containing vestiges of ancient Jewish sources and legends.

DAVID FLUSSER

JOTAPATA (PLACE). See IOTAPE (PLACE).

JOTBAH (PLACE) [Heb *yoṭbâ*]. The hometown of Haruz, whose daughter Meshullemeth married Manasseh, king of Judah, and gave birth to his son and heir Amon (2 Kgs 21:19). Forrer (1920: 61) has suggested that the place name *[]-at-bi-ta* that appears in the annals of Tiglathpileser III, describing his 732 B.C.E. campaign to Galilee (*ANET*, 283), be restored to *ia-at-bi-te* and be identified with biblical Jotbah. According to the annals 650 prisoners were exiled from this place.

It has also been suggested that Jotbah be identified with "Jotapata," the fortress where Josephus was besieged by Vespasian (*JW* 3.141–334), with "Yŏdpat" (*M. ʿArak.* 9:6; Klein 1939: 163), and with "Yōṭbat" of Talmudic literature (*t. Nida* 3:11; *b. Nida* 20A). All four have been identified with Khirbet Shifāt (M.R. 176248) N of the Beth Netofa valley. The finds from this site and its situation conform to Josephus' very dramatic description of Jotapata. See also IOTAPE (PLACE). However, in recent surveys (Meyers, et al. 1978: 6) Iron Age finds have not been found at the site; Gal (1982: 22, 117) therefore suggests that the biblical Jotbah be identified with Kerem el-Ras (M.R. 181239). The land adjoining this ten acre site is called Jifat, and the pottery collected there dates from the 10th to the 8th century B.C.E.

It is significant that the grandson of MESHULLEMETH of Jotbah, King Josiah, married Zebudah, a woman from the town of Rumah (2 Kgs 23: 36). Rumah is either identified with Khirbet Ruma (M.R. 177243) or is located in its vicinity. This site is near both proposed locations of Jotbah, 6 km NE of Kerem el-Ras and 10 km S of Khirbet Shifāt.

JOTBATHAH (PLACE) [Heb *yoṭbātâ*]. The 18th encampment of the Israelites, after leaving the Wilderness of Sinai, as listed in Num 33:33–34, where it is placed between Hor-haggidgad and Abronah. In Deut 10:7 it is listed as the station after Gudgodah. The Deuteronomy passage also relates that the area was well supplied with water, which probably is the basis for its name: "Pleasantness." Suggested locations include et-Ṭaba, the source of a marshy winter lake near the Wâdī Ghadhaghed (Abel *GP,* 216; Simons *GTTOT,* 259, and map IIIc; M.R. 153922), and the vicinity of Ṭabeh, about 11 km SW of Eilat (Aharoni *LBHG,* 199–200; Rothenberg 1961: 163–64; M.R. 139878). Robinson visited the latter area but did not mention it in connection with the biblical site (1856: 160–61). For a discussion of the location of any of the places associated with the journey of the Israelites from Egypt through Sinai, see DOPHKAH.

JEFFREY R. ZORN

JOTHAM (PERSON) [Heb *yôṭām*]. **1.** The son of Jahdai, a Judahite who belonged to the clan of Caleb (1 Chr 2:47).

2. The youngest of the 70 sons of Jerubbaal, who was also known as Gideon (Judg 9:5; cf. 8:30). By hiding himself, Jotham escaped the fury of his half-brother Abimelech who, with the help of hired rascals, murdered the remaining sons of Jerubbaal. With these rivals eliminated, the citizens of Shechem made Abimelech their king (Judg 9:6). Once informed about Abimelech's investiture, Jotham went to the top of Mt. Gerizim overlooking Shechem and projected his voice to those standing in the valley below. By means of a powerful fable (Judg 9:8–15), Jotham rebuked the men of Shechem who had supported Abimelech's conspiracy. This intricately structured fable discloses that when the trees sought for a king to rule over them, they were turned down by the olive, the fig, and the vine, which were thoroughly committed to their ordinary and useful functions. But when the bramble was offered the kingship, it accepted. The irony is powerful. If the olive, the fig, and the vine are understood agricultural symbols of goodness, it follows that the bramble would be an easily recognized symbol of uselessness.

In the ensuing application (Judg 9:16–20), the fable is interpreted against Abimelech's supporters, who have not acted "in good faith and honor" (vv 16, 19). Having forgotten the risks that Jerubbaal had taken in their behalf, they sponsored the slaying of his legitimate sons and rallied around a scoundrel of their own clan. Jotham concluded his speech with a curse against Shechem and its king that was fulfilled three years later when the city was demolished and Abimelech was struck by a lethal millstone hurled by a nameless woman (Judg 9:53–54). Lindars (1973: 361) argues that by speaking a fable, Jotham chose to express his criticism obliquely. His listeners were induced to ponder their role in making Abimelech king. But whatever the style of his critique, Jotham was required to flee for his life. In this deftly framed attack, Jotham articulated an antimonarchic sentiment that was popular among the more conservative members of the Israelite tribal confederacy.

3. The son of Uzziah (presumably the throne name for Azariah; 2 Kgs 15:32; 1 Chr 3:12) who first served as regent (ca. 750–742 B.C.E.) before succeeding his father as king of Judah (ca. 742–735 B.C.E.). His mother was Jerusha, "the daughter of Zadok" (2 Kgs 15:33), likely "the hereditary priest in Jerusalem" (Gray *1 and 2 Kings* OTL, 629). Though neither 2 Kings 15 nor 2 Chronicles 27 provides more than a cursory treatment of Jotham's reign, both sources report that he ascended to the Jerusalem throne at the age of 25 and ruled for 16 years (2 Kgs 15:33; 2 Chr 27:1). After a consideration of Jotham's historical context, which is partially clouded by perplexing chronological references, we shall note how this Judean king is respectively treated by the Deuteronomistic Historian and the Chronicler.

a. Jotham's Historical Context. Though on occasion Judah was required to acknowledge the supremacy of Israel under Jeroboam II (ca. 786–746 B.C.E.), the reigns of Uzziah (ca. 783–742 B.C.E.) and Jotham constituted a period of prosperity for Judah. Having mended Jerusalem's defenses, reorganized its army, and restored the distant Edomite site of Elath (Ezion-geber?) as a Judean seaport (2 Kgs 14:22), Uzziah bequeathed a sturdy kingdom to his son. Whereas Uzziah undoubtedly retained the title of king as long as he lived, the leprosy that he suffered toward the end of his regal tenure rendered him incapable of performing the duties of his office. Thus Jotham, as the crown prince, took charge of the affairs of state (2 Kgs 15:5–6; 2 Chr 26:21). The discovery of a signet ring with a seal bearing the Hebrew inscription *lytm,* "Belonging to Jotham" in the period III city at Tell el-Kheleifeh (possibly Ezion-geber) seems to buttress the biblical witness that during the 8th century B.C.E. Judah's monarchs extended their influence into Edom. While the matter is less than unequivocal, the lack of any additional title (e.g., "of the king") makes Uzziah's son Jotham a likely referent. Glueck (1959: 167–68) perceives this ring to be the badge of office of the person who was appointed to govern this region in Jotham's behalf.

It is impossible to establish a precise chronology for Jotham. According to 2 Kgs 15:30 Hoshea became king of Israel during "the twentieth year of Jotham the son of Uzziah." This synchronism is contradicted by 2 Kgs 17:1, which links Hoshea's arrival on the Israelite throne with the rule of Jotham's son Ahaz. Nor can 2 Kgs 15:30 be reconciled with the notation in 2 Kgs 16:33 that Jotham's rule spanned 16 years, unless his period as regent of Judah is to be added to 16 years of independent rule. It is more likely, however, that the 16-year figure encompasses Jotham's functions as both regent and king. Given the credibility of the synchronism in 2 Kgs 15:32, which links the advent of Jotham's rule with the second year of Pekah's tenure as king of Israel, perhaps Jotham's role as regent began in ca. 750 B.C.E.; and with Uzziah's death in ca. 742 B.C.E., his status shifted from regent to monarch (Albright 1945: 21). Since certain knowledge about the length of Jotham's tenure is beyond our reach, Gray (70, 628) advances the reasonable proposal that Pekah's second year as

Israel's sovereign may signal Jotham's assumption of duties as regent and that 2 Kgs 15:33 credits Jotham with a six-year reign (perhaps "when cyphers instead of words were used," Heb *šēš* [six] was misread as *šēš ʿeśrē* [sixteen]). Finally, the Chronicler's presentation of Jotham of Judah and Jeroboam II of Israel as contemporaries (1 Chr 5:17) poses no problem so long as the former is understood to have the status of regent.

b. Jotham in the Deuteronomistic History. Jotham is introduced as the one who governed "the people of the land" once his father Azariah (Uzziah) had become divinely stricken with leprosy (2 Kgs 15:5). In his ritually unclean condition, Uzziah would be dependent on his son for the execution of regal functions. In 2 Kgs 15:32–38 the focus narrows on Jotham himself. Following mention of his age when he entered the regal office, length of tenure, and mother's name (2 Kgs 15:33), a formulaic phrase assesses Jotham in an approving manner. As had Uzziah before him (2 Kgs 15:3), Jotham "did what was right in the eyes of the Lord" (2 Kgs 15:34). Even so, since Jotham failed to demolish the "high places" (Heb *bāmôt*), his people persisted in their religious apostasy (2 Kgs 15:35a—the wording replicates that used in the presentations of Amaziah's reign in 14:4 and Uzziah's in 15:4). Prior to mention of Jotham's death, burial, and replacement on the throne by his son Ahaz (2 Kgs 15:38), two more distinctive disclosures are made about his reign. First, Jotham is credited with having constructed "the upper gate of the house of the Lord" (2 Kgs 15:35b). Presumably this is the N gate within the Jerusalem temple compound to which Jer 20:2 and Ezek 9:2 allude. Second, the Syro-Ephraimite coalition involving two staunch anti-Assyrian monarchs, Pekah, king of Israel and Rezin, king of Aram, is depicted as emerging during Jotham's period of rule; and the havoc it played with Judah is perceived as divinely instigated (2 Kgs 15:37). Though the crisis would escalate during the reign of Ahaz (see Isa 7:1–8:15), Judah felt discomfort even as Jotham governed.

c. Jotham in Chronicles. Though the Chronicler's portrayal of Jotham (2 Chr 27:1–9) shares much in common with its Deuteronomistic antecedent, one noteworthy deletion and several new particulars serve to intensify this monarch's virtue and competence. On the one hand, the impact of the Syro-Ephraimite coalition on Judah is not even hinted. On the other, Jotham is presented as a devout man of faith, master builder, and triumphant leader in the battlefield. As one who "ordered his ways" before the deity (2 Chr 27:6), Jotham's righteousness is set, in general terms, over against his people's proclivity for "corrupt practices," and, in specific terms, over against his father Uzziah's intrusion as a lay person into the sacred precincts of the Jerusalem temple which brought on his leprosy (2 Chr 27:2; cf. 26:16–21). The king's building program extended well beyond the "upper gate" of the temple complex. Concentrating on "the wall of Ophel" (2 Chr 27:3) to the S, Jotham seems to have augmented Uzziah's earlier efforts at strengthening Jerusalem's defenses (an activity in which Hezekiah [2 Chr 32:5] and Manasseh [2 Chr 33:14] would later engage; see Simons 1952: 330–31). Moreover, Jotham improved Judah's position by constructing cities in the Judean highlands and erecting "forts and towers" in the wooded regions (2 Chr 27:4). The superlative aspect of the Chronicler's report, however, is discernible in his disclosure regarding Jotham's triumph over the nomadic Meunites, who infiltrated Judah—here we accept the conjecture of Miller and Hayes (*HAIJ,* 311) that "Ammonites" in the Heb text (2 Chr 27:5) should be corrected to "Meunites." The amount of tribute that the enemy rendered to Jotham (27:5), estimated by Myers (*2 Chronicles* AB, 156) as 3.25 tons of silver and 65,000 bushels each of wheat and flour, is manifestly exaggerated. Though the Chronicler does not present Jotham's accomplishments in a dispassionate manner, the impression he gives that this Judean king was skilled in matters of national defense has an authentic ring to it.

J. KENNETH KUNTZ

JOY. The experience of deliverance and the anticipation of salvation provide the most significant occasions for rejoicing among the people of God in the OT. The coming of the Messiah, who delivers his people and brings salvation becomes the basis for rejoicing in the NT. The response of joy, gladness, or happiness is not only a deep inward feeling, but is expressed in celebration when God's people gather together.

The idea of joy is most commonly expressed in the OT by *śimḥâ/śamaḥ* and in the NT by *chara/chairō.* Among the other 12 Hebrew roots used for some aspect of joy, the most frequent are *gyl, rnn, śwś,* and *ʿlz.* The LXX prefers the Gk word *euphrainō* to translate *śamaḥ* and inclines toward *agalliaō* (its first occurrence in Greek literature) to translate *gyl,* the latter expressions more commonly used of exultant joy. Although *chara/chairō* are not the prominent words for joy in the LXX, they become so in the NT perhaps because of their common use during the time of the NT. They are found, for instance, in a papyrus expressing the joy of friends on the occasion of a marriage (*P. Oxy.* 3313.4, 20). In addition to the terms *euphrainō* and *agalliaō,* the NT also employs *makarios/makarizo,* commonly translated "blessed" or "happy," and *kauchasthai/kauchēma,* "boast."

In the OT rejoicing is frequently expressed in connection with the feasts; in fact, they are called "times of rejoicing" (Num 10:10). Recalling God's marvelous act of delivering Israel from bondage, the Feasts of Passover and Unleavened Bread were occasions of great joy (2 Chr 30:21–27; Ezra 6:22; cf. also Psalms 95 and 98). Communal exultation also characterized the Feasts of Pentecost and Tabernacles (Deut 16:11, 14, 15; Lev 23:40) at which times the people of Israel were enjoined to remember that they were once slaves in Egypt (Deut 16:12). Similarly, the Feast of Purim was celebrated with joy and gladness to celebrate divine deliverance from potential annihilation under Persian rule (Esth 8:17).

Yahweh's effective help in battle gave occasion for ex-

pressing joy (2 Chr 20:27) as so often illustrated in the Psalms (Pss 9:2; 13:7; 21:1; 109:28). The knowledge of the nearness and protection of God in times of need and distress brought joy (Ps 16:9). One could find joy in sensing God's presence at any time as in Ps 16:11: "You fill me with joy in your presence" (cf. Ps 21:6).

Past deliverance gave Israel hope for the future. In particular the Prophets point to the joy yet to be experienced, an eschatological joy. This can be seen especially in Isaiah 40–66, where there are numerous references to joy and rejoicing. This celebration is connected not only with the salvation of Israel (Isa 44:23; 65:14–19; cf. also Zeph 3:14–17; Zech 2:10), but with the gift of salvation God is preparing for all humankind (Isa 56:7). The righteous will ultimately experience everlasting joy (Isa 51:11).

Israel's corporate joy was commonly expressed in great celebration. Musical instruments often accompanied singing and dancing (1 Sam 18:6). David had in fact appointed the Levites "to sing joyful songs" to the accompaniment of musical instruments such as lyres, harps, and cymbals (1 Chr 15:17). The intensity of celebration was sometimes quite high as illustrated by the account of the anointing of Solomon as king of Israel: "And all the people went up after him, playing on pipes, and rejoicing with great joy, so that the earth was split by their noise" (1 Kgs 1:40; RSV). The book of Psalms gives numerous examples of the joyous songs of praise, or victory, sung by the people of God (e.g., Psalms 33 and 95).

Not only do God's people rejoice, but God himself is represented as rejoicing "in his works" (Ps 104:31) and in his people (Deut 30:9; Pss 147:11; 149:4; Zeph 3:17). Joy does not always have religious connotations in the OT. Good wine can bring joy (Ps 104:15; Judg 9:13), and so also should a birthday (Job 3:7), and the years of one's youth or old age (Eccl 11:8–9).

The NT era was inaugurated by the cry of the angel of the Lord: "Do not be afraid; for behold, I bring you good news of a great joy which will come to all the people; for to you is born this day in the city of David a Savior, who is Christ the Lord" (Luke 2:10–11). The appearance of the Messiah providing salvation for all humankind permeates every NT book with the mood of joy. Schramm thus aptly observes, "this cry of joy is a fitting title for the whole NT" (Otto and Schramm 1980: 94).

Among the first three gospels Luke especially highlights the soteriological aspect of joy (Gulin 1932–36, 1: 99). The parables of the lost sheep, the lost coin, and the prodigal son reveal the joyous response of the father (and the angels) when one sinner repents and is saved (Luke 15, esp. vv 5, 6, 7, 9, 10, 32). Conversely, there is joy for the one who receives salvation (Luke 19:6; cf. Matt 13:44). The progress of the salvation of God extending to the gentiles becomes a significant occasion of joy in the book of Acts (Acts 11:23; 13:48; 15:3). The gentiles who are saved are filled with joy (8:8, 39).

All the redeemed are brought into a close union with Christ, where they experience great joy. Abiding in Christ brings "fullness of joy," according to John (John 15:11). Paul likewise finds the ultimate source of the believer's joy stemming from being "in Christ" (Phil 4:4; 3:1). It is upon this premise that he encourages his readers to let joyfulness be a constant characteristic of their daily lives (cf. also 1 Thess 5:16). Paul also sees the experience of joy as a result of the indwelling of the spirit (1 Thess 1:6; Rom 14:17; cf. also Acts 8:39). He in fact describes joy as a "fruit" of the Spirit's presence (Gal 5:22).

The life of discipleship is a life of increasing joy—joy not only in growing in the faith (e.g., Phil 1:25), but in helping others grow in the faith. The NT is replete with references to the joy of those involved in the mission of the Church and the edification of its members. Paul rejoiced when he saw the successful spread of the gospel (Phil 1:18) and on occasions when he had indication of spiritual growth among the members of the churches (e.g., Phlm 7; 1 Thess 3:9; Rom 16:19; Col 2:5). When Paul discerned a positive response on the part of the Corinthians to his tearful visit and sorrowful letter, he told them of his great joy (2 Chr 7:4, 7, 9, 13, 16). John likewise rejoiced in the obedience of his community (2 John 4; 3 John 3, 4).

The NT is much less explicit than the OT about the manner in which joy is expressed. There is no doubt that joy was understood in terms of a deep inward experience, but this inner disposition likely found tangible expression in the Christian communities when they gathered. It would probably be safe to assume that the OT concept of joyous celebration with jubilant singing and praise to God provided a model for the NT congregations. The NT does stress that joy is to be shared (Rom 12:12; 2 Cor 7:13) and even employs a word *(sugchairō)* that emphasizes the shared nature of joy (1 Cor 12:26; Phil 2:17–18; Luke 15:6, 9).

The deep-rooted joy of the Christian is not abated when the circumstances of daily life are adverse. Joy is experienced in suffering and even persecution. This was the teaching of the Sermon on the Mount (Matt 5:11–12) and the experience of the early Church (Acts 5:41; cf. 1 Thess 1:6). Paul exemplified this possibility of joy in suffering in his own life (2 Cor 7:4; Col 1:24) and encouraged his churches to follow suit (Phil 2:17–18). Suffering is prominent in the background to the statements concerning joy in 1 Peter and Hebrews. Eschatological anticipation, however, provided incentive for rejoicing even when one's personal property was plundered (Heb 10:34) or when one faced persecution (1 Pet 4:13). The early Church looked forward to the second advent of Christ as a time of joy (Matt 25:21, 23). The ultimate triumph of God and "the marriage of the Lamb" will consummate the joy of God and all his people (19:7) and result in cries of "Hallelujah!" (Rev 19:1, 3, 4, 6).

CLINTON E. ARNOLD

JOZABAD (PERSON) [Heb *yôzābād*]. Jozabad occurs only in postexilic biblical writings. While it was quite possibly a common Judean name in the Persian period, the Chronicler seems to have retrojected anachronistically the name of a levitical treasurer from the time of Ezra and

Nehemiah (#6) to legitimate his portrayal of the reigns of Hezekiah (#3) and Josiah (#4).

1. A Benjaminite warrior, who, according to the Chronicler, joined David's forces at Ziklag before David became king (1 Chr 12:5—Eng 12:4). See JERIMOTH. The Chronicler associates Jozabad with Gedar, a town in S Judah.

2. Two Manassites, who, according to the Chronicler, deserted their kinsman Saul to join the forces of David at Ziklag (1 Chr 12:21—Eng 12:20).

3. According to the Chronicler a levitical overseer of surplus temple offerings gathered during Hezekiah's temple reforms (2 Chr 31:13). The Chronistic style of the chapter clearly demarcates it as the Chronicler's own invention. The Chronicler seems to have taken the name of a levitical overseer of temple revenues from the time of Ezra and Nehemiah (see #6) and applied it anachronistically to legitimate his portrayal of the reforms of Hezekiah.

4. A levitical prince who donated sacrificial animals for Josiah's Passover (2 Chr 35:9). As Josiah's Passover evidences the Chronicler's style, Jozabad represents the Chronicler's use of a levitical name from his own day to legitimate his narrative of an earlier period. Given substantial onomastic overlap with 2 Chronicles 31, the Chronicler uses the name Jozabad to show continuity between Josiah's Passover and Hezekiah's reforms. 1 Esdr 1:9 reads "Joram" rather than "Jozabad."

5. A member of the priestly family of Passhur who lived in the Persian province of Judea during the mission of Ezra (Ezra 10:22). Jozabad's family, the family of Passhur, composed the largest priestly clan to return from Exile with Zerubbabel (Ezra 2:38), though it ultimately disappeared from the Second Temple priestly houses. Despite, or perhaps on account of, his priestly lineage, this Jozabad had married a non-Judean wife. He consented to divorce her during the reforms of Ezra under the threat of complete ostracism from the Jerusalem temple state. For the authenticity of the list of Ezra 10, see JERIMOTH. 1 Esdr 9:22 reads Gedaliah instead of Jozabad.

6. A prominent levitical temple official in the Jerusalem temple during the mission of Ezra (Ezra 8:33). From the brief description of his duties in Ezra 8:34, Jozabad aided in the administration of temple treasuries (see 1 Chr 26:20–28). Jozabad's family had returned to Judah from Babylon with Zerubbabel (Ezra 2:40). Their prominence among the levitical families may help explain his important social position within the Judean temple state (see also Ezra 3:9; Neh 9:4–5; 10:10–11—Eng 9–10; 12:8). See JESHUA (PERSON). While certainty is not possible, this Jozabad most likely married a non-Judean wife and consented to divorce her under the threat of complete ostracism from the Jerusalem temple state (Ezra 10:23). He later was among the levitical teachers who interpreted the Torah to the people at Ezra's public reading (Neh 8:7). It is also possible that this same levitical Jozabad appears again during Nehemiah's governorship as an administrator of the outside work of the temple (Neh 11:16), a duty seemingly associated with the temple treasuries (see 1 Chr 26:20–32). The precise attribution is difficult, however, because of the contested date of Nehemiah 11. Kellermann (1966: 209–27) argues that the list reveals the inhabitants of Jerusalem in the years immediately before Exile, while Blenkinsopp (*Ezra-Nehemiah* OTL, 322–27) argues that the list reflects the years subsequent to Nehemiah, to which Jozabad may represent a later addition to fill out the lists. Williamson's hypothesis (*Ezra, Nehemiah* WBC, 344–49) that Nehemiah 11 reflects another account of Nehemiah's repopulation of Jerusalem (see Nehemiah 7), however, seems to account best for the available data. If so, in Jozabad we have a brief example of a levitical temple official whose career spanned the missions of both Ezra and Nehemiah.

JOHN W. WRIGHT

JOZACAR (PERSON) [Heb *yôzākār*]. A servant of Joash, king of Judah, who, with Jehozabad, conspired against the king and killed him (2 Kgs 12:22—Eng 12:21). In some mss he is called Jozabad, instead of Jozacar. This variation can be accounted for as a copyist's error wherein the *bet* is read as a *qop* and the *dalet* as a *reš*. In 2 Chr 24:26 he is named Zabad, a shortened form of Jozabad.

PAULINE A. VIVIANO

JOZADAK (PERSON) [Heb *yôṣādāq*]. Var. JEHOZADAK. The father of Jeshua, a priest contemporary with Zerubbabel (Ezra 3:2, 8; 5:2; 10:18; 1 Esdr 5:5, 48, 56; 6:2; 9:19; Sir 49:12), and the grandfather of Joiakim, a priest contemporary with Nehemiah (Neh 12:26). The name is a shortened form of Jehozadak, which means "Yahweh is righteous." The shortened form is used for this individual in Ezra-Nehemiah along with Jeshua (*yēšûaʿ*), a shortened form of Joshua (*yēhôšūaʿ*). The longer forms for these two individuals are preserved in 1 Chronicles, Haggai, and Zechariah. For a full discussion of this variant, see JEHOZADAK.

JEFFREY A. FAGER

JUBAL (PERSON) [Heb *yûbāl*]. Son of Lamech and Adah and the brother of Jabal, a descendant of Cain (Gen 4:21). Jubal is described as the father of lyre and pipe players. Jubal's association with the pipe and his relation to Jabal, who may have been associated with nomadic shepherding, have led to comparisons between him and the Greek shepherd god Pan, inventor of the lyre (Westermann 1984: 331); Wenham *Genesis 1–15* WBC, 113). Two other possible connections with music include (1) the name of Jubal's half-sister, Naamah, which may suggest the playing of music (cf. Ug *nʿm*); and (2) the similarity between the name Jubal and the Hebrew word for the ram's horn (Heb *yôbēl*), which was blown to proclaim special days and seasons (*EncMiqr* 3:582; Gabriel 1959: 417). As a passive participle derived from the root *ybl* (see JABAL), Jubal may mean something like "brought in the procession," possibly reflecting the appearance of this root in the *yôbēl*, the jubilee year (North 1964: 380).

RICHARD S. HESS

JUBILEE, YEAR OF. Leviticus 25 details the biblical system of jubilee. The Hebrew term at the center of this system, *yôbēl,* "jubilee" has an uncertain etymology. The most common view is that *yôbēl* means "ram" (cf. Phoen *ybl*), since ram's horn was used for trumpets and the year of jubilee was announced by the blowing of the trumpet. But the word used in the instructions of Lev 25:9 is the more common *šôpar.* Elsewhere, however, *yôbēl* or *qeren hayyôbēl,* "the horn of the ram" or *šôpĕrôt hayyôbēlîm,* "trumpets of rams" are expressions used for trumpets (e.g., Exod 19:13; Josh 6:4–8, 13). The word *jubilee,* derived from *yôbēl,* is etymologically unconnected with Lat *jubilare* and its English derivative "jubilation."

The year of jubilee came at the end of the cycle of 7 Sabbatical Years. Lev 25:8–10 specifies it as the 50th year, though some scholars believe it may have been actually the 49th—i.e., the 7th Sabbatical Year. In this year there was a proclamation of liberty to Israelites who had become enslaved for debt, and a restoration of land to families who had been compelled to sell it out of economic need in the previous 50 years. Instructions concerning the jubilee and its relation to the procedures of land and slave redemption are found entirely in Leviticus 25. But it is also referred to in Leviticus 26 and 27 in other contexts.

A. Socioeconomic Background

The jubilee was in essence an economic institution. It had two main points of concern: the family and the land. It was rooted therefore in the kinship structure of Israelite society and the system of land tenure that was based upon it.

1. Israelite Kinship Structure. Israel had a three-tier pattern of kinship, comprising the tribe, the clan, and the household. Gideon's modest reply to his angelic visitor shows us all three: "Look at my clan—it is the weakest in the tribe of Manasseh; and I am the least in my father's house" (Judg 6:15). The last two smaller units had greater social and economic importance than the tribe in terms of benefits and responsibilities relating to individual Israelites. The father's house (Heb *bêt ʾāb*) was a place of authority, even for married adults like Gideon (Judg 6:27; 8:20). It was also the place of security and protection (Judg 6:30–32). The clan was a larger grouping of a number of fathers' houses and an important subsection of the tribe (Heb *mišpāḥâ*). The clans were named after the grandsons of Jacob or other members of the patriarchal family tree (see Numbers 26 and 1 Chronicles 4–8), thereby acknowledging that they were units of recognizable kinship (see Kartveit 1989). But sometimes the clan name was attached to the territorial area of its settlement, such as a village or group of villages. The clan had important responsibility in the preservation of the land allotted to its constituent households. The jubilee was primarily for the economic protection of the smallest of these units—the father's house. However, in Leviticus 25, it is interwoven with the economic practice of the redemption of land and persons; and those redemption procedures were primarily for the protection of, and the responsibility of, the clan. The two sets of provision were complementary, as we shall see. See FAMILY for full description of Israel's kinship terminology and structure.

2. Israelite Land Tenure. Whatever may have been the process by which the Israelites emerged in Canaan, once they were able to establish control over most of the land, they operated a system of land tenure that was based on these kinship units. Thus the territory was allotted to tribes, "according to their clans," and within the clans each household had its portion or "heritage." Judges 21:24 describes the Israelite soldiers returning each to his tribe, to his clan, and to his (household) inheritance. This system had two features that stand in complete contrast to the preceding pattern of Canaanite economic structure as described from the biblical perspective.

a. Equitable Distribution. In Canaan the land was owned by city-state kings and their nobles, with the bulk of the population as taxpaying tenant farmers. In Israel the initial division of the land was explicitly to the clans and households within the tribes, under the general rubric that each receive land according to size and need. The documentary evidence for this is to be found in the tribal lists of Numbers 26 (especially vv 52–56) and in the detailed territorial division of land recorded in Joshua 13–21, where the repetition of the phrase "according to their clans" indicates the intention that the land should be distributed throughout the whole kinship system as widely as possible.

b. Inalienability. In order to protect this system of kinship distribution, family land was made inalienable. That is, it was not to be bought and sold as a commercial asset, but was to remain as far as possible within the extended family or at least within the circle of families in the clan. It was this principle which lay behind Naboth's refusal to sell his patrimony to Ahab (1 Kings 21), and it is most explicit in the economic regulations of Leviticus 25.

B. Theological Basis

Lev 25:23 can be translated as follows: "The land shall not be sold permanently, for the land belongs to me; for you are 'guests' and 'residents' with me." This statement, at the heart of the chapter describing the jubilee, provides the hinge between the social and economic system de-

scribed above and its theological rationale. Following the inalienability rule, the chapter presents the two theological factors upon which the jubilee and related laws are based: the theology of the land and the status of the Israelites.

1. The Theology of Land. One of the central pillars of the faith of the Israelites was that the land they inhabited was Yahweh's land. It had been his even before Israel entered it (Exod 15:13, 17). This theme is found often in the Prophets and Psalms, as part of Israel's cultic tradition. At the same time, although ultimately owned by Yahweh, the land had been promised and then given to Israel in the course of the redemptive history. It was their "inheritance" (Deuteronomy passim), a kinship term appointing Israel as heir of Yahweh.

This dual tradition of the land—divine ownership and divine gift—was associated in some way with every major thread in Israel's theology. The promise of land was an essential part of the patriarchal election tradition. The land was the goal of the Exodus redemption tradition. The maintenance of the covenant relationship and the security of life in the land were bound together. Divine judgment eventually meant expulsion from the land, until the restored relationship was symbolized in the return to the land.

The land, then, stood like a fulcrum in the relationship between God and Israel (cf. its position in Lev 26:40–45). It was a monumental, tangible witness both to that divine control of history within which the relationship had been established and also to the moral and practical demands entailed by that relationship. For the Israelite, living as his family on his allotted share of Yahweh's land was proof of his membership in God's "family" and became the focus of his practical response to God's grace. Nothing that concerned the land was free from theological and ethical dimensions—as every harvest reminded him (Deuteronomy 26).

2. The Status of the Israelites. The Israelites are described in two ways in Leviticus 25.

a. Guests and Residents. "You are guests and residents [RSV; "aliens and tenants" in NIV] with me" (v 23). These terms, *gērîm wĕtôšābîm,* describe a class of people who resided among the Israelites in Canaan, but were not ethnic Israelites. They may have been descendants of the dispossessed Canaanites, or immigrants. They had no stake in the tenure of the land, but survived by hiring out their services as residential employees (laborers, craftsmen, etc.) for Israelite landowning households. Provided the household remained economically viable, its resident alien employees enjoyed both protection and security. But otherwise, their position could be perilous. Hence they are frequently mentioned in Israel's law as the objects of particular concern for justice because of their vulnerability.

The Israelites were to regard their status before God as analogous to that of their own residential dependents to themselves. Thus they had no ultimate title to the land—it was owned by God. Nevertheless, they could enjoy secure benefits of it under his protection and in dependence on him. So the terms are not a denial of rights, but rather an identification of specific classes of people as having a relationship of protected dependency.

The practical effect of this model for Israel's relationship with God is seen in vv 35, 40, and 53. If all Israelites share this status before God, then the impoverished or indebted sibling is to be regarded and treated in the same way as God regards and treats all Israel.

b. Slaves. "They are my slaves whom I brought forth out of the land of Egypt" (vv 42, 55). Three times in this chapter the Exodus is mentioned, twice more in the following chapter (26:13, 45). It was regarded as an act of redemption in which God had "bought" Israel for himself. Freed from slavery to Egypt, they were now slaves of God himself. Therefore nobody could now claim as his own private property a fellow Israelite, who belonged by right of purchase to God alone. The Exodus redemption thus provided the historical and theological model for the social and economic practice of redemption and jubilee. Those who are God's freed slaves are not to make slaves of one another (25:39, 42). This weight of theological tradition concentrated into 25:23 gives a seriousness to the economic measures outlined in the rest of the chapter.

C. Exegetical Outline

1. Detailed Analysis of Leviticus 25. Leviticus 25 is a complex chapter in which several different economic practices have been thrown closely together, along with parenthetic sections and exceptive clauses. Source critics have come to no kind of consensus over alleged documentary division of the material, and the multiplicity of theories is little help in understanding the chapter. However, in its present form, the text has some definable paragraphs that guide us through its provisions.

a. Vv 1–7. The chapter opens with the law of the SABBATICAL YEAR on the land. This is an expansion of the fallow year law of Exod 23:10–11, which was also further developed in Deut 15:1–2 into a year in which debts (or more probably the pledges given for loans) were to be remitted.

b. Vv 8–12. The jubilee is then introduced as the 50th year to follow the 7th Sabbatical Year. Verse 10 presents the twin concepts that are fundamental to the whole institution, namely, liberty and return: liberty—from the burden of debt and the bondage it may have entailed; return—both to the ancestral property if it had been mortgaged to a creditor, and to the family which may have been split up through debt servitude. It was these two components of the jubilee, freedom and restoration, that entered into the metaphoric and eschatological use of the jubilee in prophetic and later NT thought.

c. Vv 13–17. The financial implications of a recurring jubilee are then spelled out. The apparent sale of a piece of land really amounted only to a sale of the use of the land. So an approaching jubilee diminished the cost for the purchaser, inasmuch as he was buying the number of harvests until the jubilee restored the land to its original owner.

d. Vv 18–22. At this point some exhortation is inserted to encourage the observance of the sabbatical regulations, by promising special blessing in the preceding year. The theological principle was that obedience to the economic legislation of Israel would require, not prudential calculations, but faith in the ability of Yahweh to provide through his control of nature as well as history.

e. Vv 23–24. These central verses in the chapter consti-

tute a heading to the remaining paragraphs, which are primarily concerned with the economic redemption of land and persons, interwoven with the jubilee. We have already noted the major theological traditions embodied in them.

f. Vv 25–55. We come now to the practical details of redemption and jubilee. In these verses there are three descending stages of poverty with required responses, interrupted by parenthetic sections dealing with houses in cities, and Levite properties (29–34), and non-Israelite slaves (44–46). The stages are marked off by the introductory phrase, "If your brother becomes poor" (25, 35, 39, 47). Probably this phrase introduced an original series of redemption procedures, unconnected with the jubilee. The addition of jubilee regulations complicates matters in places but functions as a necessary complement to the effects of redemption.

(1) Stage 1 (25–28). Initially, having fallen on hard times (for any reason—none is specified), the Israelite landowner sells, or offers to sell, some of his land. To keep it within the family, in line with the inalienability principle, it was first of all the duty of the nearest kinsman (the *gō'ēl*) either to preempt it (if it was still on offer) or to redeem it (if it had been sold). Second, the seller himself retained the right to redeem it for himself, if he later recovered the means to do so. Third, in any case, the property, whether sold or redeemed by a kinsman, reverted to the original family in the year of jubilee.

(2) Exception (i): (29–31). The above rules did not apply to dwelling places in the walled cities. This was probably because the primary intention of the redemption and jubilee provisions was to preserve the economic viability of families through the secure possession of their inherited land. City houses were not part of that productive economic base, and so did not need to be subject to indefinite redemption rights or jubilee return to seller. However, village dwellings were treated as part of the rural scene and therefore were included.

(3) Exception (ii): (32–34). This is a rider to exception (i). Since the Levites as a tribe had no inherited share in the land but were allotted certain towns, their dwellings in them were to be subject to normal redemption and jubilee provisions.

(4) Stage 2 (35–38). If the poorer brother's plight worsens and he still cannot stay solvent, presumably even after several such sales, it then becomes the duty of the kinsman to maintain him as a dependent laborer by means of interest-free loans.

(5) Stage 3a (39–43). In the event of a total economic collapse, such that the poorer kinsman has no more land left to sell or pledge for loans, he and his whole family sell themselves to—enter the bonded service of—the wealthier kinsman. The latter, however, is commanded in strong and repeated terms, not to treat the debtor Israelite like a slave, but rather as a resident employee. This undesirable state of affairs is to continue only until the next jubilee—i.e., not more than one more generation. Then the debtor and/or his children (the original debtor may have died, but the next generation were to benefit from the jubilee, vv 41, 54), were to recover their original patrimony of land and be enabled to make a fresh start.

(6) Exception (iii) (44–46). This is a reminder that the redemption and jubilee provisions applied to Israelites and not to foreign slaves or resident aliens. This reinforces the point that they were primarily concerned with the distribution of land and the viability of Israelite families, neither of which applied to the nonlandowning population.

(7) Stage 3b (47–55). If a man had entered this debt bondage outside the clan, then an obligation lay on the whole clan to prevent this loss of a whole family by exercising their duty to redeem him. The list of potential kinsman-redeemers in vv 48–49 shows how the responsibility moved outward from the nearest kinsman to the extent of the clan itself ("family" in RSV v 49 is a misleading translation for Heb *mišpāḥâ*, "clan"). The whole clan had the duty of preserving its constituent families and their inherited land. It also had the duty to see that a non-Israelite creditor behaved as an Israelite should toward an Israelite debtor and that the jubilee provision was adhered to eventually.

2. Summary. From this analysis of the chapter, it can be seen that there were two main differences between the redemption and jubilee provisions. (1) Timing. Redemption was a duty that could be exercised at any time, locally, as circumstances required, whereas jubilee was twice a century as a national event. (2) Purpose. The main aim of redemption was the preservation of the land and persons of the clan, whereas the main beneficiary of the jubilee was the extended family, or "father's house." The jubilee therefore functioned as a necessary override to the practice of redemption. The regular operation of redemption over a period could result in the whole territory of a clan coming into the hands of a few wealthier families, with the rest of the families in the clan in a kind of debt servitude, living as dependent tenants of the wealthy—i.e., precisely the kind of land-tenure system that Israel had overturned. The jubilee was thus a mechanism to prevent this and to preserve the socioeconomic fabric of multiple household land tenure with the comparative equality and independent viability of the smallest family-plus-land units.

Now these household units held a central place in the experience and expression of Israel's covenant relationship with God, as can be seen from their role in social, military, judicial, cultic, and educational spheres. See FAMILY. In the light of this centrality of the family, the jubilee can be seen as more than merely an economic regulator (and certainly more than the utopian measure of social justice it is sometimes portrayed as). In attempting to maintain or restore the viability of such households, it was in fact aimed at preserving a fundamental dimension of Israel's relationship with Yahweh. We noticed this already in considering the weight of theological tradition packed into v 23. Three reminders of the Exodus and its implications (38, 42, 55) reinforce the point. This in turn explains why the neglect of these institutions, bemoaned in the following chapter (Leviticus 26) led not merely to economic distress but also to a broken relationship and eventual Exile—a connection also very clearly perceived by the Prophets.

D. Historical Question

But did it ever happen? Were the jubilee regulations real and practicable legislation, or were they academic and utopian? While there is evidence that kinship redemption

was practiced (Jeremiah 32, Ruth 4), there is simply no evidence of a national jubilee in the extant historical documents of Israel (though some would discern an allusion to a jubilee year in Isa 37:30, where a double year of fallow seems to be envisaged; but it may refer merely to the disastrous effect of invasion). This silence does not, of course, prove that it never did happen. Nor can we say that it was economically impossible and so could not have happened, because there is evidence from other ANE civilizations of periodic nationwide remissions of debt in connection with the accession of a new king. However this ANE evidence comes from centuries earlier than the origins of OT Israel (Gordon 1953; Finkelstein 1961; Lewy 1958).

Nevertheless, scholars are divided: some see the law as a late, idealistic, formulation from the same period as the Holiness Code within the Priestly compilation to which this part of Leviticus is usually assigned (Ginzberg 1932; *AncIsr;* Westbrook 1971). Others regard the jubilee as part of Israel's earliest, premonarchic, laws, which fell into disuse. This latter position is more commonly held by those scholars who have done most research into the ANE parallels and the sociological background (Schaeffer 1922; Jirku 1929; van der Ploeg 1972; Stein 1953; North 1954; Wildberger 1956; *IDBSup,* 496–98. Gottwald regards the redemption provisions, but not the jubilee, as reflecting "old conditions" [1979: 264]).

We have seen that the aim of the jubilee was to maintain or restore the socioeconomic basis of the nation's covenant relationship with God. This would reduce the likelihood of its being an exilic invention in view of evidence that there developed in the later period a loosening of the ancient family-land basis in the future vision of an expanded people of God that would include foreigners and eunuchs, (Isa 54:1; 56:3–7). Israel's identity and relationship with God would no longer be so closely tied to a social system in which kinship and land ownership were determinative of one's standing within the religious community. It is hard to see what purpose would have been served by framing new idealistic legislation designed to preserve those very things. Conversely, it makes sense to see the jubilee as a very ancient law which fell into neglect during Israel's history in the land, not so much because it was economically impossible, as because it became irrelevant to the scale of social disruption. The jubilee presupposes a situation where a man, though in severe debt, still technically holds the title to his family's land and could be restored to full ownership of it. But from the time of Solomon on this must have become meaningless for growing numbers of families as they fell victim to the acids of debt, slavery, royal intrusion and confiscation, and total dispossession. Many were uprooted and pushed off their ancestral land altogether. After a few generations they had nothing to be restored to in any practicable sense (Mic 2:2, 9; Isa 5:8). This would explain why the jubilee is never appealed to by any of the prophets as an economic proposal (though its ideals are reflected metaphorically). In the only occasion when a slave release is mentioned by a prophet (Jeremiah 34) the law appealed to was the Sabbatical Year release of Hebrew slaves (Exod 21:1–7; Deut 15:12–18)—not the jubilee. The people in question were fellow Judeans, but they were effectively landless (a definitive feature of the "Hebrew" class), not mortgaged debtors who could be restored to their property. The story shows how fragile and transient their actual release was.

E. Ethical Development

1. In the OT. We have seen that the jubilee had two major thrusts: release/liberty and return/restoration. Both of these lent themselves readily to the process of transfer from the strictly economic provision of the jubilee itself to a wider metaphoric application. There are allusive echoes of the jubilee particularly in later Isaiah. The mission of the Servant of Yahweh in Deutero-Isaiah has strong elements of the restorative plan of God for his people, aimed specifically at the weak and oppressed (Isa 42:1–7). Isaiah 58 is an attack on cultic observance without social justice and calls for liberation of the oppressed (v 6), specifically focusing on one's own kinship obligations (v 7). Most clearly of all, Isaiah 61 uses jubilee images to portray the one anointed as the herald of Yahweh to "evangelize" the poor, to proclaim liberty to the captives—using the word *dĕrôr* which is the explicitly jubilary word for release—and to announce the year of Yahweh's favor, almost certainly an allusion to a jubilee year. The ideas of redemption and return are combined in the future vision of Isaiah 35 and put alongside a transformation of nature itself. Thus in the OT the jubilee attracted an eschatological imagery while maintaining an ethical application in the present. Therefore it could be used to portray God's final intervention for messianic redemption and restoration; but it could also support ethical challenge for justice to the oppressed in contemporary history.

2. In the NT. Jesus announced the inbreaking of the eschatological reign of God. He claimed that the hopes of restoration and messianic reversal were being fulfilled in his own ministry. The "Nazareth manifesto" (Luke 4:16–30) is the clearest, programmatic statement of this and quotes directly from Isaiah 61, which is strongly influenced by jubilee concepts. Scholars are agreed that Jesus made use of jubilary imagery, though there is division over exactly what he meant by it. Some have argued that Jesus called for a literal enactment of the levitical jubilee (Trocmé 1961; Yoder 1972). Others, noting that Jesus used the prophetic texts and not the levitical law, argue that he was merely using jubilary language as a way of showing the kind of response required by the arrival of the kingdom of God, without intending an actual national jubilee. Sloan (1977) notes that Jesus' use of *aphēsis* carries both the sense of spiritual forgiveness of sin and also literal and financial remission of actual debts. Thus, the original background of economic *dĕrôr* has been preserved in Jesus' challenge concerning ethical response to the kingdom of God. Ringe (1985) traces the interweaving of major jubilee images into various parts of the gospel narratives and the teaching of Jesus (e.g., the beatitudes, the response to John the Baptist [Matt 11:2–6], the parable of the banquet [Luke 14:12–24], various episodes of forgiveness, teaching on debts [Matt 18:21–35], etc.). The evidence is broad and conforms to the pattern already set in the OT—namely, the jubilee as a model or image for the kingdom of God embodies both eschatological affirmation and ethical demand. Likewise in Acts the jubilary concept of eschatological restoration is found in the otherwise unique idea of

apokatastasis. It occurs in Acts 1:6 and 3:21, related to God's final restoration of Israel and all things. Significantly, the early Church responded to this hope at the level of economic mutual help—thus fulfilling the sabbatical hopes of Deuteronomy 15 (Acts 4:34 is virtually a quotation of Deut 15:4).

3. Contemporary Application. Without envisaging any literal enactment of its provisions, the jubilee still remains a powerful model in formulating Christian biblical ethics. Its primary assumptions and objectives can be distilled and used as a guide and critique for our own ethical agenda in the modern world.

a. Economically. The jubilee existed to protect a form of land tenure that was based on an equitable and widespread distribution of the land and to prevent the accumulation of ownership in the hands of a wealthy few. This echoes the creation principle that the whole earth is given by God to all humanity, who act as co-stewards of its resources. There is a parallel between the affirmation of Lev 25:23, in respect of Israel, that "the land is mine," and the affirmation of Psalm 24, in respect of humanity as a whole, that "the earth is the Lord's and everything in it, the world and all who live in it." The moral principles of the jubilee are therefore universalizable on the basis of the moral consistency of God. What he required of Israel reflects what in principle he desires for humanity—namely broadly equitable distribution of the resources of the earth, especially land, and a curb on the tendency to accumulation with its inevitable oppression and alienation. The jubilee thus stands as a critique not only of massive private accumulation of land and related wealth, but also of large-scale forms of collectivism or nationalization which destroy any meaningful sense of personal or family ownership.

b. Socially. The jubilee embodied a practical concern for the family unit. In Israel's case this meant the extended family, the "father's house," which was a sizable group of related nuclear families descended in the male line from a living progenitor, including up to three or four generations. This was the smallest unit in Israel's kinship structure; and it was the focus of identity, status, responsibility, and security for the individual Israelite. It was this that the jubilee aimed to protect and periodically to restore if necessary. Notably, it did so, not by merely "moral" means—i.e., appealing for greater family cohesion or admonishing parents and children—but by legislating for specific structural mechanisms to regulate the economic effects of debt. Family morality was meaningless if families were being split up and dispossessed by economic forces that rendered them powerless (Neh 5:1–5). The jubilee aimed to restore social dignity and participation to families through maintaining or restoring their economic viability. The economic collapse of a family in one generation was not to condemn all future generations to the bondage of perpetual indebtedness. Such principles and objectives are certainly not irrelevant to welfare legislation or indeed any legislation with socioeconomic implications.

c. Theologically. The jubilee was based upon several central affirmations of Israel's faith, and the importance of these should not be overlooked when assessing its relevance to Christian ethic and mission. Like the rest of the sabbatical provisions, the jubilee proclaimed the sovereignty of God over time and nature; and obedience to it would require submission to that sovereignty; hence the year is dubbed "holy," "a Sabbath to Yahweh," to be observed out of the "fear of Yahweh." Furthermore, observing the fallow year dimension would also require faith in God's providence as the one who could command blessing in the natural order. Additional motivation for the law is provided by repeated appeals to the knowledge of God's historical act of redemption, the Exodus and all it had meant for Israel. And to this historical dimension was added the cultic and "present" experience of forgiveness in the fact that the jubilee was proclaimed on the Day of Atonement. To know yourself forgiven by God was to issue in practical remission of debts and bondages for fellow Israelites. And, as we have seen, the inbuilt future hope of the literal jubilee blended with an eschatological hope of God's final restoration of humanity and nature to his original purpose. To apply the jubilee model, then, requires that people face the sovereignty of God, trust his providence, know his redemptive action, experience his atonement, practice his justice, and hope in his promise. The wholeness of the model embraces the Church's evangelistic mission, its personal and social ethics, and its future hope.

CHRISTOPHER J. H. WRIGHT

JUBILEES, BOOK OF. *Jubilees* presents itself as the account of a revelation which was disclosed to Moses on Mt. Sinai. After a prefatory chapter in which the Lord tells Moses in advance about Israel's apostasies and eventual repentance, the book takes the form of a first-person narrative recited by an "angel of the presence" whom the deity had instructed to tell Moses about everything "from the beginning of creation till My sanctuary has been built among them for all eternity" (1:27 [quotations from *Jubilees* are from Charles 1902]). The revelation proves to be a heavily edited rehearsal of the material from Genesis 1 to Exodus 20, all of which is encased in a chronology which divides time into units of 49 years (= jubilees), each of which consists of seven "weeks of years." The author does not include all of the biblical text, but he does follow the story line of Genesis–Exodus and often augments his base with additional details and at times with entirely new accounts (e.g., the war between Esau and Jacob [37:1–38:14]).

A. Texts and Titles

The commonly accepted theory about the textual evolution of *Jubilees* is that it was written in Hebrew, translated from Hebrew into Greek and possibly into Syriac, and rendered from Greek into Latin and Ethiopic. The Hebrew original and the Greek version were lost long ago; in fact, Western scholars had no text of the book until the 19th century, when Ethiopic and Latin copies first became available. Today, the entire text is preserved only in Ethiopic (the book enjoyed canonical status in the Abyssinian church); 27 copies of this granddaughter version have been identified to date. The Latin translation exists now in one manuscript (a palimpsest) which contains more than one-fourth of the text. The Greek version remains lost; only citations of it in some Greek and Latin writings from the patristic and Byzantine periods have survived. The Syriac version, if there ever was one, is visible presently only through 29 citations which have been found in an anonymous chronicle and which reproduce all, or more frequently parts, of about 137 verses. Fragments from 12 manuscripts of the original Hebrew version have been discovered among the Dead Sea Scrolls; nevertheless, only a few of these have been published. Though a fragment of another copy was reportedly found at Masada, this now appears not to be part of a Hebrew text of *Jubilees*.

The book received different names throughout its long textual journey. Its Hebrew title (if that is the proper word) is apparently given in CD 16:2–3, where it is cited and called "the book of the Divisions of the Times for Their Jubilees and Weeks." In Greek it circulated under several names: *Jubilees* (also attested in Syriac), the Little Genesis (seemingly the more common designation; the reason for the adjective is unknown), or, among other possibilities, the *Apocalypse of Moses*. The Ethiopic title is the same as the one in CD 16:2–3: the book of the Division(s) of the Times, or simply Division(s).

B. Date and Authorship

From the time that *Jubilees* became known in Europe until the end of the 19th century, scholars generally dated it to the 1st century C.E. The work of Bohn and Charles around the turn of the century led to a new agreement (apart from a few wildly divergent views, such as that of Zeitlin) that the book was composed at some point in the 2d century B.C.E. Bohn placed it in the middle of the century, Charles at the end. Since the discovery of the Dead Sea Scrolls and of fragments of *Jubilees* among them, the question of date has been approached from new angles. The paleographically determined date of some of the Hebrew fragments (4Qm 16 Jub^a and 4Qm 17 Jub^a) is ca. 100 B.C.E.—a date which virtually requires that one adopt an earlier time of composition than the one Charles defended. It seems clear that the book, which neither commands nor reflects separation from the remainder of the Jewish population but which manifests striking similarities with important teachings of the Scrolls, was written before the Qumran community was formed. There is no consensus about when this group exiled itself from the rest of the nation, but most scholars would now agree that the exodus to Qumran transpired during the high priestly tenure of either Jonathan (152–142) or Simon (142–134). This would imply that *Jubilees* was written no later than ca. 150–140 B.C.E. Several students of the book have found in it allusions to Maccabean wars; if they are correct, the book could not antedate ca. 166. However, others have argued that these allusions are open to other interpretations and that the apocalyptic passage in *Jubilees* 23 makes no reference to either the decrees of Antiochus IV forbidding the practice of Judaism (167) nor to the Maccabean response to these edicts. Nickelsburg and Goldstein have inferred from these circumstances that the book was written before 167. It should be added, though, that *Jubilees* 23 shares the standard opaqueness of apocalyptic language and that some passages in it have been interpreted by Charles and Davenport as references to the Maccabean uprising (e.g., v 20). Moreover, 4:19 may allude to *1 Enoch* 83–90, which was written, it seems, after ca. 164 B.C.E. In general one may say that the book was probably written at some point between 170 and 140.

There is strong reason to believe that *Jubilees* was written by a priest. This follows from the nature of the book with its heavy emphasis on priestly concerns, from the special attention devoted to the line of righteous men through whom the sacerdotal legislation was transmitted from earliest times, and from the extraordinary status of Levi among the sons of Jacob.

In addition to repeating and often expanding many passages which modern scholars assign to the priestly editor of the Pentateuch (e.g., creation according to Genesis 1, circumcision in Genesis 17), *Jubilees* adds numerous sections which betray the writer's priestly bent. Sections about sabbath laws, which appear in chaps. 2 (vv 1, 17–33)

and 50 (vv 6–13), form a kind of *inclusio* around the narratives of the book. The sacred calendar exercises the author frequently: it was revealed to Enoch (4:17–18); some features of it were clarified by the events of the Flood (6:23–38); and festivals were celebrated properly by the patriarchs on the exact dates for them (Weeks: 6:17–22; 15:1–2; 44:1–4; cf. 22:1–6; Tabernacles: 16:20–31; 32:4–7, 27–29; Unleavened Bread: 18:18–19; 49:22–23; Atonement: 34:18–19; for Passover, see 49:1–22a). The writer also deals regularly with sacrifices: Adam offered one upon leaving Eden (3:27); Enoch burns incense on the mount in Eden (4:25); Noah makes atonement for the earth (6:1–4; cf. 7:3–5; and Gen 8:20); Abraham provides extensive instructions about procedures and the woods which may be used in sacrifice (21:7–16); and the descriptions of festival celebrations include notices about the offerings presented (e.g., 15:1–2; 16:20–31). Among other priestly concerns, mention should be made of the prohibition of consuming blood (6:7–14 [cf. Gen 9:6]; 7:31–32; 21:6, 17–18); tithes (13:25–27; 32:2, 5, 8–15); circumcision (15:25–34; 20:3); separation of the holy race from the nations (22:16–18; 25:4–10; cf. 27:10; 30:6–16; see also 16:17–18; 22:12); and avoidance of impurity and uncleanness (e.g., 3:8–14; 6:37; 7:20–21; 11:17; 16:5–6; 20:3–7; 21:21–23; 22:16–23; 23:14, 17, 21; etc.). In view of all this, it comes as no surprise to learn that the descendants of Isaac are to become "a kingdom and priests and a holy nation" (16:18).

These and other priestly laws were transmitted in writing by a line of righteous heroes from earliest times. Enoch, who was the first to learn how to write (4:17), passed along teachings to Methuselah, who in turn transmitted them to Lamech, from whom Noah received them (7:38–39; the context deals with firstfruits and the year of release). Noah gave to his son Shem his book about medicines (a priestly domain) for combating the effects of the evil spirits (10:14). Later, Abraham learned to read the books of his fathers (12:27; cf. 21:10, where Enoch and Noah are mentioned), and he handed this lore to Jacob (12:27; cf. 21:10, where Enoch and Noah are mentioned), and he handed this lore to Jacob (39:6–7). Finally, the writer notes that Jacob gave all of his books and those of his ancestors to Levi "that he might preserve them and renew them for his children until this day" (45:16).

Levi, the third son of Jacob, lent his name to the tribe of Levites and thus was the titular ancestor of Israel's priests according to the Bible. Yet nothing is said there about his actually functioning as a priest. In *Jubilees*, however, Levi himself becomes the divinely ordained priest who begins serving in this capacity at an early age. In Gen 49:5–7 Jacob criticized Levi and Simeon for their massacre of the Shechemites, but the author of *Jubilees* claims that the two brothers were regarded as righteous for their act and that Levi's descendants were eternally chosen for the priesthood on the basis of what their ancestor had done in Shechem (30:17–20). When Jacob brought his sons Levi and Judah to see his aged parents, Isaac took Levi (the older of the two) by his right hand and blessed him first (31:12–17). He prophesied that he and his descendants would forever be priests, princes, judges, and chiefs of the nation, that they would teach, and bless, and eat at the divine table. Only later did Isaac bless Judah, whom he had taken by his left hand (vv 18–20). In chap. 32 Jacob is pictured as counting his sons backward and thus arriving at Levi as the tenth (he was the third oldest of the 12). To him there fell the "portion of the Lord, and his father clothed him in the garments of the priesthood and filled his hands" (i.e., he ordained him [32:3]). In this context, which speaks of tithing, one reads that Levi presided as priest at Bethel (v 9). Jacob, just before his death, delivered all of his books and those of his fathers to Levi (45:16).

This strong sacerdotal emphasis in the book probably reflects the office of the author, while the prominence of Levi mirrors the lofty status of the high priest in Second Temple Judaism. Students of the legal material in *Jubilees* have recognized that it does not correspond with the traditions of either the Pharisees or the Sadducees, but that it stands closer to what is known of Essene halakah. The Qumran literature has documented their thesis; the 364-day solar calendar is just one fundamental point on which *Jubilees* and the scrolls (including now the Temple Scroll) agree. It is likely, then, that the priestly author belonged to the movement that was later called Essene, whatever may have been its original name.

C. Theology

The first chapter of *Jubilees* places the narrative of chaps. 2–50 in a new context compared with Genesis–Exodus. The Lord, who reveals to Moses "the earlier and the later history of the division of all the days of the law and of the testimony" (1:4), informs him that he is to record the revelation "in a book in order that their generations may see how I have not forsaken them for all the evil which they have wrought in transgressing the covenant which I establish between Me and thee for their generations this day on Mt. Sinai. And thus it will come to pass when all these things come upon them, that they will recognise that I am more righteous than they in all their judgments and in all their actions, and they will recognise that I have been truly with them" (vv 5–6). The audience for whom the book is intended clearly lives long after Moses' time, and it must be convinced of divine fidelity and the urgency of maintaining the covenant. After Israel's apostasy in the land (vv 7–12) and subsequent captivity (vv 13–14) are predicted, the Lord informs Moses that the exiles will repent (v 15) and that he will shower his favors upon them—including the building of his eternal sanctuary among them (vv 16–18). Moses intercedes for the people unsuccessfully (vv 19–21), but God reiterates that only after confession of sin and repentance will a new time dawn—a time when they shall never again turn from the Lord (vv 22–25). Some future generation, presumably that of the author, must receive this message of God's faithfulness, Israel's infidelity, and the power of confession, repentance, and obedience to the covenantal stipulations to open a new day in the covenantal relationship between the Lord and his holy people.

One should view the author's eschatological teachings in the context of the Law and Israel's future. Israel, which had received the covenant, had failed to obey its stipulations (cf. 23:16, 19; 15:33–34; etc.). Both chaps. 1 and 23 survey the great difficulties which will beset the apostate nation because it has violated covenant and command; but both also point toward a change and the way in which it is

to be accomplished and picture the contours of a new, ideal age (for chap. 1, see above). Here again the legal focus is transparent. After depicting the punishments which Israel will endure (23:22–25), the author writes (v 26):

> And in those days the children will begin to study the laws,
> And to seek the commandments,
> And to return to the path of righteousness.

Then the span of human life, which had been shortened because of evil, will be lengthened until it approaches 1000 years. (vv 27–28)

> And all their days they will complete and live in peace and in joy,
> And there will be no Satan nor any evil destroyer;
> For all their days will be days of blessing and healing. (v 29)

The writer envisages neither a messiah (though Levi and Judah and their descendants are at the center of his interests [see especially 31:12–20]) nor a resurrection of the dead. A messiah is never mentioned, and the phrase "rise up" in 23:30 almost certainly has a different meaning in its context. Rather, of the departed righteous the author says:

> And their bones will rest in the earth,
> And their spirits will have much joy. (v 31ab)

But of those who will live in the new age he writes: "And their souls will cleave to Me and to all My commandments, and they will fulfil My commandments, and I shall be their Father and they will be My children" (1:24). At that time the Lord will live forever with Israel in his sanctuary on Mt. Zion (1:17, 27–29; cf. 4:26).

The author's teachings about the centrality of the Law and its importance for the future also allow one to place in context his practice of founding essential legal practices in the time of the ancients of Genesis rather than in the age of Moses. For example, the different periods of impurity for a woman after bearing a male or female child are based on the time Adam and Eve spent outside the Garden before being led into it (3:8–14; see Lev 12:2–5). The lex talionis harks back to Cain, who killed Abel with a stone and was himself killed by one when his house collapsed on him (4:31–32; cf. Exod 21:24; Lev 24:19–20; Deut 19:21). Noah first celebrated the Festival of Weeks (see 6:17–22) and later Abraham, too, observed this holiday, which became the anniversary of the Noahic, Abrahamic, and Mosaic covenants (6:17–22; 15:1–2). The Festivals of Tabernacles (16:20–23; 32:4–9, 27–29) and Unleavened Bread (18:18–19) and the Day of Atonement (34:17–19, which commemorates Jacob's torment on learning of Joseph's "death") also were introduced in the age of the fathers. The author's reason for antedating these practices can only be surmised, but it is clear that he wished to impress upon his audience that these essential acts of obedience to the covenant were not the innovations of a later age that were imposed upon the religion of the patriarchs. They had been in force since earliest times, were inscribed immutably and eternally on the heavenly tablets (of the numerous cases, see, for example, 3:10, 31; 6:17; 15:25; 16:28–29; etc.), and in some instances were practiced in heaven (Sabbath [2:30]; Festival of Weeks [6:18]; circumcision [15:27]). These provisions were to be observed scrupulously in the present if the ideal future was to be realized.

JAMES C. VANDERKAM

JUCAL (PERSON) [Heb *yûkal*]. See JEHUCAL (PERSON).

JUDAH (PERSON) [Heb *yĕhûdâ*]. The name of several individuals mentioned in the Bible.

1. The fourth son of Jacob and eponymous ancestor of the tribe of Judah. See JUDAH (PLACE).

2. A Levite in the postexilic period, an ancestor of Kadmiel, who heads one of three families charged with the oversight of the rebuilding and repairing of the temple (Ezra 3:9). Evidently Judah represents a leading family,

for his family and offspring supervised this momentous reconstruction project. The term "workmen" (RSV, i.e., those whom Judah's family supervised), may refer either to the levitical foremen or to the common laborers. The "work" which is supervised represents the Heb word *mĕlāʾkâ* rather than *ʿăbōdâ*. It has been convincingly demonstrated that *mĕlāʾkâ* refers expressly to an enterprise calling for skill and workmanship, while *ʿăbōdâ* refers to raw or unskilled labor (Milgrom 1970). It is thus an appropriate term to use to describe a project as sacred and demanding such dexterity as temple repairs.

A problem appears when Ezra 3:9 is compared with Ezra 2:40. In the latter, Kadmiel is listed as one of the two branches of the family of Hodaviah (or Hodevah in Neh 7:43), not of Judah as in 3:9. This suggests that Hodaviah/Hodevah and Judah are probably the same person. While the meaning of "Judah" still remains uncertain, that of "Hodaviah" appears quite transparent—"Give praise/thanks to Yahweh." Nevertheless, "Judah" more than likely has some connection with the Heb verb *yādâ* (*Hipʿil*, "give thanks," "praise"), as Hodaviah clearly has. Given then that both names are built from the same verb, it is quite possible that Hodaviah is the more correct of the two, but that the more familiar "Judah" slipped into the text.

It is not uncommon for a Hebrew name to be borne by several persons throughout the OT. Surprisingly, the names of Abraham, Isaac, and Jacob appear only in connection with the patriarchs. No father or mother named a son after one of these legends, as we do with a George Washington Carver or a Martin Luther King. It is with the fourth generation of the patriarchs, Judah, that others bear a patriarchal name; and all are in the postexilic period; and most are Levites. If the name has something to do with praise or giving thanks, it is an appropriate one to have, given the release by Cyrus, the return to Canaan, the rebuilding of the temple, and the opportunity of a fresh start.

3. One of ten Levites who during the postexilic period had taken a foreign wife and at the urging of Ezra divorced her (Ezra 10:23, LXX *Iodom/Ioydas*). Nothing is said here of what happened to his foreign wife and other divorcées after the divorces were finalized. In addition to Judah, other culprits with ancient names guilty of indiscreet marriages include a Benjamin in v 32 and an Amram in v 34.

It is interesting that Ezra 10:13 identifies the ceremony of marriage dissolution as a "work" (*mĕlāʾkâ*), the same word used for the work on the temple (see above). This is clearly a temporary project, but the nuance of "skilled" work is palpably absent this time.

4. One of the Benjaminites (maybe) who lived in Jerusalem in the days of Nehemiah and whose father's name was Hassenuah (Neh 11:9). His office was that of "second over the city." His colleague, Joel, was chief administrator of the city. It is not totally clear whether or not these two were also Benjaminites (as are those named in vv 7–8). Perhaps they were Judeans. Would two Benjaminites occupy the two top administrative positions in rebuilt Jerusalem?

His father's name—Hassenuah—is interesting. It means "the hated/unloved one" if one allows the interchangeability of the sibilants *śin* and *samek* (cf. Gen 29:31, Leah was "hated" [*śĕnûʾâ*]). On the other hand, Ezra 2:35 mentions the large family (3630) of Senaah [a place name?]; and this may be the origin of Hassenuah.

5. A Levite who, along with seven other Levites, returned with Zerubbabel from Exile (Neh 12:8). More than likely he is the same as the Hodaviah of Ezra 2:40 (or the Judah of Ezra 3:9). See #2 above.

6. Prince of Judah who took part in the dedication of the wall of Jerusalem (Neh 12:34). However, it is possible that the seven names listed in Neh 12:33–34 (of which our Judah is one) are in fact priests and not laity. One reason for opting for this is that v 41 lists seven priests who accompanied the other half of the twin procession. Thus the seven names of vv 33–34 balance the seven names of v 41 (and these latter are clearly sacerdotal people).

7. Priest and a musician who took part in the dedication of the wall of Jerusalem, specifically in the processional embrace of the city and its walls (Neh 12:36). He is possibly a descendant of the Levite musician mentioned in #5.

VICTOR P. HAMILTON

8. The father of Simeon and son of Joseph (not the "supposed father" of Jesus) according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:30). Judah is omitted in D, which substitutes a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. Apart from the patriarch Judah mentioned in Luke 3:33, this name appears in a list of 18 otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 501). Although Jeremias (1969: 296) believes that it is anachronistic for Luke to include this name here, since it first appears as a personal name in the postexilic period (e.g., Ezra 3:9; 10:23; Neh 11:9), caution must be exercised in light of the limited nature of the available evidence. Kuhn (1923: 208–9) argues that two seemingly parallel lists of names—Luke 3:23–26 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha)—were originally identical, the first perhaps reflecting a Hebrew context and the second, in an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). Judah (Gk *Iouda*), in the second list, corresponds to Jannai, in the first list. With no textual variants for either name to support confusion of the two, Kuhn's theory has little plausibility.

STANLEY E. PORTER

JUDAH (PLACE) [Heb *yĕhûdâ*]. Var. JUDEA. The name of an Israelite tribe in S Cisjordan, as well as the name of the territory associated with that tribe and the name of the kingdom that, after the death of Solomon, controlled that territory. See also JUDAH, HILL COUNTRY OF.

A. Judah, Son of Jacob

The eponym of the tribe of Judah was born to Jacob as his fourth son by his wife Leah (Gen 29:35). In Akkadian sources we find the name forms *ya-á-du, ya-a-ḫu-du* and *ya-ku-du*. This is similar to the *yĕhûd* or *yahûd* from the Persian period. An inscription found in a rock-cut tomb in W Judah, that most probably dates back to the 7th or 6th century B.C.E., has *hry yhd*, "the mountains of Judah." On Arad Ostracon 40 the text is unfortunately damaged after *yĕhûd* (l.13); it is therefore not certain that *-āh* followed, as is often assumed.

Both the etymology and the original meaning are disputed. There is, however, a growing consensus that the original meaning was geographic: Mt. Judah. Compare expressions such as *ʾereṣ yĕhûdâ* (Amos 7:12), *midbar yĕhûdâ* (Judg 1:16), *negeb yĕhûdâ* (1 Sam 27:10). Consequently, the main tribe of this area was called after its territory. The last step was the name *yĕhûdâ* as the name of a state.

Apart from the eponym, the use of *yĕhûdâ* as a personal name seems to be postexilic. It is a striking fact that a name *yĕhûdâ* until now has not been found among the hundreds of extrabiblical personal names discovered on ostraca and seals. This could speak in favor of Lipínski's hypothesis that the name is related to Arabic *wahda/yahda*, "ravine"/"canyon." But a derivation of the root *yhd (Hopʿal)* is more probable, as was suggested by W. F. Albright as early as 1927. This was recently defended again by A. R. Millard (1974). The ending *-āh* could be a shortening of a theophoric element (see *TPNAH*, 165).

B. The Place of Judah in the System of Twelve Tribes

There is not one system of twelve tribes in the OT, but two. See GAD (PERSON). Judah has a prominent place in both systems. But this is also due to the fact that both systems follow an ancient tradition of border description: starting in the SE and moving clockwise. This tradition is already found in the old border description of Canaan (cf. Num 34:1–12).

Already in the last century many historians found the appearance of Judah in the twelve-tribe system suspicious. The old Song of Deborah (Judges 5) does not mention a tribe of Judah. This tribe is not even blamed for its absence. This must mean that the author did not even expect Judeans to fight with "all-Israel" in this very important battle. The questions arose whether Judah was a part of premonarchic "Israel," or whether there was a tribe of Judah at all before the time of David (for the history of this discussion see de Geus 1976: chap. 1). In general there were and still are the following possibilities.

1. A tribe of Judah never existed. "Judah" was the name of the state that was created by David in the mountains of Judah (territory). It consisted from the start of several different groups. Hebron was the center of this state.

2.a. There did exist a "Judah" in the time of the judges. But it was rather a "Greater Judah"; from the start it was a confederation of several different groups. German scholars like Noth spoke of a S six-tribe amphictyony around Hebron, consisting of Judah, Simeon, Levi, Calebites, Kenites, and Jerahmeelites. This S confederation originally had nothing to do with the N amphictyony, called "Israel." Only after David became king also over the N tribes did Judah (with Levi and Simeon) become included in the system. Some even thought that the twelve-tribe system was especially created to defend the admission of the S groups into "Israel."

2.b. There did indeed exist a Greater Judah in the S. But this Judah was completely independent of the N. At the same time, however, the S and the much larger N group had so much in common that they considered each other as brothers (cf. 2 Sam 19:40–44).

3. There existed during the period of the judges an "Israel" of which also the S tribes Judah, Simeon, and Levi (but not the other three) were always a part. The separate developments in the N and in the S are to be explained from the geographic isolation of the S groups.

When trying to reconstruct the early history of the tribe of Judah, one should remember three important facts. The first is that later sources describe former Judah with the later state of Judah in mind. The second is that our most important source for premonarchic Israel, the book of Judges, has in general a N outlook. The role of Judah in Judges is only marginal. But this does not mean that Judah did not exist. The third fact is the geographic isolation of the S tribes because of the Hivite-Jebusite enclaves along the line Gezer-Jerusalem. Jerusalem was only integrated into Israel by David, and Gezer became Israelite as a gift from pharaoh to Solomon (1 Kgs 9:16).

C. Settlement

Until very recently the prevailing opinion among OT scholars was that the tribe of Judah had been far more successful in its settlement than the N tribes. The fact that we find hardly any settlement traditions about Judah should mean that this was a peaceful process in the S, without any great conflicts like those that were "remembered" much later (Auld 1975: 285; de Vaux 1970: 125). As a result of this absence of great conflicts, the relations of the ancient Judeans with the peoples surrounding them were much more relaxed than was the case in the N. Compare the case in which a Bethlehemite family sought refuge in Moab, and the way the Moabite Ruth was absorbed, or the relations with the Philistines in the time of Samson. Even the eponym of the tribe sees no objection to marrying a Canaanite woman (Gen 38:2). His friend Hirah from Adullam, too, is often considered as being a Canaanite. Also the cooperation with other groups, some of them non-Israelites, such as Kenites and Calebites, illustrates this typical Judean quality. In 1 Samuel 25 we hear of the Calebite Nabal, who has his business among Judeans but who lives in his own Calebite village of Maon.

Literary research has long been undecided as to whether the settlement of the Judeans (with the Simeonites) occurred from the S and was therefore separate from that of the N tribes, or whether for Judah and other tribes the movement was from N to S, with Judah being part of a greater movement. Memories of a settlement from the S are the originally Simeonite and Calebite traditions about Hormah, Hebron, and Arad (Numbers 13–14, 20; Joshua 14–15; Judges 1). Hesitatingly de Vaux (1970: 131) concludes that it is more probable that all six groups that were to form Greater Judah came from the S. This, of course, is consistent with the first possibility mentioned above.

Judges 1, on the other hand, tells us how Judah and Simeon set off to conquer their inheritance from the N.

This relies on the N location of Bezek (Judg 1:4) and its identification with Khirbet Ibziq (M.R. 187197). In all traditions Judah is closely connected with Simeon. In Genesis 34 we find a connection between Simeon and Levi with Shechem. Another argument for the N origin of Judah is that one of their leading clans, that of Ephrath, came from the N. Ephrath settled in or around Bethlehem (de Vaux 1970; Demsky 1986–87). Such a N origin for the Judeans is more consistent with possibility 3, and to a lesser degree, with possibility 2.b.

Modern archaeological research has eliminated two of the three popular "models" for the Israelite settlement (Lemche 1985; Finkelstein *AIS*). The first model, that of a military conquest by intruding foreign tribes, finds no archaeological support whatever. The second, of a revolt of peasants and slaves against the Canaanite LB city-states, is at least very improbable for Judah: there were very few LB towns. The only towns that existed at the end of the LB were Tell Beit Mirsim, Debir (= Khirbet Rabud), and Jerusalem. Bethlehem existed in the Amarna Age, as "a town in the land of Jerusalem" (EA 290). During the 14th or 13th century it became uninhabited. Hebron also existed in the Amarna Age as a residence of a chieftain. But also here we have to suppose a hiatus in habitation at the end of the LB. (Other possibilities of LB towns that continue into the Early Iron Age are Beth-zur and Khirbet Jedur [*AIS*, 52].) This leaves at the moment only the third model, that of gradual sedentarization involving only smaller and local conflicts with indigenous pastoral groups (*AIS*, 351; de Geus 1976; 164–71). Archaeological research has also shown that there were only very few Iron Age I sites in Judah. Up until now intensive surveys have resulted in only ten such sites (*AIS*, 353). And the material culture of these sites is best explained from the N, where Iron Age I settlement was much denser. See MANASSEH (PLACE). Therefore it seems certain that the Iron Age settlers, who were to become the tribe of Judah, were emigrants from the central Ephraimite hills. The above mentioned "wedge" of Hivite and Canaanite towns separated them from their N kinsmen at the time when they became fully sedentary. A separate development in the material culture, especially in ceramics, between N and S becomes visible early in the Iron Age I. Also this testifies to the isolation of the S groups.

D. Territory

The core of the Judahite territory was the mountain ridge between Bethlehem and Hebron. In the N the territory was confined by the Benjaminites and the possessions of the Jebusites. To the E lay the desert of Judah. In the S, around Hebron and toward the desert of the Negeb, lay the territories of allied groups. We know almost nothing about the extension of the tribal territory to the W. One can suspect that any expansion went in that direction and that this brought about the conflicts with the Philistines. In the 11th century B.C. the Philistines were involved in a process of expansion to the E and NE. There are possibly some indications for a Judean expansion toward the NW (Miller and Hayes *HAIJ*, 106). The OT gives us no information on the original tribal area of Judah. No tribal borders are given. The border description we find now in Joshua 15 is in fact a part of the old border description of Canaan. The N border is simply the S border of Benjamin in reversed order. The town list of Josh 15:21–62 contains a document from the later Monarchy (Aharoni *LBHG*, 87, 248–53, 347).

E. Greater Judah

An essential feature of all old traditions about the tribe of Judah is that the tribe rarely operated alone. It was probably too small to do so. From the earliest times it cooperated with Simeon. For later generations these two tribes were regarded more or less as one and the same tribe. Most of the villages assigned to Simeon are also assigned to Judah. And all of them are situated within the boundaries designated for Judah (*HAIJ*, 103). Calebites, Othnielites, Kenites, Jerahmielites, and possibly Levites were also confederates of the Judeans. Thanks to the analysis of 1 Sam 30:27–31 by Zobel (1975: 253–77) we know more about this ancient confederation. In view of the unimportant settlement period of the Judeans, one suspects that this confederation around Hebron already existed when the Judeans (and Simeonites?) joined it. Zobel showed convincingly that this confederation was not the work of David himself. It existed before him. We do not know what brought these groups together. Was it the continuing importance of Hebron as cultic center of the S? Or do we have to think of a more or less automatic development into larger units as a result of population expansion and increasing production? Did Hebron, as the central marketplace, in this way become the center of an early state? Or do we have to reckon with external factors? Outside pressure could have come from the Philistines; but one could also think of the Amalekites, who seem to have been the most important threat in earlier times.

JUDAH THE MACCABEE. See JUDAS MACCABEUS (PERSON).

JUDAH THE PRINCE, RABBI.

Rabbinic leader and patriarch (*nāśî'*) during the late 2d century C.E. Judah's great accomplishment was to consolidate the hegemony of the rabbinic movement—with the patriarch at its head—over the organized Jewish community of Palestine. His patriarchate represents the end of all challenge to his family's right to that office; and during his lifetime the descent of the patriarchal dynasty from Hillel the Elder was finally accepted as historical fact (see Levi 1895); at his death, Judah explicitly bequeathed the title of *nāśî'* to one of his sons (*b. Ketub.* 103b).

Judah's success is reflected in the numerous legends that make him the intimate personal friend of the Roman emperor, always called Antoninus in these stories but in fact (if there is any historical kernel to them at all) probably one of the Severan dynasty. His wealth also was legendary (*b. B. Meṣ.* 85a), and one of his strategies for achieving political stabilization after the wars of the previous century was to bring about an alliance between the patriarchate and the remaining wealthy Jewish families of the land. This strategy provoked resentment (*b. Erub.* 86a), some of which was directed at his own uneducated sons-in-law (*j. Moʿed Qaṭ.* 3.1, 81c; *b. Ned.* 51a), but achieved success when the Roman authorities confirmed patriarchal control over the autonomous Jewish judiciary in Palestine (see Alon 1977: 401–2, 411–12, 428–29). Judah's relationship with the Roman authorities is also reflected in several legal innovations attempted by him that would have had the effect of softening continued Jewish hatred of Rome for having destroyed Jerusalem and its temple. Into this category can be placed Judah's proposal to eliminate the annual fast commemorating the destruction (*b. Meg.* 5b) and possibly as well his willingness to exempt several important centers outside Judea proper from the obligation to tithe agricultural produce (*j. Dem.* 2.1 22c; *b. Ḥul.* 6b). In the latter case Judah is reported to have defended his action with the claim that every generation's leadership is expected to institute some alteration in the received tradition. During Judah's lifetime the practice of dividing leadership over the rabbinate among several individuals was apparently temporarily suspended; and after his death his successors retained the power to grant rabbinic ordination, a power previously held by all rabbis with respect to their own disciples (*j. Sanh.* 1.2 19a). In the end Judah was remembered as the first since Moses who had "combined Torah and [political] greatness in one place" (*b. Giṭ.* 59a; see also *t. Sanh.* 11.8).

Judah's best-known achievement is that the Mishnah was compiled under his leadership and then circulated under his name. There is no consensus among modern scholars as to the intended function of the Mishnah, the actual method by which it was put together, or Judah's own role in this process (see Neusner 1973); but this text resembling a kind of legal syllabus rapidly became the main focus of rabbinic study of oral Torah both in Israel and in Babylonia; and the Talmud which eventually emerged as the fundamental document of rabbinic Judaism took the form of an elaborate commentary on the Mishnah.

ROBERT GOLDENBERG

JUDAH, ADMINISTRATION OF (POSTEXILE). See PALESTINE, ADMINISTRATION OF (POSTEXILIC JUDEAN OFFICIALS).

JUDAH, HILL COUNTRY OF (PLACE)

[Heb *har yĕhûdâ*]. Named by association with the territory allotted to the tribe whose eponymous ancestor was Judah, the fourth son of Jacob and Leah (Gen 29:35; 49:2–4, 8–12).

The hill country of Judah formed the core of what at first was a tribal territory, then in the time of David a state the capital of which was at Hebron, and again after the civil war between Rehoboam and Jeroboam and later the province of a foreign government. The hill country of Judah is located in the S part of the mountain ridge which extends from the Jezreel valley in the N to the Negeb. The expression "hill country of Judah" is used only twice in the Bible: Josh 21:11 and Luke 1:65. However, the physical setting is well understood. Judah is situated S of a line drawn due W from the N shore of the Dead Sea to the Mediterranean. As distinct from the Wilderness of Judah and the Shephelah, the hill country encompasses approximately 250 square miles (ca. 640 km²)—slightly less than the land area of New York City.

The S border of the tribal territory of Judah is described in Josh 15:1–5 as extending S from the Dead Sea to the Wilderness of Zin, then turning W to a point S of Kadesh-Barnea, then curving NW to the brook of Egypt (Wâdī el-Arish) and the Mediterranean. On the E Judah is bounded by the Dead Sea, and on the W, the Mediterranean. On the N Judah shares a border with Benjamin (NE) and Dan (NW) (Josh 15:5–12; cf. 18:11–20).

The hill country of Judah is caused by an arching of the earth's crust (anticline) in which the hard Cenomanian

limestone is exposed along the top of the ridge and the W slopes of the arch. The ridge of the Judean arch lies roughly NNE by SSW, paralleling the Mediterranean shore and reaching an elevation of ca. 3350 feet at Hebron; Jerusalem is at ca. 2700 feet. This hard limestone is bedded in layers which create natural terracing and which erode into deep v-shaped canyons. This limestone weathers to form a rich, fertile, reddish soil called terra rossa, which is excellent for vineyards and fruit trees (esp. olive and almond). This is the land of terraced farming.

The hill country presently receives 16″–30″ (400mm–750mm) annual rainfall depending on location. As weather patterns move in from the W over the Mediterranean and drop most of their precipitation on the W side of the ridge, the runoff water has eroded deep v-shaped canyons into the hard-bedded limestone as it flows from the watershed back toward the Mediterranean Sea. Topography seems to have made the area somewhat "closed" and provincial. The deep E-W canyons make travel from N to S in Judah most difficult if not impossible except along the ridge. These canyons also make it very difficult to ascend into the hill country from the coastal plain to the W, thereby providing some measure of protection for the people in the hill country as well as causing a degree of isolation in certain periods of history. To the W at ca. 1050 feet a relatively thin layer of soft Senonian chalk is exposed, having been weathered into a narrow "chalk moat" lying virtually N-S and providing a natural line of communication as well as separating the hill country of Judah from the Shephelah or foot hills to the W. The Shephelah provided a natural buffer between the wide-open coastal plain and the hill country of Judah. To the E lies the Wilderness of Judah.

PAUL WAYNE FERRIS JR.

JUDAH, WILDERNESS OF (PLACE) [Heb *midbar yĕhûdâ*]. The Wilderness of Judah is an area roughly 10 miles (16 km) wide by 30 miles (50 km) long located E of a line rising out of the Jordan valley from the Wâdī Auja, ca. 4.5 miles (7km) N of Jericho, passing within a half mile to the E of Jerusalem and Bethlehem. The specific name Wilderness of Judah is used only twice in biblical narrative (Judg 1:16; Matt 3:1) and once in the title of a psalm (Ps 63). Most commonly it is simply referred to as "the wilderness." The Wilderness of Judah is bounded on the E by the Dead Sea and the sheer cliffs jutting up to 1300 feet (400 m), delimiting the Rift valley; on the N by the hill country of Ephraim; on the S by the Negeb; and on the W by the rather visible demarcation between the hard Cenomanian limestone of the hill country of Judah and the softer Senonian chalk of the Wilderness of Judah.

The Wilderness of Judah makes up the E slope of the Judean arch. Its soft Senonian chalky limestone and clay weathers into a light brown, less fertile rendzina soil, which will support grasses and grains when there is sufficient moisture. Situated on the lee side of the central hill country, the Wilderness of Judah receives only 4″–12″ (100 mm–300 mm) annual rainfall, far less than locations only a few thousand yards to the W.

Although the soft chalky limestone erodes into more rolling terrain, and because it erodes more easily, the wadis cut through into the underlying hard Cenomanian limestone and form deep E-W canyons as they cut their way E to the Rift valley below. This makes N-S travel in the Wilderness of Judah as impossible as it is on the W of the Judean arch.

Because it is on the edge of the arable land, this is the "pasture" land where shepherds graze their flocks and herds. The scarcity of water, the meager fertility, and the difficulty of travel combine to make the Wilderness of Judah a place of severity and testing and a place of refuge (e.g., 1 Sam 22:4; 23:29; 24:1, 22; cf. Psalm 57; 2 Samuel 15–16; Psalm 63; Jeremiah 9; Matthew 3–4; *JW* 6.326, 351, 366). It also figures significantly in prophetic imagery (e.g., Isa 32:15–16; 35; 40). It was to the Wilderness of Judah that John the Baptist had withdrawn, preaching the gospel of the kingdom (Matthew 3), when he introduced Jesus' public ministry. It was in the Wilderness of Judah that Jesus faced his threefold temptation (Matthew 4). It was to the Wilderness of Judah that many of the early Church retired to a hermitic or monastic pursuit of holiness.

PAUL WAYNE FERRIS JR.

JUDAISM. This entry consists of 7 articles surveying Judaism from the time of the Babylonian exile (586 B.C.E.) to the Mishnaic period and beyond (ca. 3d century C.E.). The 1st article provides a broad survey of the diversity of Judaisms that flourished in the Greco-Roman period, both in Palestine and throughout the larger Mediterranean world. The 2d article focuses particularly on diverse forms of Judaism within Palestine. The 3d and 4th articles respectively survey Judaism in Egypt and North Africa, while the 5th examines Judaism in the ancient city of Rome. The 6th article covers Judaism in Babylonia, while the 7th surveys Judaism in the Mishnaic period.

JUDAISM IN THE GRECO-ROMAN PERIOD

The purpose of this article is to provide an overview of Judaism in the period between 63 B.C.E. and 200 C.E.

A. Introduction
B. The Temple

O. The LXX and the Role of Scripture

A. Introduction

During the decade of the 1980s the study of early Judaism reached a watershed. The longstanding assumption that Jewish religious belief and practice were largely uniform and consistent throughout the ancient Mediterranean was abandoned. The evidence of archaeology, particularly synagogue art, made untenable George Foot Moore's notion of rabbinic Judaism as "normative Judaism"—the dominant and legitimate form of Jewish religion—against which variants could be judged inauthentic or heretical. When studied critically and inductively, the major written sources—Ben Sira, the Apocrypha and Pseudepigrapha, the works of Josephus and of Philo, the Dead Sea Scrolls, and the Mishna—appeared to reinforce one another only very generally and sometimes very little. It became clear that no single set of data, either from literature or archaeology, could characterize the varied expressions of Jewish religious life and belief in the ancient world. The consensus that Jewish religion from ca. 330 B.C.E. to 200 C.E. exhibited an "almost unlimited diversity and variety" (Kraft and Nickelsburg 1986: 2) found full expression in the model of multiple Judaisms, each representing a discrete system and program. The aim of this entry is to describe important aspects of this diversity.

The model of multiple Judaisms depicts them as distinct but not disparate. It suggests that they are too divergent to be seen as simply variations of a single pattern. Rather, like offspring from the same parents, the different Judaisms possess aspects of a common legacy, but not necessarily the same aspects, or in the same way, or in the same proportion. For example, Jewish writings from both Palestine and the diaspora exhibit diverse understandings of common religious rituals and concepts. Even so basic a rite as circumcision is used and interpreted differently in the Hebrew Bible, Paul, 1 Maccabees, Josephus, and Philo (Smith 1982). Likewise, the concept of the messiah, long thought essential to all forms of Jewish religion, is in fact employed only in some texts of this period and then inconsistently (Neusner, et al. 1987). These examples illustrate the complexity of the data and justify the model of multiple Judaisms.

Because it attempts to preserve diversity and avoid harmonization, the model of multiple Judaisms raises anew the problems of definition and classification. The model requires a theoretical framework that justifies classifying the varied Judaisms together, that explains their commonalities. But that framework cannot suppress the differences between and among the Judaisms, and it must supply the means to separate one Judaism from another. The framework for multiple Judaisms must simultaneously distinguish Judaism from not-Judaism and avoid collapsing the diverse Judaisms to a single Judaism.

For these purposes, two standard ways of defining early Judaism will not serve. The conventional theological definition, which presents Judaism as essentially a religion of covenant-maintenance with Yahweh, who is understood to be the one real god, is too monolithic to capture adequately the diversity the model proposes. The standard ethnic definition—which presents Judaism as the religious behavior of all groups identified, by themselves or by others, as Jews—fails to supply any larger category at all.

Constructing an appropriate framework within which to situate the diverse Judaisms is complicated by the character of the data. A proper definition of any Judaism should describe "a worldview and a way of life that together come to expression in the social world of a group of Jews" (Neusner et al. 1987: ix). Despite recent archaeological discoveries, particularly in the state of Israel, most of the evidence for ancient Jewish religious life is literary. Although most Jewish documents illustrate a worldview and recommend at least aspects of a way of life, the relationships of the texts to concrete social groups is neither clear nor certain. For example, the collective character of the Mishna suggests that a specific community stands behind it and was shaped by it. But the same cannot be said for all the Jewish writings of the Greco-Roman period. For instance, the mere presence of a document at Qumran does not tell how it was regarded by the Dead Sea community. The problem is even more acute with anonymous or pseudepigraphic works and those authored by individuals. It often is impossible to show that the worldview and way of life promulgated by an important Jewish text ever affected a group of Jews. Thus, description of the varied Judaisms of the ancient Mediterranean is necessarily partial, and much of it is limited to worldview.

Moreover, the conventional challenges of literary evidence to any historical research apply fully to the study of early Judaism. No author is disinterested, and separating a text's biases and interests from the historical information it supplies is never simple. Flavius Josephus has reasons for presenting Jewish religion as he does, and in some instances scholarship is unable to penetrate beneath them. Likewise, on the basis of its redaction, the Mishna can only be supposed to supply a highly particular 3d century perspective on 1st century Palestinian Jewish religion.

Although the multiplicity of Judaisms emerges clearly in the Hellenistic period and obviously was accelerated by the impact of Hellenistic culture, the ingredients of these divisions are already evident in the Persian period. The transformation of Israelite religion caused by the destruction of Jerusalem in 587 B.C., the cessation of the sacrificial cult, and the Babylonian Exile supplies the contours of the larger Judaic framework within which the various Judaisms developed.

That framework consists of 4 components: (1) the Temple, (2) Israelite scripture, (3) nonscriptural or extrascriptural tradition, and (4) apocalypticism. These components are all, to some degree, scholarly constructions, but each, except apocalypticism, corresponds to a category or term in the written sources themselves. All the Judaisms of the Greco-Roman period drew on a transformed Israelite legacy comprised of these 4 components. But they did not draw on it in the same way nor from each of the 4 in equal measure, nor in most cases even from all of them. Each Judaism can be analytically described and distinguished from others in terms of these components.

In reality, of course, none of these components existed in isolation. Indeed, all, in different ways, are implicated in one another. Moreover, each of them, if taken as the final locus of authority of a Judaism, has the capacity to absorb or even nullify the other 3 components. For instance, an apocalyptic Judaism could, and did, negate the importance of the Temple and levitical conduct; and a Judaism based on a levitical tradition, as was early rabbin-

ism, could surpass the meaning of scripture's words and suppress the supernaturalism and eschatology of apocalyptic speculation.

It also is important to note that the components *temple, scripture,* and *tradition* are empty categories that were filled in differently by different Judaisms. In some Judaisms the temple was a concrete reality; for others it was a metaphor or an idealization. Likewise scripture. It is not only that different Judaisms focused on different parts of scripture or interpreted the same parts in conflicting ways. Rather, there was no single scripture that all Judaisms employed. Greek-speaking Jews, primarily but not exclusively in the diaspora, rarely resorted to a Hebrew text but instead used the Septuagint (LXX). Although the LXX was known to be a translation, the Judaisms that used it accorded it the de facto status of an original; as in the case of Paul and Philo, they used its language, syntax, etc. as the basis of interpretation. The *Letter of Aristeas* legitimated the status of the LXX with the suggestion that it was divinely inspired. By contrast, in Rabbinic Judaism the Targums—translations of the Hebrew Bible into Aramaic (usually dated after 200)—were always treated as interpretations, never as scripture. Hence, different Judaisms not only read scripture differently; textually and linguistically, they read different scriptures.

The component of nonscriptural or extrascriptural tradition also varied from Judaism to Judaism. Some Judaisms appear to have been heirs to distinctive levitical traditions that supplemented and complemented, but sometimes contradicted, scripture. Others drew on nonscriptural versions of scriptural materials, which made minor biblical figures and themes objects of great interest.

This article examines the nature of the diverse early Judaisms in three ways. First it examines one major component of the larger framework, the Temple, to illustrate the varied ways it was understood and appropriated in different Judaisms of the period (see B. below). Next it reviews the data about the major Judaisms of this period both within Israel and in the diaspora, with a brief excursus on Josephus, a key source for many of them (see C.-L. below). In the last 3 sections (M.-O.) it briefly considers some of the varieties of the treatment of scripture and scriptural traditions.

B. The Temple

The Temple in Jerusalem was a central feature for a number of Judaisms in the Greco-Roman period. Following the return to Jerusalem from exile in Babylon (ca. 535 B.C.E.), the Temple was rebuilt under Zerubbabel. Cyrus, the king of Persia, had both encouraged the rebuilding of the Temple and provided funds for the construction (Josephus, *Ant* 11.1–3). The Temple was rebuilt once again and expanded under King Herod toward the end of the 1st century B.C.E. The importance of the Temple for the Jewish people and for certain Judaisms can be seen not only in this persistence in maintaining and rebuilding the Temple, but also in the prominent place the Temple holds in the Jewish literature of the Greco-Roman period.

The Temple was the symbolic center for a number of Judaisms until after its destruction by the Romans in 70 C.E. Even in the Mishna, the first collection of writings produced by rabbinic Judaism (edited ca. 200 C.E.), the Temple, though destroyed, continued as an essential, symbolic institution and structure for that Judaism. The desecrations of the Temple under Antiochus Epiphanes (165 B.C.E.) and under Pompey (65 B.C.E.) are recorded respectively, in the book of Daniel and the *Psalms of Solomon.* Offenses against the Temple contributed to Jewish revolts against foreign domination in the case of the Maccabean revolt (165 B.C.E.), the first revolt against Rome in 66 C.E., and the Bar Kokhba rebellion of 133 C.E.

1. The Temple in Palestinian Judaisms Before 70 C.E. The Temple in Jerusalem was the most prominent institution in Judea. As the center of the cult of Yahweh and the seat of native Jewish, as opposed to Roman, rule, it represented both the forgiveness of sins and the hope for national sovereignty. Its grandeur and massive size suggest that considerable resources were required for its maintenance, which evidently was a national priority (Strange, *ANRW* 2/19/1: 655). Despite the Temple's imposing physical presence and undeniable cultural centrality, most of the surviving written evidence reflects the views of its critics rather than of the Judaism represented by its personnel and administration.

Differences of opinion about how the Temple should be run and who should perform the cultic rites are important factors in distinguishing the various Palestinian Judaisms from one another. For example, the Temple was an essential feature of the religion of the Qumran community. The rank or order (Heb *serek*) of the community members was organized according to levels of purity or holiness which approximated those of the Temple in Jerusalem. In its organization and self-understanding, Qumran replicated the Temple (Schiffman 1975: 60ff.).

The Damascus Document (CD) from Qumran is explicit about the priests who profane the Temple and fail to observe the distinction between clean and unclean (CD 5.2ff.). These so-called false priests "teach lies," "prophesy falsely," and lead the people to exchange the "law engraved on their hearts for the *smooth things* they speak" (1QH 4). The War Scroll, which describes the final battle between the sons of light and the sons of darkness, reveals the community's belief that after this holy war they would reconstitute the Temple in its pure and true form (Vermes 1980: 122–23). The extreme concern with purity and matters of inclusion and exclusion from the community at Qumran are derived primarily from the levitical codes in Leviticus 13 and 21, which deal with the disqualification of priests from Temple service (Schiffman 1989: 69). In the Dead Sea Scrolls these levitical regulations, which originally pertained only to the priests and their service in the Temple, are applied to the entire Qumran community. Qumran idealized the Temple in its community structure. The community understood itself as the *true* Temple, and ordered its life to accord with its tradition of how the Temple in Jerusalem should be run. In the view of the Qumran community, false priests now control the Temple; but soon God would intervene and restore the true priests, and "true People of God" (cf. War Scroll 3)—the Qumran community itself—to the Temple in Jerusalem.

Fragments of *Jubilees,* a book that records the things revealed to Moses during his 40 days spent on Mt. Sinai, were found at Qumran (see CD 16.2–4). *Jubilees* is concerned with ritual purity, Sabbath laws, tithes, circumci-

sion, incest, calendrical issues, and sacrifice. Obedience to these laws is its central message. The book, which dates from between 161–140 B.C.E., is "a primitive history rewritten from the standpoint of ritual law" (Charlesworth, *OTP* 2: 35–46). The author appears to be from priestly circles. Unlike other texts at Qumran, *Jubilees* lacks evidence of a break or hostility toward the Temple in Jerusalem. While the Temple is central in both *Jubilees* and the Dead Sea Scrolls, *Jubilees* appears to represent a period prior to the decisive break between the Qumran sectarians and the priests and Temple in Jerusalem.

The attack almost certainly on the leadership in the Jerusalem Temple is particularly strident in the mid-1st century B.C.E. *Psalms of Solomon.* The "sinners" are repeatedly described as *anomia,* or lawless (*Pss. Sol.* 1:8; 2:3, 12; 4:1, 8, 12). They are profaners who live in hypocrisy and strive to impress others (chap. 4). They have stolen from the Temple's sanctuary, and have no regard for the distinction between pure and impure (2:3–13; 8:11ff.). Similarly, two documents from the so-called Pseudepigrapha, the *Testament of Levi* and *The Lives of the Prophets,* say that the priests of the Temple have profaned the priesthood, defiled the altar of the sanctuary, and behaved shamefully behind the veil (Heb *dabir*) of the Temple (*T. Levi* 16:2–4; 14:4–6; *Liv. Pro.* 3:15ff.). The *dabir* of the Temple is torn in *T. Levi* 10:3 to expose the deeds of the priests on the other side.

It appears that the 1st century C.E. Jewish popular movement centered on Jesus of Nazareth was also at points hostile toward the Temple. In Mark, the earliest Gospel, Jesus responds negatively to a disciple's comment about the beauty of the Temple: "Do you see these great buildings? Not one stone will be left upon another which will not be torn down" (Mark 13:2). In Mark 14:58 and 15:29 it is charged that Jesus meant (in 13:2) he would tear the Temple down, though in 14:56 the narrator claims this is not what Jesus said. Also, the Synoptics report that when Jesus died the veil of the Temple was torn in two. While the precise meaning of this symbolic act is debated, some have understood this as a devaluation of the Temple.

The Samaritans constituted an important pre-70 Palestinian Jewish group which was essentially Temple-based. The Samaritans were in competition and conflict with the Temple in Jerusalem and claimed that the true center of Yahweh's cult was ancient Shechem and Mt. Gerizim, not Zion. This naturally met with opposition from the Jerusalem priests. However the Temple looms large also in the life of the Samaritans and the history of the Samaritan schism and debate. They too made Temple and Temple traditions central to their religious life and behavior.

The symbol and the system of the Temple informed the debates among the Judaisms of pre-70 Palestine (Blenkinsopp 1981). Those debates were not only theoretical; they convey the sense of a real place that varied groups sought to control and, in some cases, perhaps to supplant.

2. The Temple in Diaspora Judaisms. Even outside the land of Israel, where travel to Jerusalem was difficult and rare, differences among Judaisms can be understood in terms of the Temple. For example, the evidence of the Jews in Egypt presents three distinct perspectives on the Temple.

Despite Deuteronomy's stricture that Yahweh has only one valid sanctuary—"the place God will choose as a dwelling for God's name," widely assumed to be Jerusalem—Jewish sacrificial worship administered by priests and levites was carried out in Egypt. A temple was built at Leontopolis, by the priest Onias (either III or IV), sometime in the 2d century B.C.E. and was closed by the Romans in 74 C.E. (Hayward 1982). Josephus (*JW* 7.436) claims that it functioned for 343 years. It may have influenced the author of the Third Sibyl (Collins 1983: 63, 71, 95). The 1st century B.C.E. work known as *3 Maccabees* offers a different view; it reveres the Jerusalem Temple (Anderson, *OTP* 2: 509–64). A third perspective on the Temple, one typical of diaspora Jews shaped by Hellenistic philosophy, appears in the works of Philo of Alexandria. Philo devotes a large portion of *Special Laws* I to a discussion and description of the Temple, the priests in the Temple, their vestments, the qualifications for the priests and high priest, the animals used for sacrifice, and the requirements of the worshipper in the Temple.

For an audience that clearly knows little about Temple worship and sacrifice, Philo explains that among the 12 tribes of Israel one was selected, on its special merit, for the priestly office. There are tithes and revenues collected for the Temple, which are to continue eternally. The priests must have no deformity, bodily imperfection, or skin disorder. They are to symbolize perfection of the soul (*Spec Leg* I.80). In *Spec Leg* I. 83ff. Philo describes the vestments of the priests in great detail. These vestments symbolize the cosmos (the heavens, stars, and "sublunar" regions). As he does to the levitical rules and the Decalogue throughout *Special Laws,* Philo allegorizes the Temple, the priests, and the legislation associated with the cult to represent platonic types imbedded in the very structure of the cosmos. The Temple in Jerusalem, for Philo's audience, is treated as a "cosmic mystery" (Goodenough 1940: 208), and described as a representation of the eternal virtues and *logos* of the cosmos.

A similar transformation takes place in the NT epistle to the Hebrews, which speaks symbolically, or typologically about the Temple. There Jesus is spoken of both as the *perfect* high priest and *perfect* sacrifice. In heaven is the "true tabernacle which the Lord has pitched" (Heb 8:2). Those who are priests on earth "serve a copy, a mere shadow of the heavenly" (8:5). As with Philo, the images and symbols of the Temple remain central for the author of Hebrews. However, the meaning of these symbols, and of the Temple itself has been transformed. The Temple, its priests, laws, and sacrifices, are earthly, imperfect types for perfect and abiding cosmic mysteries and truths.

Another figure associated with the Jewish diaspora is Paul of Tarsus. The Temple was important to Paul, but only as an image and only when understood to represent the community. "Do you not know you are the Temple of God? If any man destroys the Temple of God, God will destroy him, for the Temple of God is holy, and that is what you are" (1 Cor 3:16). For Paul the community becomes the locus of holiness and sanctity. In this vein, though in a somewhat allegorical manner, he applies levitical legislation and the notion of sacrifice to a man corrupting the community with impure behavior (Gk *porneia*; 1 Corinthians 5).

Though often transformed and reappropriated, the

structure, function, and legal framework of the Temple supplied the fundamental model for religious activity and self-understanding for varied diaspora Judaisms. Despite the divergent understandings of the Temple and its meanings—understandings that range from the strongly literal to the extremely figurative—few Jewish groups before 70 appear to have anticipated having a religion with no Temple at all. The intense disagreement about the operation and significance of the institution attests to its widespread importance.

3. The Temple After 70 C.E. The Temple's destruction necessitated the development of strategies of reinterpretation, even for those pre-70 Judaisms that in effect had bypassed the Temple in their religious practice. Even Pharisees and those who came to be called Christians, who fared well in the post-70 period and whose systems did not require a literal Temple, still laid claim to traditions that produced the Temple, and each had to account for its significance.

Following the destruction of the Temple, various Judaisms turned to other aspects of their heritages to adapt to the changed reality in the post-70 period. All of them, to be sure, turned to scripture, which had been a basic component of the Jewish cultural framework since the Persian period. In addition, texts such as *2 Baruch*, *4 Baruch*, and *4 Ezra* reflect the increasing emergence of what they call "the law" as a response to the Temple's loss.

The Temple's destruction appears to have created a religious and cultural upheaval. Several documents from the post-70 period, assigned to the Pseudepigrapha, explicitly reflect on the destruction of the Temple and its meaning. Many attempt to trace this event to some injustice or "faithlessness." The *Apocalypse of Abraham* 27 describes the destruction of the Temple, which it claims is a result of "evil works" (*OTP* 1: 702).

The 587 B.C.E. destruction of the Temple is depicted allegorically in *2 Baruch* in order to address the destruction of the Temple in the time of the author. In *2 Baruch* 6 the Temple is destroyed and the veil, the mercy seat, the tables, the vestments, and the vessels are all taken away. These items are stored in the earth, "until the last times," "until the moment that it will be said that it will be restored forever." In *2 Bar.* 10:18 the priests of the Temple take the keys to the sanctuary and cast them into heaven saying, "take these keys, guard your house yourself, for we have been found false stewards." Essentially the same passage is contained in *4 Bar.* 4:4, and a similar passage can be found in *ʾAbot R. Nat.* 4 (Goldin 1955: 37).

After the destruction, all that Israel has left is God and God's "law" which will last forever (*2 Bar.* 77:5; 85:3). The righteous are those who keep "the law." "The law" is God's gift to Israel (*4 Ezra* 3:19; 7:22ff.; 8:28). The importance of the scribe, and the renaissance of figures like Baruch and Ezra, support the role of the law in the post-70 period.

This "law" is thought to derive largely from behavioral regulations that initially supposed and were intended for the Temple system and service. In certain respects, the continuation (and in some cases the intensification) of "legal" issues and concerns in the post-70 period testifies to the importance of the Temple even after its destruction. For a number of groups within Judaism in the post-70 period, the levitical system persisted long after the institution for which it was designed had disappeared. This is dramatically evident in the Mishna, the first collection of the teachings of the rabbis.

Although the Temple had been destroyed for over a century, the Mishna discusses the Temple and Temple issues as if the building were still standing. Over half of the tractates of the Mishna, in fact, pertain to the Temple. Tractate *Qodašim*, for example, contains discussions about issues central to the Temple, such as sacrifices and vows. Although the Mishna's treatment of the Temple may be a utopian fantasy or a hope for the cult's future restoration (Neusner 1989), the document provides a strategy and a means for the adaptation and continuity of the levitical religion the Temple had represented and promulgated.

C. The Pharisees

Of the pre-70 Jewish groups, the Pharisees are perhaps the best known, because of their role as Jesus' principal opponents in some gospel narratives. But Josephus and early rabbinic literature also provide information about them (Neusner 1971). Indeed, Josephus claims to have been a Pharisee (*Life* 9–12), and Paul's enigmatic assertion that he was a Pharisee "as to law" (Phil 3:4–6) is often taken as a claim of membership in the Pharisaic group.

Josephus (*JW* 2.8.2–14; *Ant* 18.1.2–6) lists the Pharisees as one of the three sects or philosophical schools (Gk *hairesis*) among the Jews. The others are the Sadducees and the Essenes. In Josephus, the Pharisees appear primarily as a political interest group. In modern sociological terms, they were from the retainer class (Saldarini 1988). With no political power of their own, the Pharisees depended on good relations with the ruling class to achieve their goals for Jewish society. Josephus reports that the Pharisees gained and then lost the support of John Hyrcanus, who ruled the Hasmonean kingdom from 134–104 B.C.E. (cf. *b. Qid.* 66a).

A similar story (*JW* 1.5.2) describes how the Pharisees gained the favor of Queen Alexandra, widow and successor of Hyrcanus' son, Alexander Janneaus, who had succeeded his father after a futile struggle for power between his brothers Aristobulus and Antigonus. According to Josephus, during Alexandra's rule (76–67 B.C.E.) the Pharisees became the real administrators of the state, with the power "to bind and to loose," and enjoyed royal authority. *Ant* 13.15.5ff. recounts Alexander's deathbed advice to Alexandra to work with the Pharisees to ensure her successful reign. Because the Pharisees are the "most accurate interpreters of the law," they are respected by and popular with the people, who do whatever the Pharisees say. The Gospels' highly stylized conflict stories, which ally the Pharisees with the Herodians against Jesus, suggest continued Pharisaic collaboration with political powers during the reign of Herod (37–4 B.C.E.). These stories depict the Pharisees as a political interest group, but they do not reveal a political program or the focus of the Pharisees' interests.

Josephus' reports about the Pharisees' beliefs address general philosophical matters, not matters of Jewish communal practice. In *Jewish War* (2.8.14) and *Antiquities* (18.1.3–4) he describes the positions of the Pharisees and Sadducees on such issues as fate, free will, the immortality of the soul, and reward and punishment. The Pharisees,

he says, believe that the soul is imperishable, and that the souls of the wicked are punished eternally. They believe in fate, free will, and God. They make no concession to luxury, show respect for their elders, and follow the guidance of reason and what is good. Worship is conducted according to their views, which are influential among the people. They cultivate harmonious relationships with one another and with the community. In *Life* he compares the Pharisees to Stoics. Taken together, these statements do not constitute a program for reforming Palestinian Jewish society and do not suggest what might have been at stake in the Pharisees' political activity.

A hint about the Pharisees' goals may appear in Josephus' claim (*Ant* 13.10.6) that the Pharisees observe "traditions of the fathers" not recorded in the law of Moses, traditions the Sadducees reject (Baumgarten 1987). Regrettably, Josephus does not discuss the content of these traditions, which can only be conjectured on the basis of the NT and early rabbinic literature.

The Gospels depict the Pharisees primarily as debate partners for Jesus and report almost nothing of their role in larger Palestinian society. A few positive pictures notwithstanding (John 3; Acts 5), the Gospels usually present the Pharisees negatively, as a religious type antithetical to Jesus and his teaching. The contention between the Pharisees and Jesus tends to be about issues of purity, Sabbath observance, fasting, and tithing. The dispute between Jesus and the Pharisees about eating with unclean hands becomes the occasion to contrast the Pharisees' "traditions of the elders" with the commandments of God (Mark 7:1–23 and Matt 15:1–20). The Gospel stories depict the Pharisees at least as a lay group concerned with applying its own tradition of levitical piety to the context of everyday life and commerce (Neusner 1973).

Although the use of rabbinic materials for the study of the Pharisees is complicated by problems of redaction and dating, it is widely assumed that early rabbinism either derived from or appropriated much of the pre-70 Pharisaic agenda. Seven disputes between Pharisees and Sadducees from the Mishna and Tosefta focus largely on issues of purity. Moreover, if the earliest stratum of the Mishna is assumed to reflect Pharisaic concerns, then there is clear overlap between the rabbinic picture of the Pharisees and that of the Gospels (Neusner 1971).

The character of the sources permits only a schematic picture of the Pharisees; a nuanced description is not possible. On the basis of the way those sources reinforce one another, the Pharisees appear as a lay group that drew on a discrete, nonscriptural tradition of levitical piety and attempted through political means to reform Palestinian Jewish society to conform to that tradition.

D. The Sadducees

Information about the Sadducees is both more sparse and more questionable than what is known of the Pharisees. No Jewish source was composed from the Sadducean point of view: no figure from antiquity identifies as a Sadducee; no Jewish movement or group claims Sadducean descent. In the sources that mention them—Josephus, the Gospels, and rabbinic literature—the Sadducees tend to be coupled with the Pharisees and rarely appear alone. Josephus claims to have been a Pharisee, and the Pharisees may have been gaining power and acceptance in Palestine after the Temple's destruction, when he wrote. Thus, his description of the Sadducees may be biased against them (Cohen 1979). In rabbinic literature, the Sadducees are treated almost as outsiders (Saldarini 1988: 301).

Because they are so often coupled with the Pharisees, in Josephus the Sadducees resemble a political interest group, and in the Gospels they appear as opponents of the Jesus movement. Likewise, in rabbinic literature their disputes with the Pharisees follow the Pharisaic agenda and focus mainly on issues of purity.

Materials in all three sources agree that the Sadducees deny resurrection of the dead (*Ant* 18.1.4; Mark 12:18; *b. Sanh.* 90b, *'Abot R. Nat.* A, 5) Josephus adds that they do not believe in fate, accept no observance "apart from the laws" (*Ant* 18.1.4), and reject traditions of the Pharisees (*Ant* 13.10.6). These scant reports cannot justify a judgment that the Saducees were scriptural literalists or had no traditions of their own. Sadducees may have been a part of the ruling elite, but they cannot be identified with it (Saldarini 1988). On the basis of the sources, it is difficult to say much about the kind of Judaism the Sadducees represent.

E. The Essenes

The third of Josephus' three *haireseis* are the Essenes. Philo (ca. 40 C.E.), in *Every Good Man is Free* (12–13; 75–91), and *Hypothetica* 11.1–18 (preserved in Eusebius, *Praeparatio evangelica*), and Pliny the Elder, in *Natural History* 5.15.73, ca. 77 C.E., also mention the Essenes, but their accounts are of slight historical importance (Beall 1988). The contents of the Dead Sea Scrolls (DSS), discovered in caves along wadi Qumran in 1947, and the descriptions of Josephus provide the most information about the Essenes. Although the issue is still debated, the DSS are almost universally regarded as documents from a monastic-like Essene community that lived near the shores of the Dead Sea (Cross 1980). The scrolls cover a period approximately from Hasmonean expansion (ca. 150–120 B.C.E.) to the destruction of the community by the Romans (ca. 70–72 C.E.), and they describe the beliefs, order, construction, theology, and some of the history of the community (Cross 1969; Charlesworth 1979–81). Certain scrolls, as in the case of the Damascus Document, seem to have been written outside of Qumran and may even pre-date the Qumran community. The scrolls are not monolithic. They were written over a substantial period of time, and their views on issues of the Temple, law, the Romans, and communal order suggest some variety even within the broad rubric of Essene Judaism (Davies 1982; Murphy-O'Connor 1974).

The most widely accepted theory of the origins of the Qumran community assumes that these Essenes withdrew to the desert to protest what they regarded as the illegitimate Hasmonean claim to the high priesthood. The Essenes' hostility to the Temple's leadership surfaces in several sources, including Josephus. The literature of Qumran denounces the priesthood in Jerusalem as false and profaners (cf. CD 1; 1 QS 7,11). The centerpiece of Qumran ideology is the expectation that God will soon act, judge, and condemn these false leaders and priests, and will restore the Qumran community to the Temple in

Jerusalem and the high priesthood. The so-called Teacher of Righteousness, whom the scrolls depict as the founder of the community, may have been deposed as high priest and exiled when the Hasmoneans assumed control of the Temple.

According to Josephus, the Essenes are Jews by birth and have more "mutual affection" than other groups (*JW* 2.8.2–13). They turn aside from pleasures as evil and regard as a virtue self-control and not succumbing to passions. They "despise riches," transfer their property to the sect upon joining, and hold all things in common. Josephus says the Essenes regard marriage with contempt and will adopt other people's children as if they were their own. They dress simply, avoid all kinds of "defilements," and have no city of their own.

The Essenes apparently had pockets in many cities, and offered hospitality and support to other members who were passing through. They rigorously avoided contact with outsiders and were strictly warned about speaking ill of the group. The community had a series of strict punishments for violations of purity regulations, for failure to abide the rules of the community, or for denegrating the community in either language or action (Forkman 1972). The community ordered itself along the lines of the Temple in Jerusalem. The various members and initiates were organized in order of their standing in the community, the number of years they had been members, and the degree of purity they had achieved (Schiffman 1975). In their life, actions, and self-understanding the Essenes sought to replicate the Temple.

The Qumran community also valued the role and authority of scripture. The DSS evidence a distinctive type of exegesis referred to as *pesher*. The stories and passages from scripture were understood strictly in terms of the history and destiny of the community (Fitzmyer 1974). Some of the prophetic literature, especially Habakkuk and the Psalms, figure prominently in Qumran's distinctive scriptural interpretation. The recently published Temple Scroll details the community's eschatological hopes about the Temple in Jerusalem, and the War Scroll depicts the holy war waged by God on behalf of the community against the wicked priests and the *kittim*, the term the community seems to have applied to the Romans (Vermes 1980).

The doctrine of the Essenes, Josephus writes in *Ant* 18.1.2, 5 (11, 18–22), is to leave all things to God. They regard souls as immortal and strive to fulfill paths of righteousness. He claims the Essenes are more virtuous than either Greeks or barbarians. Their wisdom is, to those who have experienced it, "inescapable bait." This description—typical of Jewish apologetic literature of this period—is designed to appeal to non-Jewish, Greco-Roman readers. By emphasizing the Essenes' asceticism, the wisdom of their teaching, and their dedication to their beliefs and lifestyle, Josephus aims to make their religious practices appear admirable, virtuous, and worthy of emulation.

The Judaism of the Essenes, as represented in the DSS, exhibits the components of the Judaic framework that emerged during the Persian period. Though withdrawn from the Temple and disapproving of its current leadership, the Qumran community clearly expected to gain control of the institution and the administration of its rites. Qumran Judaism, therefore, was Temple-centered in a concrete, this-worldly sense. The community expected to achieve victory as the result of an eschatological war, which among other things would bring a definitive end to the present political order. Thus, the Qumran worldview had a pronounced apocalyptic element.

As a virtual community in exile, Qumran had to devise rules for behavior both to maintain the community's distinctive life in the present and to prepare for the new order of the future. In so doing, it devised a "unique system of Jewish law," some of which was based on biblical exegesis and some not (Schiffman 1983: xi). Although the DSS do not claim the community's practice as inherited tradition, the duration of the community and its likely origin as the result of intra-priestly conflict suggest that it may have followed nonscriptural levitical traditions different from those applied by the Jerusalem priesthood.

Finally, the Qumran community justified its apocalyptic vision and its distinctive levitical practices with interpretation of scripture, and it is obvious that scripture was an important source of religious authority and legitimation. In contrast to other Judaisms, the evidence for the Essene Judaism of Qumran displays the components of Temple, tradition, scripture, and apocalyptic with unusual definition and balance.

The Essenes are not mentioned in the NT or rabbinic literature, and there is no trace of their Judaism after 70 C.E. Because of the discovery of the Dead Sea Scrolls, we know more about the Essenes than the other *haireseis* Josephus mentions. But there is little evidence that their Judaism had a significant impact on ancient Palestinian Jewish society.

F. Josephus

Because so much information about the Judaisms in the Greco-Roman period comes from Josephus, he deserves brief consideration on his own. The sheer amount of his writing and its impact on the history of Judaism sets Josephus apart from other writers of this period.

Josephus was born ca. 37 C.E. into a priestly family. Though he claims to have chosen the way of the Pharisees after studying several Jewish philosophies, no clear Pharisaic tendency is evident in his interpretation of Judaism. However, his writing does exhibit sympathy toward the Judean ruling classes and their attempts to retain control of Jewish society and suppress the popular movements that challenged Roman rule (Saldarini 1988: 81; Rajak 1984). Whether or not this thoroughgoing prejudice renders his history too biased to be useful continues to be discussed (Cohen 1979; compare Moehring, *ANRW* 2/21/2: 864–944 and Saldarini).

Josephus commanded rebel troops in Galilee during the first revolt against Rome, perhaps because he, like others of the Judean ruling class, anticipated the loss of Roman support and opted for popularity with the Jewish masses (Goodman 1987). Sensing defeat, Josephus surrendered to Rome and sided with Vespasian and his son Titus. Josephus' prediction that Vespasian would become Emperor (*JW* 3.3.9) helped endear him to the *Caesarea familia*. Josephus went to Rome as a client of the Flavians and wrote *The Jewish War*. Sponsored by others he wrote *Antiquities of the Jews* which included, as an appendix, his *Life*.

Josephus wrote *Jewish War* sometime during the reign of Titus (ca. 80), and *Antiquities* later (ca. 94). Later still he produced a short apologetic work, entitled *Contra Apion,* defending Judaism against a variety of charges. Josephus used several sources for his history, including Nicolaus of Damascus, other popular traditions, and the Bible (Schwartz 1983; Attridge 1986). His narrative of the politics and struggle for power in Roman Palestine exhibits a primary interest in the relation of the Jewish state and religion, and the Jewish ruling class, to the empires and powers that surround it. Josephus writes from the perspective of the upper class and balances a loyalty (perhaps resigned) to Rome with a dedication and loyalty to the Jewish people and religion. He speaks positively of rulers and groups who bring order and criticizes those who are destabilizing.

Throughout this political history the reader is given substantial information about the religious practices and convictions of the Jewish people. Loyalty to Torah, to the Temple, to the learned and disciplined nature of many Jewish groups are all features regularly encountered in Josephus' descriptions of Judaism(s). Josephus is an apologist for Jewish religion in the Roman world, and he addressed a largely Roman audience. He describes the history and beliefs of the Jewish people in a manner both understandable and appealing to his audience. Josephus is an invaluable source for the history of the Judaisms of Palestine, and his writings constitute a significant chapter in the embrace of and interest in Judaism by the wider Greco-Roman world.

G. The "Fourth Philosophy" and Other Popular Movements

In addition to the three *haireseis,* Josephus also refers to a variety of other 1st century Palestinian Jewish groups that scholarship now classifies as popular movements. The best known of these is the "Fourth Philosophy," but the list also includes the Zealots, the *Sicarii,* various prophetic, messianic, or royal groups, and even social bandits. All of these played a role in the rebellion against Rome, which is their common trait in Josephus' account of them.

Josephus' hostility to such rebel groups is well known, and not surprisingly his descriptions of them are truncated and focus almost exclusively on political or military matters. But many of these movements, according to Josephus, justified their action in religious terms, as expressions of loyalty or obedience to Israel's God. Thus, there may have been Palestinian Judaisms in which piety could lead to revolution. On the basis of what is known of the Bar Kokhba rebellion (132–35 C.E.), this option retained considerable appeal and resilience through the reigns of both Trajan and Hadrian (*m. Sota* 9.14). However, for various political purposes, the preserved literary sources—from Ben Sira to the Mishna—discourage revolution as a legitimate expression of devotion to the God of Israel. Thus, although the popular movements merit treatment in this overview, a secure interpretation of any of them as a Judaism is impossible to attain.

In Josephus' account, the Fourth Philosophy appears primarily as a tax-resistance movement. The Romans had deposed Herod's son Archelaus, imposed their own direct rule in Judea, and charged Quirinius, a Syrian legate, to conduct an assessment of how much tax could be extracted from the territories (Horsley and Hanson 1985: 190ff.). Josephus writes that "a Galilean named Judas was urging his countrymen to resist (the assessment), reproaching them should they submit to paying taxes to the Romans and tolerate human masters after serving God alone. Judas was a teacher [Gk *sophistes*], with his own party, in no way similar to others" (*JW* 2.118).

In *Antiquities* 18 Josephus writes that Judas was from Gamala, in Gaulanitis (actually not Galilee), and that he was "in league" with Zaddok the Pharisee and had pressed hard for the resistance to the assessment. Judas claimed these taxes were nothing short of slavery and urged the nation to "claim its freedom." If they would succeed in their resistance, said Judas, "the Jews would pave the way for good fortune; if they fail, they would at least obtain glory and honor for their high ideals." Of course, they could be confident that God would join them in their fight. Josephus writes that the people listened to this "with relish," and that Judas and Zaddok succeeded in establishing "an alien fourth philosophy" among the Jews. "When their numbers grew they filled the nation with unrest, and were at the root of the afflictions which ultimately enveloped it."

Josephus stresses that the Fourth Philosophy was formed in response to unjust rules and inept local Roman governors and legates. But in his account, the burden of new taxes and fidelity to the traditions and laws of the Jews provoked the formation of this revolutionary movement and drove it to rebellion. He says (*Antiquities* 18) that the beliefs and behavior of the Fourth Philosophy closely resembled those of the Pharisees, except for their unusual commitment to freedom.

The tensions related to the formation and rise of the Fourth Philosophy are responsible for a variety of anti-Roman movements between the death of Herod the Great and the Bar-Kokhba revolt in 133 C.E. Syrian domination, which lead to the Maccabean revolt, and subsequent Roman domination from 66 B.C.E. on, frequently resulted in irreconcilable choices for Jews between their loyalty to their beliefs and nation and their service to foreign rulers. While there were periods of relative calm and cooperation between Romans and Jews in Palestine, the imposition of taxes, expansive building projects (especially under Herod), conflicting foreign beliefs, and insensitivity to native Jewish religion provoked unrest and resistance.

One example of such social unrest and resistance has recently been referred to as "social banditry" (Horsley and Hanson 1985). The socioeconomic inequities in Palestine under Roman rule resulted in a rather widespread robbing of the rich (or whoever had resources) by the peasantry of Palestine. Both in *Life* 77 and *JW* 4.84 Josephus describes groups of brigands (Gk *lestai*), and he mentions in particular that Gischala (in upper Galilee) had been "infiltrated by a sizable gang of brigands." Other incidents involving brigands are found in *JW* 3.434; 2.541ff., and elsewhere. The reality of brigandry points to the breakdown of Palestinian society and widespread dissatisfaction with Roman rule. The brigands represent the beginning of fairly comprehensive resistance to Roman domination in the pre-66 period.

This period of unrest in Palestine also provoked a num-

ber of popular or charismatic leaders. Some were referred to as "king," others "prophets," and others "messiah." In the Galilean city of Sepphoris Judas, the son of Ezekias, a well-known brigand chief, led a raid and revolt at the death of Herod ca. 4 B.C.E. (*Ant* 17.271ff.). A servant of King Herod named Simon, "spurred on by chaotic social conditions, dared to don the diadem, and was proclaimed king by some fanatical men, because he thought himself more worthy of this than any other" (*Ant* 17.273). This Simon led a popular revolt, plundering royal palaces throughout the land, until captured and beheaded. In *Antiquities* 17 Josephus also describes Anthronges, a man of renown, who aspired to be king. He and his 4 brothers each had followers, and were not afraid to die. They fought hard against Roman and Herodian troops. "Whenever seditious bands came across someone suitable," writes Josephus, "that person could be set up as king" (*Ant* 17.278–85). Indeed, Judas the Galileans' son, Menachem, was a leader in the first revolt and was hailed in Jerusalem as a king (*JW* 2.433ff.).

Several literate groups employed the term "messiah" for a leader, or expected leader. The mid-1st century B.C.E. *Psalms of Solomon* (17:32), the DSS (Vermes 1980: 118ff.), and some strands of the Jesus tradition within Palestine used this term to describe their leader. When discussing popular movements, however, Josephus assiduously avoids the term "messiah." The emergence of the figure Menachem in 66 C.E. among the popular resistance group the Sicarii—the "dagger men"—has been viewed by some as a brief episode of messianism among this group, and the Bar Kokhba revolt of 133 is treated in later rabbinic tradition as a "Messianic movement" (Horsley and Hanson 1985: 118; 127ff.).

There were also several "prophetic movements" in the 1st century. These leaders attempted to identify with the Israelite prophets of old and reiterated their message of a nation that had strayed from the commands of God, impending judgment, and the hope of vindication and restoration. Josephus describes in some detail one Theudas who persuaded most of the "common people" to take their possessions and follow him to the river Jordan. He said he was a prophet, and that at his command he could divide the river (*Ant* 20.97–98). Fadus, the governor of Judea, had Theudas captured and beheaded. Josephus also describes an Egyptian Jewish prophet who, though a charlatan, was credible enough to rally about 30,000 "dupes," and to incite them to try to storm Jerusalem. Many were killed or captured, but the Egyptian escaped (*JW* 2.261ff.). John the Baptist, mentioned in the Gospels as related ideologically, if not by kinship, to Jesus of Nazareth, is depicted as a prophetic leader in the tradition of Isaiah or Elijah. There were others, including the Zealots and various resistance groups which coalesced after the start of the 66 revolt to fight against Rome.

"Charismatic Judaism" is a modern scholarly term that identifies a supposed popular form of piety, primarily centered in Galilee. This scholarly construction would also qualify as a "popular movement." The figures usually associated with this putative Judaism are Honi the Circle-maker (*m. Taʿan.* 3.8; *b. Taʿan.* 23a; *j. Taʿan.* 81d), Haninah ben Dosa (*m. Ber.* 5.5; *t. Ber.* 3.20; *m. Soṭa* 9.15; *ʾAbot* 9–10), and Jesus of Nazareth.

In the primary passage about Honi, Honi prays unsuccessfully for rain, and then draws a circle, stands inside it, and refuses to move until God makes it rain. His actions appear to be a version of a magical rite. After the rain falls, Simeon b. Shetah rebukes Honi's behavior but declines to excommunicate him. Josephus also refers to a certain Onias who once prayed successfully for rain to end a drought during the time of Hyrcanus II, but was stoned to death for refusing to issue a curse on Hyrcanus' brother and rival Aristobulus II (*Ant* 1.22–25).

The passage about Haninah in *m. Ber.* claims that, when he prayed for the sick, he knew by the fluency of his prayer who would live or die (5.5). Tosefta *Ber.* 3.3 assigns a nearly identical saying to Akiba, so there is no way securely to attribute either saying to Haninah. The Babylonian and Palestinian Talmuds (*Ber.* 34b and 9d respectively), contain stories of Haninah's successful prayer for healing of Rabban Gamaliel's son. Thus, Haninah is celebrated in rabbinic tradition primarily for the efficacy of his prayer, not for a distinctive kind of Judaism.

A fundamental problem with the classification "charismatic Judaism" is that it is based on biographical information about a few figures, mostly from a handful of late rabbinic passages. But rabbinic documents are dominated by consensus, and their sense of the individual—of separate existences—is minimal. The documents do not lend themselves easily to biographical reconstruction (Green 1981: 18–19). The scholarly category of charismatic Judaism also relies on strained analogies with Jesus of Nazareth (Vermes 1983: 42, 49). Rabbinic traditions about such figures do not provide evidence for a distinctive Galilean Judaism.

The many popular movements in this period resulted from social unrest, a failure of the ruling class, and Roman maladministration. The religious aspirations and traditions of Israel supported the hope of freedom from foreign domination and/or the social ills that plagued society. The identification with these religious traditions and hopes were the means by which many popular leaders gathered support and a substantial following.

H. Jesus-Centered Judaism

The beginning and early stages of the Jesus movement are depicted in the four NT Gospels written 40–70 years after Jesus' death in 33 C.E. These Gospels are stylized narratives which purport to tell the story of the life of Jesus, but do so with a focus on the issues confronting the people by or for whom the Gospels were written.

It is anachronistic, though still commonplace, to identify the Jesus movement of 1st century Palestine as "Christianity." In its historical and religious context and in its varied forms, the Jesus movement was a type of *Judaism* and was viewed as such by non-Jews. The classification "Christianity" sets the Jesus movement over against Judaism and also obscures important differences within this Judaism. Jesus-centered Judaism was not monolithic. The internal differences within this Judaism parallel those that distinguished other Judaisms from one another. Some variants of this Judaism stressed scripture, tradition, and aspects of levitical piety, while others were dominated by apocalypticism.

Mark's gospel, for example, is thoroughly apocalyptic in orientation (Mack 1988; Kee 1977). The day of the Son of

Man, the woes and birth pangs which precede the end of the age, the arrival of the kingdom of God, and the struggle with evil powers are central features of Mark. These apocalyptic themes are highlighted in Mark 13, but in fact run throughout the gospel. The apocalyptic nature of Jesus-centered Judaism fits well into the volatile and fragmented milieu of Palestine in the 1st century (Horsley 1987). Matthew, on the other hand, while still maintaining an apocalyptic component, stresses issues of law, tradition, and levitical piety.

Where Mark does not engage issues of Sabbath observance (Mark 2) or food laws (Mark 7), Matthew enters into lengthy debate on the validity of his community's interpretation of these laws (Overman 1990). Both Matthew and Mark develop traditions grounded within Israelite history which are meant to support their respective versions of Jesus-centered Judaism. The popular, traditional figures of Moses, Isaiah, or one of the prophets are used in support of the portrayal of Jesus and the sort of Judaism the writers wished to present. In the so-called Q source common to Matthew and Luke, popular oral sayings about Israelite heroes and traditions combine with an apocalypticism in order to present this particular form of Jesus-centered Judaism (Mack 1988; Kloppenborg 1989).

A central feature of the Gospels is the hostility between Jesus and the Jewish religious authorities. The so-called conflict stories in the Gospels usually concern a dispute over some aspect of Jewish law or tradition (Hultgren 1979). A stock feature of all the gospels is Jesus healing on the Sabbath, or his followers violating purity regulations. These acts lead to an encounter between Jesus and the Jewish authorities who are described somewhat indiscriminately as scribes, Pharisees, chief priests, Sadducees, the elders of the people, or some combination of these groups. By whatever name, these groups are intended to represent the opposition to the Jesus movement in 1st century Palestine.

In the conflict stories Jesus and his followers are accused by the religious authorities of violating the laws and traditions of Israel. This provides an occasion for Jesus to introduce his interpretation of scripture and enter into debate with these authorities over the role and meaning of scripture, tradition, and religious practice. Jesus is frequently portrayed as citing scripture, alluding to a famous Israelite prophet, or telling a story or parable that can be related to Israelite tradition and history.

The relationship between the Jesus movement and the Temple in Jerusalem remains a matter of considerable debate (Sanders 1985). Jesus goes up to the Temple when in Jerusalem, and his act of driving out the money changers is depicted as a defense of the purpose and role of the Temple in Jewish religious life (Mark 11:15–18). However, Jesus' threat against the Temple, saying he would destroy it and build another, emerges clearly in the Gospel trial scenes, and plays a significant role in Jesus' death (Juel 1977). At his death the Temple veil is torn in two. Whether this should be read as a denunciation of the Temple as an institution or just the current Temple personnel (or something else altogether) is a debated question.

There were varieties of Jesus-centered Judaism. What these disparate groups held in common was their allegiance to the person of Jesus, which distinguished them collectively from all other Judaisms. However, each Jesus-centered Jewish community portrayed and described him in its own way. Otherwise, Jesus-centered Judaisms reflected the diversity found among the other Judaisms of this period.

I. The Samaritans

In terms of the larger Judaic framework, Samaritanism (though often called a sect) constituted a Judaism during the Greco-Roman period. The Samaritans claimed Shechem and the adjacent Mt. Gerizim as their historic cultural and religio-cultic center. They claimed to be the descendants of the tribes of Ephraim, Manasseh, and Levi, and to represent faithful, continuous worship of Yahweh from the time of the Israelite conquest of Canaan. What finally separated the Samaritans from the Jews who were loyal to the cult in Judah was the question of which was the true holy place, Jerusalem or Shechem (Purvis, *CHJ* 2: 591–613). Samaritans condemned the leadership in Jerusalem and its Temple cult as an aberration.

Those loyal to the Jerusalem Temple tended to charge that Samaritans were not Jews but syncretistic in life and belief, in some sense half-Yahwistic and half-pagan. This claim goes back to 2 Kings 17, and persisted as late as the writings of Josephus (*Ant* 9.288) and the NT gospels of Matthew, Luke, and John. In Luke and John, Samaritans represent in a novel way the inclusion of the other or outsider into true Israel. These stories in Luke or John, along with Matt 10:5, represent some animosity between Samaritans and the Judaism centered on the Jerusalem cult in the Hellenistic and Roman periods. Originally, worship of the God of Israel took place near Shechem, on Gerizim, long before a cult was established in Jerusalem. For various reasons, as Israelite history progressed Jerusalem became more and more the exclusive sacred center of the Israelites.

Samaritanism represents a clear objection to this development. This tension developed following the return of the exiles from Babylon and is apparent in the postexilic documents of Ezra, Nehemiah, and 1 Esdras. While friction between the two groups is demonstrable during the Persian period, the tension between Samaritan Judaism and Jerusalem-based Judaism was most pronounced in the Hellenistic period. The temple on Mt. Gerizim, according to both literary and archaeological record, was built around the time of Alexander the Great (*Ant* 11.302ff.). The sanctuary on Mt. Gerizim was destroyed by the Hasmonean leader John Hyrcanus ca. 128 B.C.E., and some 20 years later Shechem was razed. Excavations have shown that the Temple was rebuilt during the reign of Hadrian (Purvis 1986: 88).

Samaritan Judaism was clearly Temple oriented and centered. Like other Judaisms, Samaritanism also had a dispersion. There were Samaritan diaspora communities as far away as Rome, Thessalonica, and the island of Delos. Two inscriptions from Delos clarify the importance of the Temple and cultic worship for the Samaritans, even when far removed from Mt. Gerizim (Kraabel 1984).

The second important component of Samaritan Judaism is the Samaritan Pentateuch, written after the destruction of the Temple on Gerizim during the reign of John Hyrcanus. Samaritans responded to this crisis by reaffirming

their claim to be the true carriers of faith in Yahweh, and their conviction that Gerizim, though now in ruins, remained the true place for worship of God, and not Jerusalem. The edition of the Pentateuch drafted by the Samaritans promoted this claim. The ideology of the Samaritan Pentateuch is evident in its emphasis on Gerizim and Shechem and its downplaying of Jerusalem and Zion. Certain lengthy interpolations in Deuteronomy and at the end of the 10 commandments in Exodus seek to establish the position that God already established Shechem and Gerizim as the true place of worship and that Jerusalem and its priesthood were the latecomers (Purvis, *CHJ* 2: 612). In the view of the Samaritans, the Jerusalemites were inauthentic. These differences about both Temple and scripture distinguish Samaritan Judaism from other Judaisms.

J. Early Rabbinic Judaism

The principal source of information about early rabbinic Judaism is the Mishna, a philosophical legal treatise written in Hebrew and produced in Palestine about 200 C.E. under the auspices of the Patriarch Judah I, known familiarly as Rabbi. The Mishna is the first collection of the rabbis' own tradition and teaching, primarily on matters of *halakhah* (religious law and practice). Much of the Mishna is anonymous—so that the document often seems to speak for itself. However, it also contains opinions, disputes, and occasionally stories about or in the names of approximately 150 sages, who are dated from the 2d century B.C.E. to the beginning of the 3d century C.E. The bulk of the attributed material is reported in the names of fewer than 20 rabbis, primarily from 3 generations (roughly from the destruction of the Temple in 70 to the aftermath of the Bar Kokhba rebellion in 132–35).

The Mishna does not follow scripture's organization and does not present itself as an interpretation of scripture, which it cites with relative infrequency. Rather, the document is divided into 6 large sections or orders—*Zeraʿim* ("seeds," agriculture), *Moʿed* ("appointed times," festivals), *Našim* ("women," marriage and family law), *Neziqin* ("damages," civil law), *Qodašim* ("holy things," the rules of the Temple cult), and *Tohorot* ("purities," uncleanness taboos)—that together constitute 63 tractates. The Mishna is the foundation document of rabbinic Judaism. The rest of rabbinic writings, including the collections of scriptural exegesis called *midrash*, are now thought to postdate the Mishna. The Tosefta and the Palestinian and Babylonian Talmuds, the major collections of halakhic teaching, assume the Mishna and follow its organization.

The entire Mishna appears to have been redacted at once and according to a strict literary agenda. The sayings of discrete sages appear in a limited set of highly disciplined rhetorical forms that distinguish neither individual nor generation but are ubiquitous throughout the document. Moreover, rabbinic literature in general is collective, avoids biography as a genre, and fabricates tales about sages to illustrate idealized rabbinic values. Stories about early rabbis in later rabbinic literature cannot be supposed to have historical verisimilitude or reliability. Thus, it is impossible responsibly to present the story of early rabbinism in terms of the teachings and deeds of discrete rabbinic teachers. Rather, the history of rabbinism is best told in terms of the documents the rabbis produced.

The Mishna's Judaism emerged in the aftermath of the Temple's destruction in 70 and addressed the problem of how to sanctify the life of the people Israel in the absence of a cult. The Mishnaic answer is the promulgation of a levitical religion, which transformed priestly behavior and extended it to the life of the entire people in the natural and social world. The Mishna's piety consisted of a host of behaviors—food, purity, and kinship taboos; observance of Sabbath, holy days, and festivals; prayer—that promulgated levitical categories.

Jacob Neusner's revolutionary work shows that the earliest stratum of the Mishna's ideas, from before 70, deals with special laws of marriage, rules about when sexual relations may take place, and eating domestic meals in a state of purity, as if one were a priest. These concerns, along with the Mishna's assumptions about tithing and distinctive Sabbath observance, appear central to the agenda of the Pharisees, from whom rabbinic Judaism is thought to derive.

The next layer of the Mishna's ideas, from 70–135, focuses on taxes paid to the poor and the priests and on the conduct of the Temple cult itself. It also addresses taboos affecting the production of crops and on the ritual of the red cow, which raises the question of how to achieve purity outside of the Temple. The final layer of Mishnaic teachings constitutes a "range of topics so expanded that laws came to full expression to govern not merely the collective life of a small group but the political and social affairs of a whole nation" (Neusner 1989: 51). It includes civil and criminal law, the conduct of the cult, the documents necessary for the transfer of property, and the relationship between those expert in rabbinic teaching and those who are not.

It is important to note that more than half of the Mishna's contents pertain to matters of the cult—an astonishing trait of a document allegedly completed nearly 130 years after sacrifices had ceased and the Temple destroyed. Thus, in addition to its concern for the achievement of holiness in the realm of the everyday, the Mishna also has a strong utopian element (Neusner 1988: 48).

The shift in the Mishna's Judaism from a focus on the Temple to the entire nation of Israel as the locus of holiness was accompanied by the key and distinctive Mishnaic doctrine that the human being is the center of creation and has "the power, effected through an act of sheer human will or intentionality, to inaugurate and initiate those corresponding processes—sanctification and uncleanness—which play so critical a role in the Mishnah's account of reality. The will of the human being, expressed through the deed of the human being, is the active power in the world" (Neusner 1989: 199).

The Judaism of the Mishna draws on scripture but does not present itself as scriptural. It is surely Temple-oriented, but it treats the Temple as part of an idealized vision of a world to be achieved. Though utopian, the Mishna's Judaism eschews apocalyptic and supernaturalism. Much of the halakhic teaching in the Mishna draws on and elaborates rabbinic tradition, which may have its origins with the Pharisees.

The well-known rabbinic doctrines of the dual Torah

(oral and written) and of the study of Torah as an act of piety, though sometimes implicit in the Mishna's passages, receive their fullest expression in the post-Mishnaic tractate *'Abot* and in later rabbinic literature.

K. Judaism and the Attraction of Judaism in the Diaspora

As in Palestine, Jewish religion in the diaspora was diverse. The evidence precludes any claims for a monolithic diaspora Judaism. The highly philosophical writings of Philo express a diaspora Judaism certainly different from that practiced by the Jews in Egypt whose worship centered on the temple in Leontopolis. Josephus' historiography and his version of Jewish history in *Antiquities* reflects another Judaism informed by issues of Roman influence and domination. Paul's letter to the Romans or Juvenal's *Satire* 14 both reflect the involvement of gentiles in the Jewish community in Rome, which left a distinctive mark on Judaism there, and the city of Sardis reflects still another expression of Judaism in a thriving Jewish community in Asia Minor. The identity and nature of Judaism in the diaspora varied from locale to locale, from community to community. Three distinct communities help illustrate the strength and diversity of the Judaisms in the diaspora.

A large Jewish community existed in Rome from at least the 2d century B.C.E. By the turn of the eras there were 20,000–50,000 Jews in Rome (Penna 1982: 328). The Jewish community in Rome was sizable and at times worrisome to the Romans. Both the emperors Tiberius and later Claudius cracked down on the Jews. The so-called Claudian edict is reported by Suetonius (*Claudius* 25.4) and Dio Cassius 60.6.6. The Dio Cassius text states the Jews were forbidden to assemble in Rome, while the Suetonius text claims they were expelled. Dio's report probably represents an initial restriction against assembling ca. 41 which was followed by an expulsion under Claudius in 49 C.E. (Smallwood 1976: 215). Despite occasional political confrontations, the Jews in Rome continued to grow in number and influence. In the early 2d century Juvenal's *Satires* 14 relates with obvious consternation the inroads the Jewish religion was making into Roman society.

Alexandria was another Roman center with a large Jewish population. Jews in and around Alexandria produced a number of literate and prolific authors. Figures such as Aristobulus and Philo, and such documents as the *Sibylline Oracles* Book 3, the LXX, and the *Letter of Aristeas* are examples of the literature and *litterati* generated by the Jewish culture in this city. The Jewish community in Alexandria can be traced back at least until the 3d–4th century B.C.E. A number of scholars hold that the synagogue had its origin in Egypt, perhaps in Alexandrian Jewry (Hengel 1975). The literature from Alexandria provides an important example of the life and worldview of some diaspora Jews.

A third significant Jewish center was that of Sardis. Jews had settled in Sardis from the 3d century B.C.E., and the size and influence of this diaspora community continued to grow, as the epigraphical and archaeological evidence from Sardis shows (Kraabel 1978; 1982). Josephus mentions Sardis and the Jewish community in *Ant* 16.171; 14.259, and several times in *Antiquities* 11. The Jewish community in Sardis played an important role in the larger life and culture of the city as well as that part of Asia Minor. The Sardis synagogue in particular, an enormous and striking building, given to the Jewish community by the city *boule*, symbolizes the presence and impact of the Jewish community on the city. The synagogue occupies a central and prominent place in the layout and structure of the city (Kraabel 1978). The Sardis diaspora community has come to symbolize the success, so to speak, of diaspora Judaism in the Greco-Roman period throughout the Greek East. While there were certainly periods of persecution and stress, many diaspora communities sunk roots into the Greco-Roman culture, making a sizable impact on the life and culture of the cities and settings where these Jewish communities flourished.

In the diaspora (and in Palestine as well), Jewish communities gathered together in local or domestic settings, such as a home or a generic public building (White 1990). Scholars have tended to suppose that the formal, developed, and elaborate character of 3d to 5th century synagogues also applied to the gathering places of the earlier Greco-Roman period. But the common buildings that have been excavated at Gamala or Magdala in Palestine or at Delos or Ostia in the diaspora—which have been identified as "synagogues"—are small, simple structures that lack the traits of the later synagogues. In the period 63 B.C.E.–200 C.E., whether in inscriptions, the NT, or Josephus, it is better to understand the term "synagogue" to mean a public gathering or town hall rather than as a technical term for a religious institution specifically for Jewish worship (Meyers and Kraabel 1986: 175–210; Overman 1990: 56–61). During the 2d or 3d centuries, the elaborate synagogue building began to develop. By the late Roman period, such synagogues were scattered throughout the Greco-Roman world. Often, as in the cases of Sardis, Ostia, or Stobi, these were significant (even magnificent) buildings. Whether in the more refined and replete synagogues that appeared after 200, or in the plain and often domestic setting of the earlier Greco-Roman period, most Judaisms of the diaspora were in some sense synagogue-based (Kee 1990).

So far as we know, diaspora Jews understood themselves as part of historic Israel, albeit separated by an expanse of miles and culture. They made use of many of the traditions, rituals, and above all scriptures common to Israel. Yet Jews in the diaspora did develop a variety of distinctive traits when compared with their Palestinian counterparts. By all accounts, diaspora Judaism, as a result of the role of the synagogue, dispensed with a priesthood. Synagogue gatherings were administered by lay people. Also, the sacrifices performed by the priests in Jerusalem were not replicated in the diaspora synagogues. Diaspora Jews retained the scriptures and provided a prominent place for them in their life and worship. This was the Greek Bible or LXX. The Jewish writers of the diaspora were thoroughly steeped in the LXX, as well as in Hellenistic philosophy, literature, and historiography. The LXX became a vital vehicle for diaspora Jews to create a religious and cultural discourse that was both traditional and accessible to the broader Greco-Roman world (Kraabel 1987).

Both Philo and Josephus represent examples of diaspora Jews who use elements and traditions common to many

Judaisms in Palestine, yet adapt them to the culture and audience for which their writings were intended. Josephus likens the three *haireseis* in Palestine to Greek philosophy. He stresses in particular their view of fate and free will. When retelling the history of the Jews in *Antiquities,* he relates the great traditions and heroes of Israel's history in language and terms familiar to his Greco-Roman, largely non-Jewish readers. This is particularly true with his portrayal of Moses as the perfect lawgiver (Tiede 1972).

Philo also stresses scripture. He interprets Jewish history and religion using allegorical exegesis informed by Platonic and Stoic principles. The categories and figures of historic Israel are transformed by Philo. Moses, the patriarchs, the historic traditions, sources of authority, and myths of Israel merge with the dominant philosophies and influences of his culture. The result is a striking synthesis of historic Jewish traditions and beliefs and Greco-Roman philosophy and culture.

The interplay between these two vast categories was carried on throughout the diaspora. The result was a diversity of Judaisms, all of which put their own distinctive stamp on the process of this dynamic cultural synthesis.

Exponents of Jesus-centered Judaism in the diaspora, such as Paul or Luke, faced many of the same issues that confronted Josephus or Philo. Both Luke and Paul draw repeatedly from the scriptures, traditions, and heroes of Israel. Yet this is done with an eye toward the life and questions faced by their respective diaspora communities. For example, along with the scriptures, Luke reflects the influence of Stoic philosophy. Typical of the cultural diversity characteristic of diaspora Jews, Luke's highly stylized portrait of Paul in Acts depicts a cosmopolitan man who is equally at home in the Jewish synagogue, among the Greek philosophers, or holding forth in the Roman court. These were the cultural arenas that were part of the world of diaspora Jews.

The writings of Paul reflect issues which confronted many diaspora Jews when encountering the gentile world. The letters to the Romans and Galatians take up questions about the role of traditional Jewish practices, such as circumcision and dietary laws, in the urban centers of the Greco-Roman world. Paul spoke within Judaism. He said he was a Jew, of the tribe of Benjamin, and unto the law a Pharisee (Phil 3:5). The history and heroes of Israelite tradition and religion provide much of the framework for Paul's explanation of Judaism. The figure of Abraham is central to Paul's interpretation of Judaism in the diaspora for both Jews and gentiles (Romans 4; Galatians 3). Paul frequently takes up issues of law and scriptural debate, drawing heavily from the LXX; his view of history and the future is informed by an apocalyptic worldview similar to many Jews in Palestine. In the face of opposing views and factions, Paul also claims his interpretation of Judaism is authentic (Georgi 1985; Luedemann 1989). The challenge that faced Paul, like many other diaspora Jews, was how historic Judaism, as he understood it, related to gentiles who were increasingly becoming a part of the life of Jewish communities in the diaspora.

Diaspora Jews did tend to retain certain cultic practices; modified food laws, circumcision, and Sabbath observance. But in general it was the task of diaspora communities to fashion and appropriate Judaism in cultural and religious contexts quite different from those of Palestine. However well accepted, Jews were still minorities in these great urban centers, and the Jews of the diaspora were daily confronted with philosophies, political realities, and religions that constituted in some manner a challenge, if not a threat, to their religion. Judaisms in the diaspora cultivated a dynamic interaction with the elements of the Greco-Roman world which surrounded it.

Some of the events that shaped Jewish identity and religion in Palestine were not part of the experience of many diaspora Jews. The Babylonian exile, Seleucid domination, the Maccabean revolt and expansionism, Roman occupation of Palestine in 63, or even the destruction of the Temple in 70 C.E. may have only been stories diaspora Jews heard but were not part of their own diaspora experience. These critical historical events in Palestine, then, would have played a much smaller role in shaping Jewish religion in the diaspora. As a result of these and other differences, the varieties of religious expression within diaspora Judaism tended to vary from traditional "Palestinian Judaism" in some significant respects. For example they made important aspects of traditional Judaism portable or symbolic; the scriptures, the Temple, the land, even the synagogue community itself. Many Jews outside of Palestine grafted a Jewish theology of diaspora onto the Greco-Roman culture and social structure (Kraabel 1987: 58). The literature, philosophy, and at points the religions of the broader Greco-Roman world influenced and coalesced with traditional aspects of Judaism.

As Judaism in the diaspora transformed and appropriated aspects of the culture around it, many in the broader Greco-Roman world found themselves attracted to Judaism. This dynamic between diaspora Jews and Greco-Roman culture is an important chapter in the story of Jewish religion in the diaspora. The influence of many diaspora communities can be seen in the attraction it held for many in the gentile world. The celebrated case of the Roman family in Juvenal's 14th Satire has already been mentioned, however this is by no means an unusual case. Josephus throughout his works mentions many cases of gentile respect and enthusiasm for Judaism. *Antiquities* records at least 7 instances of conversion to Judaism by a gentile (Cohen 1987: 419). *Antiquities* also talks about adherants, and not only those who become circumcised and convert to Judaism. *Contra Apion* 2.282 mentions Greeks who respect and emulate the Jewish religion. Speaking of the Jews of Antioch, Josephus writes, "they were constantly attracting to their religious ceremonies many Greeks, and these they had incorporated in some measure with themselves" (*JW* 7.3.3).

Further, the life of the synagogues of some of these diaspora communities reveal more evidence for the appeal of diaspora Judaism to non-Jews. Acomonea in Asia Minor, for example, had a gentile benefactor, Julia Severa. Sardis itself is evidence of the popularity of Judaism, at least in that city. Also, the NT, particularly the Acts of the Apostles, speaks of a class or group of gentiles, called "God-fearers," who can be found in and around the diaspora synagogues. While there has been some debate about the existence of such a group this does accurately reflect the interest Judaism had in the diaspora setting among non-Jews (Overman 1988). An inscription from Aphrodisias

which mentions certain "God-fearers" (Gk *Theosebes*) may in fact represent a group of gentile sympathizers. However the inscription was not found *in situ*, and a number of other questions remain (Reynolds and Tannenbaum 1987; Gager 1986).

The presence of "God-fearers" of "proselytes" around the synagogue does not suggest, as Martin Hengel claimed in an astonishing sentence, that Judaism "had to stoop to constant and ultimately untenable compromises" (1974, 1: 313). On the contrary, diaspora Judaism and Greco-Roman culture engaged in a lively exchange and religious and cultural give-and-take for a number of centuries. The attraction and on occasion conversion of many in the gentile world to Judaism is proof of the vitality and strength of Judaism in the diaspora. Further, it demonstrates how well these diaspora communities engaged, adopted, and transformed certain elements of the broader Greco-Roman world, in order to forge a resilient and diversified Judaism in the great cities and centers of the diaspora.

L. Philo

One of the primary sources for Jewish life in the diaspora is Philo Judeus. Philo was a wealthy and influential Jew of Alexandria who left an extensive body of literature. Much of Philo's work is devoted to explaining Judaism to a gentile audience. In this regard Philo faced the same essential task faced by most diaspora communities. In his treatment of the Jerusalem Temple Philo not only spiritualized and placed the Temple in a neo-platonic framework, but he explained the Temple as if he were addressing an audience which had little or no knowledge of it. This theme is carried throughout most of Philo's work. According to E. R. Goodenough, Philo's *Embassy to Gaius* and *Against Flaccus* comprise part of Philo's apologetic literature. It has been suggested that in these two documents we find more autobiographical material concerning Philo, and they are thus a source for understanding Philo the man, as well as the philosopher and statesman (Goodenough 1940 34ff.).

As the title indicates, his *Apology for the Jews* also falls into this category of apologetic material, as does his short essay on the *Contemplative Life*. An important document in the Philonic corpus that intended to introduce a gentile audience to the substance of the Jewish faith and life is Philo's *Life of Moses*. In this work Moses emerges as the ideal figure, prophet or hero. It is worth bearing in mind that simply because Moses is defined in "Hellenistic" terms and depicted in so-called Hellenistic guise, even to the point of being called a "divine man," this does not suggest that this work is intended strictly for a non-Jewish audience (Tiede 1972: 107ff.). Philo's language and thought also provide insight into the nature and philosophical worldview of diaspora Jews as well as gentiles in Alexandria.

Philo treats Moses and Israel's patriarchs in such a way as to stress their virtue *(arete)*, in accordance with the dominant ethics and values of Hellenistic Stoic philosophy. In his treatment of the great men of the Jewish tradition, Philo appeals to the widely accepted and reiterated paradigm of Cynic-Stoic ethics and ideals. It is the virtue and wisdom of Moses, and then of Abraham, Isaac and Jacob, which elevate them to the level of ideal men. Similarly, Moses is portrayed as the ideal lawgiver, priest, king, or *man of God*.

Philo's ideal treatment of the patriarchs can be seen in the second major division of his work, the *Exposition of the Law*. This division of Philo's work comprises at least 9 treatises; *On the Creation of the World, On Abraham, On Isaac, On Jacob, On Joseph, On the Decalogue, Special Laws* (in 4 books), *On Virtues*, and *Rewards and Punishments*. This is the major portion of Philo's work, and it is his distinctive treatment of the law and related themes and heroes which has in many circles become the hallmark of Philo's work. Throughout this multi-volume work Philo tries to align the history, heroes, and laws of Israel with the widely accepted laws and philosophy of the broader Greco-Roman culture. *On the Creation of the World*, for example, appears to be patterned on Plato's *Timaeus*, and utilizes such venerable Greek philosophical notions as the *logos*, natural law, and Platonic forms. Similarly, *On Virtues* provides a general summary of Jewish legal principles according to classical Greek virtues.

In *Special Laws*, Philo takes up specific issues relating to Jewish law. These four books follow the *Decalogue*, where Philo has said all other laws follow from these ten. Concerning Jewish law, Philo's treatment of circumcision is of particular interest. In *Special laws* I Philo, as is characteristic of his work throughout, allegorizes Jewish circumcision in a way which diverts attention from the act of circumcision itself and focuses instead on the symbolic value of the act. Philo writes that circumcision is "the excision of pleasures which bewitch the mind. . . . The legislators thought it good to dock the organ which ministers to such intercourse, thus making circumcision the figure of the excision of the excessive and superfluous pleasure, not only of one pleasure, but of all the other pleasures signified by one, and that the most imperious." Throughout his work Philo allegorizes the command and act of circumcision, characterizing circumcision as a nearly, but not quite, symbolic circumcision of one's ethics, if not one's heart; (*Spec Leg* I.305; *Migr.* 92; Borgen 1987). Indeed for Philo, the symbols and traditions of historic Judaism, whether the Temple, scripture, or levitical rules, are almost always transformed into symbolic categories that appeal to both Jews and gentiles in his Alexandrian setting.

Philo represents the fusion of Hellenistic philosophy, notably Stoicism and Neoplatonism, with the historic faith and figures of Israel. In the hands of Philo, the religion of the Jews becomes an *oikoumene*, a monotheistic religion that can embrace and contain the religions and philosophies of the world. The timeless truths, precepts, and virtues of the cosmos are contained in the traditions and religion of the Jews. Philo brought profound expression to this claim in his corpus. A primary vehicle for promoting and explaining Judaism, whether to Jews or non-Jews, was his treatment and exposition of scripture. *On Virtues, On Special Laws, Questions and Answers to Exodus, The Life of Moses* and more reveal that scripture, in the form of the LXX, was a central source of authority for Philo and the window through which he could, with the help of his creative, allegorical, and symbolic exegesis, reach his audience.

M. The Bible Rewritten

An important and widespread phenomenon within Judaism in the Greco-Roman period was the appearance of

a number of documents that retold the stories and history of the Bible. Sometimes this reiteration of biblical stories and heroes took the form of copying a genre derived from the Bible (Psalms, Apocalypses, histories), or these stories and figures were passed on in the form of narratives that constituted a cross between biblical histories and ancient romances. *Joseph and Asneth, 3* and *4 Maccabees* and the *Testament of the 12 Patriarchs* are examples of the latter. These are Jewish narrative writings which are supported and inspired by canonical stories and figures.

The Jews of the postbiblical era were not the first to engage in this work. Within the Hebrew Bible, Chronicles is the first book to draft a rewritten history of Israel. This type of literary activity flourished in the Greco-Roman period. Much of this vast body of material has been collected and edited by J. Charlesworth in *OTP.* This literature comes forth with such force that one would be remiss not to represent it as a significant aspect of Jewish religion and life in the Greco-Roman period. Documents such as *Pseudo-Philo, Jubilees, Paralipomena of Jeremiah,* the *Ascension of Isaiah,* and Josephus' multivolume *Antiquities of the Jews,* along with many others can all be classified as literature which retells the biblical story in the postbiblical period. Because there is a great deal of biblical material and important interpretation of biblical figures and history in *1 Enoch, 2 Baruch, 4 Ezra,* and of course Philo, these can also be included in this category.

Interpretation of scripture, response to the destruction of the Temple in 70, the casting of Jewish history and heroes in Hellenistic terms, and issues related to eschatology and authority are just some of the themes these documents take up. Some of these works were originally written in Greek, while others reveal they are Greek translations of an earlier Hebrew version. Some works focus on a specific part of the Bible. *Jubilees* retells material from Gen 1:1 through Exod 12:50. *The Assumption of Moses* is a valediction by Moses based on Deuteronomy 31–34; *Pseudo-Philo* is an expansion of accounts in the Pentateuch, Joshua-Judges, and 1 and 2 Samuel; the last 15 columns of the Temple Scroll from Qumran retell a section of Deuteronomy (Harrington 1986).

The 1st century B.C.E. *Psalms of Solomon,* and the 1st century *Odes of Solomon* are both examples of Jewish literature from this period which emulate a genre from the Bible itself. Related to this, many documents from this period seize upon biblical heroes and figures to tell their story, and invest their message with an authority they otherwise would lack. The biblical figure of Jeremiah is such a person in this period, as is his scribe Baruch. The same can be said for Ezra the scribe, Moses, and many of the patriarchs. The message and authority of these texts and stories were supported by appeal to the great figures and stories of Israel's biblical history. The authors and people behind these many texts were clearly biblically centered, though naturally their interpretations varied from text to text and place to place.

The phenomenon of retelling the biblical story, and reiterating and fashioning stories about biblical heroes served a variety of purposes. Each text, and each story from the respective documents, must be examined on its own terms to decipher the purpose and message of this retold history. The books of *2 Baruch, 4 Ezra,* or the *Assumption of Isaiah* are all different with distinct messages. However, within this category of rewritten biblical history and legend, some general comments can be made. First, the retelling of Israel's history was certainly educational (it reminded people of what they might otherwise forget). But more importantly, this phenomenon points to the issues of self-definition and understanding. The widespread phenomenon of rewriting the Bible in this period was a result of the need on the part of Jews both at home and in the diaspora to clarify who they were, whose they were, and what the future held for them. One understands oneself primarily through the past in which one places oneself. This is clearly the case with many Jewish communities in this period. By appeal to the past, and the recasting of scriptural history and Israel's biblical heroes, a variety of Jewish communities were able to redefine and redirect themselves.

N. Testaments and Apocalypses

Related to the phenomenon of rewriting the Bible, or retelling Israel's history, is the growth of two similar types of literature in the Greco-Roman period, one commonly called "Testaments" and the other "Apocalypses." These categories are somewhat artificial. Some "Apocalypses" are not technically apocalypses, and some "Testaments" are not testaments as such (Kolenkow 1986). Most of this, however, is essentially the result of scholarly debates over names and genres that historically have been rather arbitrarily assigned to this literature. The literature of Enoch; the *Sybylline Oracles;* the *Testament of Moses;* the *Apocalypse of Abraham;* certain literature from Qumran and from Paul (1 Thessalonians); and the early Jesus tradition (Q; the Gospel of Mark) are among the many documents which represent this social and literary development within the Judaisms of this period. Along with the new edition of much of this literature edited by Charlesworth, there has recently been a renewed interest in the scholarship and study of many of these documents (see Collins 1987).

In addition to being in some sense scripturally oriented this literature also reflects the importance and persistence of apocalypticism within several of the Judaisms of the Greco-Roman period. Most of these texts, *2 Baruch, 4 Ezra,* the Apocalypses and Testaments mentioned above, and many more documents reveal the prominence and importance of apocalyptic. In addition to the long-held connection between wisdom literature and apocalyptic, some of the basic traits of apocalyptic are a highly developed eschatology, belief in heavenly visits, revelations, and the tenaciously held belief in the in-breaking of God in the near future. God's action is usually expected to amend the difficulties of the present, judge the offenders of the author and community, and vindicate the "righteous." Apocalypticism usually envisions a decisive end to the present order, and it is compatible with both a levitical system such as Qumran, or an antinomian Judaism such as Paul's.

Recently scholarship has come to recognize the role political oppression and struggle played in many of the apocalyptic documents and movements (Horsley 1987). The role of political domination and the impact of Roman imperial power and rule should not be underestimated in evaluating the shape and nature of various Jewish move-

ments and literature in this period. The Testaments and Apocalypses, along with several of the groups mentioned above, are powerful testimony to this reality within Judaism in the Greco-Roman period.

The final throes of apocalypticism can be seen early in the 2d century C.E. *The Apocalypse of Abraham,* the Book of Revelation, *2 Baruch,* or *4 Ezra*—and in a more overtly political sense, the Bar-Kokhba revolt—represent the final act of apocalypticism within Judaism. By the second half of the 2d century and the dawn of the rabbinic period, documents with an apocalyptic orientation all but disappear. While there is a small amount of evidence of apocalyptic in rabbinic literature, rabbinism generally avoided apocalypticism (Saldarini 1975). As a major tendency in Jewish religion, the apocalyptic worldview did not survive the 2d century, at least in the literature, and can be restricted to having played a role—a major role—within Judaism of this formative and fluid period, but not beyond.

O. The LXX and the Role of Scripture

Among the contributions made by the many different forms and varieties of Judaism in this period, one of the most enduring was the translation and interpretation of the Hebrew Bible into Greek; the so-called Septuagint (LXX). The translation and origin of the LXX is related in the highly stylized work, *The Letter of Aristeas.* Aristeas tells the story of the request by Demetrius, head of the library at Alexandria, to Ptolemy II (285–246 B.C.E.) to send a delegation to Jerusalem asking that the High Priest Eleazar appoint 6 elders from each of the 12 tribes, "who possess skill in the law and ability to translate," in order to render the Hebrew text of the Bible into Greek (39) (Orlinsky, *CHJ* 2: 534–62). This translation was to be deposited in the royal library.

The letter goes on to tell about the translation itself and the enthusiastic reception it received from "all the people" when it was read aloud. *Aristeas* 308–11 claims that the translation received a great ovation, and the priests and elders declared that it was so good (accurate) that no revision of any sort should take place: the text should stand as is. The section concludes by noting that this work "should be preserved imperishable and unchanged forever." The repeated claims of authority and authenticity concerning the translation suggest that the LXX did not receive an immediate and ubiquitous reception. Clearly the author of the *Letter of Aristeas* offers an apology for the LXX and its inspired, accurate, and abiding status. The author hopes the translation will be viewed by Alexandrian Jews as their inspired holy writ.

It is undeniable, however, that the LXX quickly became the Bible of diaspora Jews. The authors of the NT use the LXX. Paul and Luke, for example, make extensive use of it and demonstrate far more than a passing acquaintance with it.

To speak of *the* LXX (i.e., in the singular) is misleading for it suggests that there was *one* LXX which came into being at a particular point in time and in one place. The LXX, despite the myth recorded in *Aristeas,* was not a single, fixed document in the mid-3d century B.C.E. There were many manuscripts and transmissions, and certain books were rendered into Greek at different times by different people. Isaiah, for example, may be 100 to 150 years later than the Pentateuch. The various authors, translations, and versions of the LXX, or parts thereof, are expressions, or *interpretations* of a type of Judaism in a diaspora setting.

Josephus' use of scripture is an interesting case in point. Which text and language(s) Josephus used when referring to biblical passages is still contested among scholars (Feldman 1984: 130ff.). At points, apparently, Josephus used some form of a Greek translation of the Hebrew, some version of the LXX. Philo used the LXX extensively, but rewrote it freely and continued to provide new formulations and emphases (Collins 1983: 12). Authors from this period who refer to biblical passages in the Greek do not often agree on the content, let alone the message or interpretation of the text.

According to Philo, by the mid-1st century C.E. in Alexandria, there was a holiday that celebrated the translation of the LXX, in which both Jews and Greeks participated (*Vita Mos* II.41). Given this claim, even if exaggerated, and given the extensive use of the LXX by Philo and others throughout the Greek-speaking world, it is plausible to conclude that the LXX was read and received throughout the diaspora as the diaspora Jewish Bible or "holy writ." As V. Tcherikover (1958) observed, the *Letter of Aristeas* stands near the beginning of a long process of cultural and religious development within diaspora communities. Philo, on the other hand, may well stand at the apex of this historical and theological development within diaspora Judaisms. That development was Judaism, in varying forms and shades in the diaspora, presenting traditional Jewish monotheism combined with a universal philosophy inherited from the Greco-Roman world. For these communities, the Greek Bible was their centerpiece. Interpretation, allegorization, and the integration of these scriptures with the dominant philosophies of the day became the hallmark of diaspora literature. While Jews in the diaspora laid claim to the scriptures and stories of Jews in Palestine, they were not finally reading, or hearing, the same Bible. The LXX is related to the Hebrew text(s), but it is not the same. Any translation is by necessity an *interpretation,* and the LXX is no exception.

While the tendencies of the LXX interpreters are still not fully understood, the work done on LXX Isaiah provides an example of this broader point concerning the LXX. The agenda of LXX Isaiah included advocacy for the inclusion of non-Jews and the consistent expansion of the Greek concept of *nomos* to include certain connotations which were part of the language and ethos of Hellenistic philosophy and religion (Seeligmann 1948; Olley 1978). The translator(s) of Isaiah emphasized the importance of constructive interaction with non-Jews. Therefore it is not surprising that LXX Isaiah provides a prominent place for the central Greek notion and term *oikoumene.* In the hands of the translators, LXX Isaiah articulates a worldwide monotheistic religion that combines traditional Hebrew stories and belief with Greek philosophy and religion. In order to accomplish this the translators had to transform salient notions and terms from the Hebrew text to better fit the message and the world in which the message was to be conveyed. While LXX Isaiah is clearly related to its Hebrew antecedent, it provides an interpretation, not simply a reiteration, of the religion and life of that Hebrew

text. The LXX is not the same Bible as its Hebrew counterpart, but rather provides an *interpretation* of it.

The importance of the translation and impact of the LXX is difficult to overstate. The literature, holy writ, and traditions of Judaism(s) which were historically tied to Palestine became easily accessible, and in many places were enthusiastically received in the broader Greco-Roman world due to the Greek Bible. Moreover, the LXX also signals the emergence of the importance of scripture generally within many Judaisms during this period (regardless of whether those scriptures were in Greek or Hebrew). In the Greek-speaking world the importance of scripture for Philo, Paul, Luke, or a host of Hellenistic Jewish authors is unmistakable (Holladay 1983; Collins 1983). For Qumran, *2 Baruch, 4 Ezra,* and Josephus, the importance of scripture and the scriptural tradition emerges with force. While not always citing scripture explicitly, it is clear these authors, and whoever it is they address or represent, assign significant importance and authority to these scriptural traditions.

The emergence of the role of scripture for apologetic and polemical reasons, as well as for the purposes of self-definition and education is an important feature of many Judaisms in this period (Overman 1990: 23–30). The precise meaning and use of the notions of "scripture," "law," and the "traditions" about scripture and law vary from place to place and from author to author. These are not static or fixed ideas and categories. Various Judaisms naturally understood and interpreted these concepts, texts, and traditions differently. However, they all assign authority and prominence to this scriptural tradition with Jewish history and culture, however they understood it, and they all use that tradition to define, defend, and articulate *Judaism* as they understood it and practiced it.

PALESTINIAN JUDAISM

Judaism emerged in Palestine during the period following the return from Babylonian exile in 538 B.C.E., and Palestine remained a center of the reigious, cultural, and intellectual development of Judaism for centuries. The chronology of Judaism's development in Palestine can be broadly outlined. The textual sources for emerging and developing Judaism can be categorized by type. And the major issues which united and divided Jews in this period can be examined as evidence of the unity and diversity of Palestinian Judaism.

A. Chronology
1. Where to Begin
2. Where to End
3. Some Important Midpoints
B. Nature of the Extant Sources
1. Individually Authored Writings
2. Writings of an Identifiable Group
3. Pseudepigraphic Writings
4. Rabbinic Writings
5. Nonliterary Sources and Non-Jewish Writings
C. Issues Which United and Divided
1. The Temple and Its Priesthood
2. Scripture and Its Interpretation
3. Foreign Domination and Its Termination

A. Chronology

1. Where to Begin. While the idea of "Judaism" as denoting the way of life of the Jewish people or a portion thereof is *traditionally* traced back to the revelation of the Torah to the Israelites at Mt. Sinai in the time of Moses, historically it can be traced back only to the period following the return from the Babylonian Exile in 538 B.C.E., commonly referred to as the Second Temple period. While the Gk term *ioudaioi* for Jews (rather than simply Judeans) is first attested in inscriptions from the 3d century B.C. in Ptolemaic Egypt, the Gk term *ioudaïsmos,* from which the English "Judaism" derives and for which there is no ancient Hebrew or Aramaic equivalent, is not attested until the 2d century B.C.E. Then it first appears in the context of recounting the struggle, internal as well as external, between Judaism and Hellenism during the Maccabean Revolt of 167–164 (2 Macc 2:21; 8:1; 14:38). Although the history of Judaism is very much rooted in the Hebrew Bible, it is neither synonymous nor simply continuous with that text. Rather, the matrix of beliefs, practices, and institutions that comes to define the subsequent history of Judaism in all its diversity may be said first to take recog-

nizable shape in the context and as a consequence of the extended and complex encounter between Israelite society and the broader international cultural matrix we call Hellenism.

That encounter was to have a deep impact on virtually every aspect of Israelite society and culture, albeit to varying extents in different locations and at different socioeconomic strata. Its beginnings may be dated roughly to the conquest by Alexander the Great in 331 B.C.E. of Palestine and the surrounding Mediterranean lands in which Israelite diasporan communities were already found or soon to be established. That historical juncture, more simply denoted as the beginning of the 3d century B.C.E., marks therefore the opening bracket of the present survey, even though the preceding period will be regarded as its backdrop.

2. Where to End. The concluding historical bracket for present purposes is more difficult to determine. Postbiblical Judaism was not consolidated, in relative terms to be sure, until the emergence of the rabbinic movement as the dominant religious force in Jewish society in the centuries following the destruction of the Second Temple in 70 C.E. That process of transformation had roots in the period preceding the destruction and was accelerated as one of its consequences; but it only comes to literary expression in the 3d century C.E., starting at the beginning of that century with the "publication" by Rabbi Judah the Patriarch of the Mishnah, a pedagogic digest of rabbinic rules *(halakhah)* accompanied at times by exemplifying narratives *(aggadah)*. While both those rules and narratives may derive from the actual teachings and deeds of sages of the preceding centuries, in their present rhetorical refiguration they attest most directly to the social and intellectual agenda of the early 3d century patriarchate in its program of solidifying the rabbinic class and extending its influence into the larger Jewish society of Palestine. To a lesser extent, they attest to the Jewish diaspora, notwithstanding resistance from within and without rabbinic circles.

The ancillary, less-tightly structured Tosephta, or supplement, to the Mishnah not only gives us a sense of the Mishnah's high degree of rhetorical redaction, but also of the extent to which its succinct laws and narratives required the amplification of interpretation. In other words, most of what we think we know of the lives and teachings of the mishnaic sages known as the *tanna'im* (first 2 centuries C.E.) has been filtered through the works of the postmishnaic *amora'im* (3d through 4th centuries C.E. in Palestine). The same can be said for the other major rabbinic constructions of the 3d century, those being the earliest collections of rabbinic scriptural commentary or midrash (the Mekiltas, the Sifra, and the Sifres); while incorporating traditional raw materials with long prehistories, they configure them according to the pedagogical plans and purposes of those 3d-century documents.

We therefore have virtually no internal or external direct witnesses to Judaism of Palestine between the year 90 C.E. and the early 3d century (the major exception being the letters and other archaeological finds associated with the rebel leader Bar Kokhba/Kosiba from around 132–135 C.E.). If we wish to look critically at post-Temple Judaism we must extend our sights into the early and mid 3d century C.E., from whence our first literary evidence derives. It is also then that the important institution of the synagogue, having had a history extending at least as far back as the 3d century B.C.E. (but in Ptolemaic Egypt), now emerges into clear archaeological view on Palestinian soil. But there is another reason for including the 3d century within our historical brackets, and that has to do with the ascension of Christianity in the late 3d and especially early 4th centuries, boosted by its new toleration, then advocation, by the Roman empire initiated by the Emperor Constantine (d. 337). For it is around then that Palestinian Judaism's continuing transformation has to be seen no longer mainly in terms of its encounter with the high culture of pagan Hellenism (first Greek and then Roman), but in its encounter with an increasingly self-confident and assertive Hellenistic Christianity—which had appropriated for its own elect self-understanding the very symbols and scriptures that Judaism had once thought were its alone.

3. Some Important Midpoints. If the 3d century B.C.E. marks the beginnings of an intensive encounter between Judaism and Hellenism, and the 3d century C.E. marks a relative solidification of that transformation as it prepared to face a new (and in many ways more serious) challenge, then this crucial 600-year period in the history of Judaism may be divided virtually in half by the destruction of the Jerusalem Temple by Rome in 70 C.E. Before that date, the many varieties of Judaism defined themselves, whether positively or negatively, in relation to the paramountcy—religious, social, and political—of the Temple. After that date, the single variety of Judaism that eventually survived the Temple's loss did so in part by providing compelling alternatives to its priestly functions and functionaries, even while preserving the symbolic power of its memory in new or refigured forms of religious enactment. Once again, notwithstanding rabbinic Judaism's important roots in and similarities to at least some varieties of late Second Temple Judaism, it is neither synonymous nor simply continuous with any of them.

Finally, two other watershed events, already mentioned, subdivide the two halves of our story, with each event centering on the Jerusalem Temple, in the first instance as a presence to be contested and in the second as an absence to be restored: the Maccabean Revolt in 167–164 B.C.E. and the Bar Kokhba Revolt of 132–35 C.E. The Maccabean Revolt can be seen with hindsight as a successful struggle to prevent the complete Hellenization, voluntarily from within and under compulsion from without, of Judaism as centered in the Temple and its city of Jerusalem. However, the revolt's larger goals of a complete end to foreign domination and the restoration of Israelite sovereignty were only briefly to be achieved; they were frustrated by Rome's conquest of Palestine in 63 B.C.E., when the Hasmonean descendants of the Maccabees were effectively removed from power and replaced by Rome with the Idumaean Herod and his incompetent and insensitive Roman successors. But the hopes engendered by the Maccabean Revolt of a complete national and religious redemption yet to come remained very much alive, albeit in a variety of forms, contributing to the sequence of events that led to the Great Revolt against Rome in 66–74 C.E.

The Bar Kokhba revolt, some 60 years later, can be seen not only as a military failure to restore the ravaged Temple and its city to their former states of glory. More important,

it was a shocking repudiation of the very hope that an end to the present order of foreign domination could be expected soon or could be hastened by human acts on the political plane of history. The tragic consequences of the Bar Kokhba revolt were to be a major contributing factor in the full-fledged emergence of rabbinic Judaism, both socially and literarily, during the next century.

B. Nature of the Extant Sources

Our ability to describe ancient Judaism of Palestine, both in its overall character and in its more specific varieties, is severely hampered by the nature of our ancient sources. The difficulties of using rabbinic writings, the earliest of which can be dated in the 3d century C.E., to reconstruct the history of Judaism in the period of the Second Temple have already been noted. In the Second Temple period itself, there is a rich abundance of Jewish sources of diverse types and from a variety of socioreligious perspectives, yet these do not make historical reconstructions less complex: These very differences in perspective produce pictures that are often in discord with one another when they overlap and that leave gaping holes when they do not. These sources are mainly literary and can be divided among 3 types of "authorship": (1) works of named individuals, (2) ideological expressions of an identifiable group, and (3) writings pseudepigraphically attributed to a biblical seer.

1. Individually Authored Writings. In the first category are works by only two known Palestinian Jewish authors: the early 3d century B.C.E. wisdom collection of Yeshua Ben Sira (included in the Apocrypha), and the late 1st century C.E. Jewish history *(Antiquitates Judaicae)*, account of the revolt of 70 C.E. *(Bello Judaico)*, defense of Judaism *(Contra Apionem)*, and autobiography *(Vita)* of Flavius Josephus (37–ca 100 C.E.). Josephus, although he lived most of his life in Palestine, produced all of his works in Rome, in part under Roman patronage and largely as apologia, whether for Rome's conduct in the war, for his own conduct in the same, or for Judaism against pagan vilification.

These two writers, while having lived in very different times and having produced very different types of writings, had much in common: They were both members of a priestly, aristocratic, significantly Hellenized, and politically active Jewish intelligentsia, and considered themselves to have been divinely inspired mediators of Israel's scriptures, teachings, and history to their respective times of transition. Ben Sira gives a firsthand view of Hellenized scribal wisdom during the seeming calm before the Maccabean storm. Josephus provides the sole continuous narrative history of postbiblical Judaism, drawing upon extensive Jewish and Roman sources as well as personal experience. In seeking to extend the story of Israel from its biblical beginnings into his own stormy time, Josephus draws his models from the conventions of non-Jewish Greco-Roman historiography. In the course, however, he provides extensive descriptions of the major varieties of Judaism of the period between the Maccabean Revolt and the destruction of the Temple.

For both Ben Sira and Josephus, it is difficult to determine to what extent their writings are broadly representative of Jewish society and culture of their times, or to what degree they are limited by the skewed vantage of their particular personal, political, or social circumstances. For example, when Ben Sira (38:24–39:11) provides a glowing encomium to the sagely Jewish scribe (our only such ancient description) as one who is financially independent enough to devote himself to piety, learning, worldliness, and political influence, is he describing himself; the scribal class of his time; or some ideal type? Similarly, given Ben Sira's strong priestly proclivities, are we to assume a close if not inseparable link between Jewish scribalism and the priesthood in his time or only in himself?

Likewise with respect to Josephus, on whom modern historians are so dependent in reconstructing so many aspects of Jewish history and Judaism of late Second Temple times: To what extent are his schematic portrayals of Judaism's 3 or 4 "philosophies" or "schools" *(hairēseis)*, as he calls them (*JW* 2.119–66; *Ant* 13.171–73; 18:11–25; *Life* 10–12), colored by his desire to present Judaism in philosophical terms attractive to a Hellenized audience (whether Jewish or non-Jewish)? Does he wish to suggest apologetically that all of the respectable Greco-Roman philosophical currents of his time can be found among this one people, or to argue polemically on behalf of one of those philosophies, namely the Pharisees, as the most attractive and responsible occupiers of the moderate middle way? Similarly, to what extent may Josephus' portrayals of the various Jewish nationalist insurrectionists of the 1st century C.E.—groups for whom we have hardly any other sources—be taken at face value? This applies especially to those involved in the revolt of 70 C.E. To what extent should Josephus' views be tempered in light of his desire to remove blame for the failed revolt and its disastrous consequences from Rome, from the Jews as a whole, or from himself, and place it squarely on these irrational hotheads?

2. Writings of an Identifiable Group. If in the first category there are only two named Jewish individuals whose works have been preserved, in the second category there is only one Second Temple Jewish group whose own writings have survived. That is the community at Qumran, usually identified with, or at least thought to be a part of, the Essene movement, long known secondarily from ancient sources (Josephus, Philo of Alexandria, and Pliny), but whose own writings, included among the Dead Sea Scrolls, have only recently come to the light of scholarship and publication. Which of these scrolls are the product of, and therefore directly reflective of, this community, its history, practices, and ideology, and which were simply preserved in their library, the products of different times or groups? Turning to these scrolls for which there is a consensus that they are indeed "sectarian," to what extent are their representations of the past events and present practices of the Qumran community to be trusted, and to what extent are they idealized or stylized projections either from present self-understandings to past origins, or from future expectations to present circumstances?

The difficulties in employing the specifically "sectarian" Dead Sea Scrolls for historiographic purposes apply not only to our reconstruction of the Judaism of the Qumran community itself and its satellite "camps," but also to our understanding of Second Temple Judaism more generally. Since the Qumran community is the *only* Second Temple group from which we have substantial firsthand data, it is

tempting (indeed often necessary) to extrapolate from it to other varieties of ancient Judaism, or to the overall character of Jewish life and institutions, about which we have much less direct evidence. Yet given the highly rhetorical and introverted nature of these writings, such extrapolation poses great difficulties. To what extent should we presume that this group defines the nature of Jewish "sectarianism" more generally? For example, might we surmise that other such groups (Pharisees and early followers of Jesus) were similarly organized or similarly viewed themselves in absolute distinction from those outside their community and from the institutions centered in the Temple? To what extent can we use these scrolls' denigrative symbolic allusions to other groups (perhaps the Pharisees and the Sadducees) to inform us of the nature of those groups? To what extent can we infer the nature of "normative" Jewish practice (to the extent that such existed, at least in the Temple and under the influence of its priesthood) from the community's self-defining repudiation of those practices?

3. Pseudepigraphic Writings. The third type of literary sources, of which we have the largest number, are those that are attributed to a venerated biblical authority (e.g., Enoch, Abraham, the 12 patriarchs, Moses, Solomon, Baruch, Daniel, Ezra). Such a pseudepigraphic writing may convey an account of a heavenly vision (apocalypse) or divine revelation which was vouchsafed to a biblical seer, perhaps hinted at but never fully recorded in what came to be considered canonical Scriptures. Or it may convey the concealed final words (testament) of exhortation and prediction of a biblical patriarch to his biological or spiritual progeny. For these works, we know the identities neither of their historical authors nor of their historical communities of "readers." To the extent that some of them were preserved among the Dead Sea Scrolls or at Masada, we can connect them, indirectly at least, with a known group which considered them to be sufficiently consistent with their own self-understandings to warrant their copying and safekeeping.

Like the writings of Ben Sira and Josephus, the many pseudepigraphic writings from the period 300 B.C.E.–100 C.E. were preserved by various Christian churches, who considered their hortatory or predictive messages to be particularly appropriate to *their* own self-understandings, often with the added assistance of editorial glosses or reframings. Aside from the Dead Sea Scrolls, archaeological remains, and the sparse ancient testimonies of Greco-Roman pagans, most extant sources for Second Temple Judaism were preserved because they suited the needs of later Christian churches. Presumably much more was written, perhaps of very different nature from what has survived, but was not preserved because it did not suit the canonical tastes of the post-70 C.E. rabbinic and early Christian "victors."

This is not to deny the immense importance of the extensive pseudepigraphic literature that has survived, but to recall how few pieces of the puzzle of ancient Judaism are available with which to reconstruct its picture. The surviving texts often seem to have been produced by, or at least for, small groups that considered themselves to be part of a covenantal elect, notwithstanding their seeming pariah status vis-à-vis the larger Jewish society and its central institutions. Such groups probably sought and found in these pseudepigraphic writings confirmation of their socioreligious self-understandings in terms of a formerly revealed but presently concealed larger divine plan, both moral and historical, whose realization, often thought to be imminent, would redress the present imbalance of power and vindicate their readers' sufferings. The specific literary conceits of such texts were part of their rhetorical message: Their privileged readers could experience being exhorted by ancient covenantal patriarchs and seers, or could gain visionary access to a heavenly, undefiled holy realm, in either case fortifying through the experience of such knowledge their elect self-understandings in the midst of discordant historical circumstances.

But who were such groups? How large or widespread might they have been? What would have been their socioreligious profiles? Might they together have constituted a movement, or should they be differentiated more precisely one from the other? How might they have been related to named groups or individuals known to us from other sources? Or might we be mistaken in thinking in terms of coherent groups at all? Do these writings denote the mood of the time, or reactions to it?

4. Rabbinic Writings. Having previously noted the difficulties of employing rabbinic texts, all edited in their present forms no earlier than the early 3d century C.E., for reconstructing pre-70 C.E. Judaism, let us now stress that even for the period after 90 C.E., for which historiography is largely dependent on rabbinic sources, their historiographic employment is still fraught with problems. Like the Dead Sea Scrolls (from which rabbinic texts obviously differ in many significant ways), we are dealing with a collective, intramural literature that is not the simple product of a single author. Rabbinic texts sometimes explicitly and otherwise implicitly claim to be transmitting an ancestral heritage that goes back ultimately to the revelation at Sinai. However, they are also texts that subtly yet radically transform received traditions so as to attune them rhetorically to the rabbinic movement's program of training new disciples and socializing them through the very dialectic of their Torah studies into a cohesive class which would be confident in its self-understanding as Israel's divinely authorized teachers, judges, and leaders. In so doing, 3d century rabbinic texts may be expected to project such self-empowering rabbinic self-images back—not only onto their considered biblical antecedents, but also onto the rabbinic founding figures (e.g., Hillel, Rabban Yoḥanan Ben Zakkai, Rabbi Akiba) of earlier generations. Notwithstanding this primary, introverted nature and function of early rabbinic texts, they emerge at precisely the time when the rabbinic class itself emerges as a major force in broader Jewish society, largely through the strengthening of the Patriarchate under Judah the Patriarch at the beginning of the 3d century C.E. Under the leadership of Judah and his successors, the newly expanded and solidified class of sages sought to position themselves so as to transform Israel's practices, institutions, and self-understandings along rabbinic lines.

Thus, there are two intertwined transformations underway that not only are reflected in the earliest rabbinic texts but to which those texts discursively contribute: the transformation of rabbinic society itself and that of its relation

with Jewish society more broadly. For this reason, both legal (halakhic) and narrative (aggadic) texts cannot be assumed to be representational of their own historical settings, whether rabbinic or extra-rabbinic, in any simple way. For example, we cannot assume that stories about rabbinic sages happened as told; or that rabbinic rules were broadly normative at the time of their formulation. Rather, such rabbinic representations have to be evaluated in complex relation to the rhetorical nature of their discursive contexts, and wherever possible to the sparse but significant contemporary evidence of extra-rabbinical sources. Only by such critical analysis can historians understand the relation of these texts to the sociohistorical contexts and emerging religious system of which they are to some extent symptomatic, and which they are yet in the process of transforming.

5. Nonliterary Sources and Non-Jewish Writings. The above concentration on Jewish literary sources should not be taken to minimize the importance of our nonliterary sources for Judaism of Palestine of the same period. For the most part, however, nonliterary sources from this period must also be interpreted before they can be employed, and it is usually necessary to interpret them in relation to our known literary sources. Often the pictures derived from nonliterary sources enable us to complement or supplement those derived from literary sources, but just as often they force us to reconsider our accustomed ways of reading and interpreting those literary sources.

For the late Second Temple period, recent nonliterary discoveries of particular significance derive from excavations along the W and S walls of the Jerusalem Temple, from the discovery of Herodian priestly villas nearby, from the Qumran encampment, and from Herod's fortress and palace and the remains of Masada. From the period between the fall of the Temple and the 3d century C.E. there is very little archaeological evidence, except for the important letters, writs, coins, and other finds from the so-called Bar Kokhba caves of Wadi Murabba'at and Naḥal Ḥever. In the 3d century this relative archaeological silence comes to an end with the proliferation of Galilean synagogue remains, coinciding with the emergence of rabbinic literature. Also significant for the period of rabbinic emergence are the archaeological remains of the catacombs at Beth Shearim, and more recently those of the urban centers of Caesarea, Sepphoris, and Beth Shean (Scythopolis). Another important ancillary source, but once again literary, are the scattered references to Jews and Judaism in non-Jewish Greek and Latin writers, both Christian and pagan, although most of these derive from outside of Palestine.

C. Issues Which United and Divided

In light of the above, it is impossible to paint a single picture of Judaism in Palestine in late antiquity. Our sources, for the most part rhetorically written from some partisan position or another, do not permit a simple description of what Jews in general (the man or woman "in the street") of that time believed or practiced. Those common characteristics of Judaism which from an "outside" perspective may be said (and were said) to have distinguished the Jews as a group from the surrounding Greco-Roman cultures and religions (e.g., Sabbath and festival observances, Temple rites, dietary and purity rules, sexual modesty), when viewed from an "inside" perspective may be said to have been precisely the issues which deeply divided the Jews (and hence Judaism) of antiquity. Rather than smoothing over these differences and divisions in order to obtain some composite picture of how ancient Judaism might have looked from an undifferentiating distance, it is preferable to delineate those issues which define both the common concerns and the differing responses that repeatedly recur in our extant sources in all of their diversity of perspective. For the sake of convenience, they may be grouped under three headings.

1. The Temple and Its Priesthood. At the center of Judaism of the Second Temple period was the Jerusalem Temple itself, rebuilt after the destruction of 586 B.C.E. in 515 B.C.E. But this rebuilt Temple was not simply a restoration of what had previously been. Sacrificial worship was now for the first time centralized in one place, even though there were those who thought that cultic centralization need not preclude the establishment of sites of worship and the application of purity strictures elsewhere in Israel. The centralization of sacrificial worship in Second Temple times was in part due to the strictures of the book of Deuteronomy, newly incorporated into a Torah canon, and in part due to the desire of the ruling Persian empire and its successors to locate local political and religious authority in one place and under one leadership, that leadership (with some notable exceptions) having been the Temple's priesthood (see Ezra 1:3–4; 7:13–24). But if the Temple and priesthood benefited from the political and economic backing of the empire, it also functioned at its will. While in covenantal terms the priesthood and their service mediated between God and Israel, maintaining the equilibrium of that tipsy balance, then in Second Temple times they similarly served as mediators between Israel's foreign rulers and its local populace.

Thus, the Temple was now the national center not only of worship, both daily and festival, but also of political and judicial authority—and controversy. It is not surprising therefore that virtually every major conflict, both internal—whether deriving from differences regarding Israel's covenantal duties or from tensions between its socioeconomic strata—and external—between the local populace and its foreign rulers—repeatedly centered on the Temple and its priesthood. Notwithstanding the unifying role of the Temple, to which all Jews were expected to contribute and to which very large numbers flocked for the 3 annual pilgrimage festivals, it was also a source and focus of deep divisions from the very time of its rebuilding. In fact, it may be said that precisely because of its centrality, as the primary national institution and symbol, the Temple was a magnet for national and religious tensions.

From the time of the Maccabean Revolt in particular, Temple-centered tensions intensified: Not all were happy with the Hellenization of its wealthy upper priesthood; not all recognized the genealogical legitimacy of its High Priests; not all considered its practices to be in compliance with proper standards of levitical purity. Some even questioned whether such a Temple, built at the direction of a foreign empire rather than a truly anointed Israelite leader, was a proper divine abode at all. Some participated fully in the Temple services notwithstanding their discontents; others sought to reform it; others attempted to wrest

control from the reigning priesthood. Still others declared their alienation and exile from it, developing alternative forms of worship, alternative purity realms and priestly hierarchies, and even alternative routes of access to a heavenly Temple unsullied by the worldly forces of evil and pollution.

The very centralization of religious worship and authority in the Second Temple necessitated, for some at least, the need for decentralized complements (e.g., the synagogue and Pharisaic fellowship) or alternatives (e.g., the Qumran camp), even while the Temple was still standing. But once it was destroyed, the need to create or locate alternative media of worship and atonement, alternative loci for human access to the divine presence, became even more pressing. In short, how would Israel become a "kingdom of Priests and a holy nation" (Exod 19:6) without its priestly, holy center? The rabbinic response to this crisis was not to discredit the destroyed Temple or its priesthood—quite to the contrary, they kept Temple and priesthood symbolically and intellectually alive—but to shift Judaism's primary focus from Temple to Torah and from priests to sages, and to make of Torah study and practice (including the study of priestly matters and the practice of ritual purity) the central religious acts of which they themselves would be the officiants. Rabbinic Judaism, like that of the Qumran community before it (see 1QS 9:3–6; 4QFlor 1:7), viewed Torah deeds as occupying the central religious place once held by the performance of Temple sacrifices. Even without a sanctuary, Israel could sanctify God's name and their collective life through prayer and the study and practice of His Torah (for examples from early rabbinic literature, see Fraade 1990).

2. Scripture and Its Interpretation. The "returnees" from the Babylonian Exile introduced another change that was to be central in defining and dividing Judaism of the Second Temple period: the establishment of the "Torah of Moses" as Israel's commonly held canonical charter around 450 B.C.E. (Nehemiah 8). Again, this was the consequence not only of internal needs: interpreting their Exile and Return in prophetic covenantal terms, the restored Judean community required the establishment of a commonly acknowledged expression of those terms. It was the consequence also of external, imperial dictates. The Persian empire and its successors (with some notable exceptions) sought to rule its subject peoples by allowing them autonomy of local rule under their own laws and legal authorities, to which the empire would lend its authoritative backing in return for payment of taxes and peaceful conduct (see Ezra 7:25–26; and the "Passover Papyrus" from Elephantine).

But the composite and didactic nature of this Torah text, with its many repetitions and gaps, required that it be interpreted and amplified before it could be societally implemented in any systematic way. Most immediately such interpretation was required to set the Temple and its priesthood on their properly functioning courses: the Temple's plan, the sacrificial procedures, the priestly rotations, the cultic-festal calendar, purity strictures, etc. But other areas of Israel's covenantal obligations also needed to be regularized to the extent possible: Sabbath, diet, tithing, marriage and divorce, etc. The authority to interpret and adjudicate Torah law rested with professional scribes closely associated with the priesthood.

Naturally, those groups that questioned the central priesthood's legitimacy or conduct also questioned the authority and interpretations of their allied scribes. They propounded and practiced alternative rules (to them they were not the alternatives but the originals), and would justify their rules through the citation or rephrasing of Scripture. But often they simply claimed that their rules had been divinely conveyed through a prophetic teacher; or through a long-hidden revelatory writing by an ancient biblical seer which they were now privileged to possess, to read, and to follow.

Such disaffected groups would also comment upon, but more often simply "rewrite," biblical narratives, poems, and prophecies in such a way as to justify their self-understandings as the true inheritors of Israel's covenantal code—the central actors in Israel's sacred history. That history they might interpret, not simply as a continuous line from the biblical past to the historical present, but as a prologue to the imminent consummation of history by a reenactment of the primeval cataclysm in which God vanquished the forces of evil and vindicated the persevering righteous few.

How precisely such rewritten scriptures were understood in relation to what came to be considered canonical Scripture is not always clear: Were they complements, supplements, or substitutes? The Qumran community in some writings seems to have distinguished between Scripture and its commentary or interpretation (e.g., the *pesharim,* and the scriptural citations of the Damascus Document), while in others it seems to have substituted rewritten Torah for Torah (e.g., the Temple Scroll). The Pharisees, according to Josephus and the NT, viewed the nonscriptural legal traditions of which they were the self-proclaimed advocates and authorities as the inherited "traditions/laws of the elders/ancestors" (*Ant* 13.297, 408; 17.41; Matt 15:2; Mark 7:3, 5), for which they claimed divine authorization (*Ant* 17.41). Later rabbinic writings, beginning in the 3d century C.E., redrew this distinction as being one between written Torah and oral Torah. *Both* were revealed by God to Moses and Israel at Mt. Sinai, and the two together constituted the complementary totality of revelation: Written Torah was closed and forever immutable, while its oral (rabbinic) amplification was open and forever fluid. Implicit in these differences in approach to Scripture and its supplementation was the question of the continuity of revelation: How and by whom was new knowledge—whether of correct conduct, of the cosmos and humanity's place therein, of divine justice, or of Israel's sacred history—to be revealed? And what was the relation of such newly revealed or discovered knowledge to that which was commonly acknowledged as Israel's Torah?

But another important development, evidenced already in the Dead Sea Scrolls (1QS 6:6–8; 8:12–16), comes to full expression in early rabbinic literature: The very engagement in study, whether of the Torah itself or of its authoritative amplifications, could itself be experienced as a redemptive act of divine service—an enactment of the covenant rather than simply the means toward its fulfillment—and this, ideally at least, for a society as a whole and not just for its scribal virtuosi.

3. Foreign Domination and Its Termination. With the help of the classical prophets, the Babylonian returnees and their descendants interpreted their Exile and Return in positive covenantal terms: God had not only punished Israel for its infidelity, but had demonstrated His own fidelity by employing the Persian king Cyrus to redeem a righteous remnant and reestablish both them and His house in Jerusalem. But these very same prophetic understandings engendered the expectation that foreign rule, like foreign exile, would soon come to an end and Davidic rule be restored (e.g., Amos 9:11; Isa 11:1), thereby completing the redemptive plan whose beginning had been so dramatically experienced. As time dragged on, and as one ruling empire was succeeded by another (Persian, Macedonian, Ptolemaic, Seleucid, and eventually Roman), the question "How much longer?" grew all the more urgent. When prophecies seem to fail, or at least to be delayed, the first response is to reinterpret them. Thus, when the Seleucid Antiochus IV upset the equilibrium of Jewish religious and political autonomy, the consequent tumult had to be placed within the received prophetic scheme: Jeremiah's predicted 70 years between Israel's exile and final vindication (Jer 25:11–14; 29:10) had been divinely decoded as 70 weeks of years for the exilic seer Daniel (Dan 9:24–27) so as to point roughly to the time of the Maccabean Revolt. Then Syrian rule, itself encoded as the final horn of the last of four beasts (Daniel 7), would fall, after which Israel's salvation would immediately follow (for similar calculations see CD 1:3–12; *1 En.* 93:9–10).

Even so, what was to be Israel's role in this divine drama now entering its final act? For those who rejected the Hellenizing reforms forced upon them from within and without, there were essentially two alternatives: armed revolt against the Hellenizers and Syrian forces (emphasized in 1 Maccabees), or passive resistance and martyrdom in the face of their edicts (emphasized in 2 Maccabees). But behind this choice lay a more fundamental question: Was Israel's sacred history totally in divine hands—He alone bringing it to its redemptive end, both employing and terminating foreign rule according to His plan? Or did it require some human assistance—a demonstration of the readiness of Israel's pious to rid themselves of the defiling foreign influences in their midst? The Maccabean Revolt, in the context of the most acute encounter between Judaism and Hellenism, brought this dilemma to its first clear expression. Both responses presumed that *divine* intervention would be required to bring the events to their redemptive consummation; the question was the required *human* role in a sacred history that was rapidly approaching its long-anticipated climax.

But once again that climax was delayed, and its delay became even more irksome with the rule of Rome beginning in 63 B.C.E. Although Rome preserved the rudiments of local autonomy, the disintegration of Hasmonean rule meant that Roman rule pressed harder and closer to home in its administrative and military presence in Palestine, and especially in Jerusalem. And since the Roman emperor was regarded as a deity, the presence of his image on coins, statues, and military standards meant that subservience to Rome added religious insult to political injury. A series of skirmishes and insurrections, beginning under Herod's rule (37–4 B.C.E.) and extending through the period of Roman governors and procurators ensued. These stemmed in part from the incompetency and insensitivity of Roman rulers and their agents, and in part from a growing irritability and impatience of the local population. But also to be figured into the volatile situation were growing internal Jewish socioeconomic and religious cleavages and tensions, which often became interlaced with resentment against Roman rule and anticipation of its end.

Many self-proclaimed prophets, miracle workers, and would-be kings (some examples, about whom we know only from Josephus, being the "sophists" Judas and Matthias, Judah the Galilean who founded the "Fourth Philosophy," and a prophetic miracle worker named Theudas) appeared on the scene; they tapped into such popular anti-Roman sentiments only to be cut down, thereby frustrating the expectations that had been placed in them. One such figure may have been Jesus of Nazareth, whose followers, however, maintained and transformed their faith in him after his crucifixion by Rome.

The ignominy of Roman rule, the unrelenting pressures of socioeconomic cleavage, and the intensification of internal religious conflict led many to reflect upon the nature and origins of evil in a world they had been taught was created and guided by an omnipotent and benevolent God. The Deuteronomic scheme of reward and punishment no longer provided an adequate explanation. The sacrificial immune system was no longer up to the job. More radical diagnoses and cures were sought. For those to whom Rome itself epitomized the very force of evil and darkness which ruled the world and under which they suffered, the elimination of that rule would represent much more than just a political release. Jeremiah's 70 years of Babylonian rule, reinterpreted by Daniel to extend to Syria as the last of the wicked beasts, was now reinterpreted to extend to and hopefully terminate with Rome's rule (*2 Baruch* 38).

Once again three alternatives of human response presented themselves: accommodation, passive resistance, and active revolt. According to Josephus, these three paths were followed respectively by, among others, the Pharisees, the Essenes, and the Zealots. With the cessation of the Temple sacrifices on behalf of the Roman emperor in 66 C.E., the political, socioeconomic, and religious combustibles ignited, both in war with Rome and in equally violent internal fighting, resulting after 4 years in the destruction of the Temple and the ravaging of its city, and after another 4 years in the elimination of the last remaining Jewish resistance at Masada.

Once again, some Jews interpreted the catastrophe as an immediate prelude to the end, which would soon come if only Israel returned to the terms of the Torah *(2 Baruch)*, while others counseled that the righteous should simply sit tight while God's inscrutable plan ran its course *(4 Ezra)*. For yet others, the utter failure of the revolt and the dashing of its engendered expectations, the loss of Israel's atoning center, and the intensification of Roman rule with its consequent economic burdens—these were too much to bear. Some were led to apostasy and others to a dualistic renunciation of this world so as to pursue personal salvation in otherworldly realms.

But for many, the hope for the overthrow of Rome on the plane of history, to be followed by the restoration of Jerusalem, the Temple, and Davidic messianic rule, re-

mained very much alive, albeit temporarily deferred. That deferral seemed to some to be coming to an end in 132, when once again the violation by the Roman emperor Hadrian of Jewish religious and political sensitivities sparked a major Jewish revolt under the religio-military charge of Simon Bar Kokhba (actually, Kosiba, his messianic nom de guerre being an interpretation of Num 24:17), whose leadership and possible early successes were understood in redemptive terms. The disastrous consequences of this failed revolt—the building of a pagan Roman temple on the site of the former Jewish temple, the de-Judaizing of Jerusalem and its surrounding Judea, tremendous loss of life, and severe economic hardship—resulted not only in a major (but by no means complete) population shift to the Galilee. It led also, under eventual rabbinic leadership, to an equally significant shift in attitude toward foreign rule and Israel's human role in history.

The post-Bar Kokhba rabbinic sages despised Rome and what it represented, even as they accommodated to the reality of its rule. If, in biblical terms, Israel was Jacob and Rome was Esau, then their struggle in the womb of history would continue, but as one between competing cultures and not armies. That struggle would eventually end with Jacob succeeding on the heels of Esau, but the time for that succession would be determined by God and not humans.

It was not that Israel had no role to play toward that end, but rather that its role was now conceived to lie on the inner rather than outer plane of history. Its internal life, both social and religious, required a radical restructuring and redirecting in accord with the divine plan of Torah (as rabbinically construed). Even while accommodating to the brute realities of the Roman kingdom, Israel could experience the joys of the heavenly kingdom by attuning its collective life to the laws and narratives of the written Torah as interpreted in the oral. Israel's task now was not to rid itself of Roman rule but to bring its collective life under heavenly rule; not to rebuild the centralized Temple but to fashion and frequent decentralized institutions (such as the synagogue) for worship and the experience of God's transcending presence in the midst of historical exile. While Rome was evil and would eventually be removed, battle needed to be waged more immediately with the inclination to do evil within each person. The weapons necessary for bringing that inner evil under control were to be brandished in the communal life of Torah study and practice. As the Roman empire declined and was Christianized, the terms of the struggle and the hope for its eventual termination remained essentially the same, but with Esau reinterpreted—as Jeremiah's 70 years had once been—to refer now to Christendom.

JUDAISM IN EGYPT

The connection of the Jews with Egypt goes back into the distant past of the 2d millennium B.C. The memory of the captivity and the Exodus has been central to the Jews throughout the centuries and has contributed much to the identity of the people. Evidence of Jewish settlement in Egypt comes from a later time, however (Davies and Finkelstein *CHJ* 1: 375–76). Emigration took place around 600 B.C., increased by the capture of Jerusalem and the destruction of the First Temple by the Babylonians in 587. Documentation for this emigration is found in Jer 44:11: "The word came to Jeremiah concerning all the Jews that dwelt in the land of Egypt, at Migdol, at Tah'panhes, at Memphis, and in the land of Pathros . . ."

B. The Hellenistic Period
 1. From Alexander to Ptolemy VI
 2. From Ptolemy VI to the Roman Conquest
C. The Roman Period
D. Status of the Jews

A. Preludes

A series of Aramaic papyri of the 5th century found at Elephantine Island, opposite Aswan in S Egypt, has revealed that there was a military colony of Jews on the island (Davies and Finkelstein *CHJ* 1: 376–400; Sayce and Cowley 1906; Sachau 1911; Porten 1986). They had a temple with pillars of stone and 5 stone gateways. There was an altar for sacrifices to their god Yahu. In addition there are other gods, such as Anath and Bethel. Thus, the religion of these Jews tended to be syncretistic, such as presupposed by Jeremiah in the word of God addressed against the Egyptian Jews: "Why do you provoke me to anger with the works of your hands, turning incense to other gods in the land of Egypt" (44:8). The temple at Elephantine existed before the Persian king Cambyses invaded Egypt in 525 B.C.

An order issued by the authority of Darius II in 419 B.C. instructs the colony to celebrate the Feast of Unleavened Bread and probably the Passover. There are also probably

references on the ostraca found to the Day of Preparation and the Sabbath. The relations between these Jews and their neighbors worsened, and in the year 410 B.C. the priest of the Egyptian god Khnum, the patron god of Elephantine, with the aid of the local Persian commander, Waidrang, stirred up the Egyptians to attack the Jews, destroy their temple, and stop all sacrifice. The Jews wrote to Bagohi, the Persian governor of Judea, and to others, such as the high priest in Jerusalem, Johanan. Another copy went to the Samarian governor's two sons, Delaiah and Shelemiah. In these letters they tried to enlist support for the restoration of the temple. The authorization was given that the "altar house of the God of Heaven" should be rebuilt so that "the meal-offering and incense" may again be offered. Thus no permission of animal sacrifices was given.

In 404 B.C., Egypt revolted against the Persians and won independence. A letter reporting the accession of the Egyptian King Nepherites, written in 399 B.C., is the latest dated document. The earliest dated document was written in 495 B.C. Thus these papyri give direct information covering about a century of the life of this Jewish community, which was founded at an even earlier date.

The Jews were organized as a combined temple community and a sociomilitary community. As members of the military garrison the Jews served together with non-Jews in the same detachment, but the leaders were non-Jews, Persian, and other nationals. The governor and the garrison commander exercised both civil-judicial and military functions. These seem to have been Persian, and so also the police. A person with a Hebrew name was 'Anani the Scribe (and) chancellor at the court of satrap Arsames in Memphis. Although the leaders at Elephantine seem to have been non-Jews, the garrison as such must have been predominantly Jewish, since it was known as "the Jewish force." The Jews had their own priests and other leaders who represented them. One of the leaders had the name of Jedaniah, who was in charge of the communal archives and the temple treasures. Intermarriage with non-Jews is documented, and there was also participation in Jewish observance on the Sabbath by non-Jews who either had become proselytes or were active symphathizers.

The existence of the Jewish temple at Elephantine in Egypt, as well as the Samaritan temple on Mount Gerizim, the temple at Araq el-Emir in Transjordan, and Onias' temple at Leontopolis in Egypt show that the Deuteronomic program of centralized and exclusive worship in the Jerusalem temple was not put into effect among Jews everywhere. The temple and the Jewish military colony at Elephantine testify to a rich variety within Jewish religion and life at the time of Ezra and Nehemiah. Its origin has been connected with the statement in the *Letter of Aristeas* that Jews went as auxiliaries to fight in the army of the Egyptian king Psammetichus against the king of the Ethiopians. The ruler referred to is probably Psammetichus I, who largely relied on foreign mercenaries in his fight for uniting Egypt as an independent kingdom. Some of the Jews who took part in the campaign against the Ethiopians might then have been stationed at Elephantine.

No corresponding line can be drawn of the history of the Elephantine Jewish community after the latest datable document from 399 B.C. No traceable evidence for its continued existence has been found. The community might have been removed from the island. In any case, it disappears from the scene of history.

B. The Hellenistic Period

1. From Alexander to Ptolemy VI (332–181 B.C.). The history of the Jews under Macedonian/Ptolemaic rule falls into two sub-periods, the reign of Ptolemy VI Philometor serving as a dividing line. During the period before the reign of Ptolemy VI Philometor (181–45 B.C.) the Jews settled in towns and in the country and gradually grew in sufficient number to form communities of their own within the general structure of the Ptolemaic society. The period from the beginning of Ptolemy VI Philometor until the Roman conquest (181–30 B.C.) was the time in which the Jews in Egypt fully flourished (*CPJ* 1: 189).

As background, the general political context needs be sketched. Alexander the Great conquered Egypt in 332 B.C., and after his death in 323 B.C. his senior generals, the Diadochi, formed a collective group of rulers. One of the generals, Ptolemy, was satrap of Egypt. When the collective leadership broke up, the empire was divided into 3 main parts: the kingdom of Antigonid Macedonia, the Seleucid kingdom in W Asia, and the Ptolemaic kingdom in Egypt.

Ptolemy I, called Soter, managed to defend his position in Egypt and founded the Ptolemaic dynasty. Egypt became an independent "Macedonian" kingdom, engaged in hard struggle to maintain its independence and to play a leading role in the affairs of the Hellenistic world. Alexandria, the city founded by Alexander, became the capital, and from this N center of Egypt, in close approximity to the other centers of Greek civilization, the Ptolemies ruled over the long and narrow country created by the river Nile. Since the native Egyptians regarded the Ptolemies as an alien government—in spite of all the Egyptian traditions taken over by these rulers—the Ptolemies employed Macedonians, Greeks, and people from other non-Egyptian nations in their administration and army. Moreover, many prisoners of war from various nations were brought to Egypt as slaves (Rostovtzeff 1941, 1: 1–43, 255–422).

In the Seleucid realm, a decentralized administrative system prevailed, built on a reorganization of the old Persian satrapies. The government of Ptolemaic Egypt, on the other hand, became a highly centralized and more ruthlessly efficient version of the ancient Pharaonic system. This reorganization took mainly place during Ptolemy I Soter ([323] 304–284 B.C.) and Ptolemy II Philadelphus (284–246 B.C.). The whole land was the personal possession, the "house," of the king. The first man in the state beside the king was the *dioketes*, who bore responsibility for the entire possessions and income of the king. Egypt had of old been divided into *nomes*, and these into *toparchies*. The local administrative unit was the village. The chief officials were the military *strategos*, and the *oikonomos* for economic matters. The leading officials were usually Greeks and Macedonians (Hengel 1974: 1.18–9).

The encounter of the Jews with Hellenistic Egypt, therefore, took place within the framework of the Ptolemies' military and economic expansions. According to Josephus (*JW* 2 §487; *AgAp* 2 §35) Alexander the Great gave the Jews permission to settle in Alexandria on a basis of equal rights with the Greeks. They received this favor from

Alexander in return for their loyalty to him. Josephus' reports on this do not appear to be credible. They have a clear apologetic motive, and seem to be composed with the aim of ascribing the privileges accorded the Jews of Alexandria to Alexander the Great himself. Josephus' statement about the equal rights of Jews and the Greek full citizens of Alexandria is very much debated in recent research (Tcherikover 1966: 272; Kasher 1985: 2; *CPJ* 1, 1957: 1–3).

Josephus has more reliable information on the immigration of Jews from Palestine to Egypt during the interim period of Alexander's successors, the Diadochi (323–301 B.C.). Ptolemy I Soter conquered Palestine for the first time in 320 B.C.; he conquered it again in 312 B.C., 302 B.C., and finally in 301 B.C. It is probable that in the course of these wars numerous Jewish prisoners were taken into Egypt, as also is told in the *Letter of Aristeas* (12–14). According to Aristeas (12–27, 37), 100,000 Jewish captives were brought to Egypt, of whom 30,000 were placed in fortresses, and the rest, i.e., old men and children, Ptolemy gave to his soldiers as slaves. Ptolemy II Philadelphus (284–246 B.C.) gave amnesty and freedom to the slaves.

Some Jews seemed to follow Ptolemy I voluntarily, as exemplified by the high priest Hezekiah and some of his friends who followed him. Josephus, drawing on material from Hecataeus of Abdera, tells that Hezekiah and the other Jews following the battle of Gaza, 312 B.C., received in writing the conditions attaching to their settlement and political status, and emmigrated (*AgAp* 1 §186–89). The historical value of Josephus' report is disputed among scholars. Recent research has shown, however, that the sections in Josephus, *AgAp* 1 §183–204, do not render material from a Jewish forger but information derived from the work of the authentic Hecataeus, a contemporarian of Alexander and Ptolemy I (Kasher 1985: 2–3; Tcherikover 1966: 272–73 and 426–27). In another passage Josephus (*AgAp* 1 §194) reports that after Alexander's death myriads of Jews migrated to Egypt and Phoenicia in consequence of the disturbed condition of Syria.

The Jews settled all over Egypt, in the towns and in the country. Although living in Egypt, their ties with Jerusalem and Palestine remained strong and communication was made the easier by the fact that for about 100 years (301–198 B.C.) Palestine was one of the Ptolemies' foreign possessions.

Some places, such as in Migdol, Tahpanhes, Noph/Memphis, and the land of Pathros (i.e. the S country) were inhabited by Jews already from the time of the prophet Jeremiah (Jer 44:1). The settlement in various places in Lower Egypt is attested by inscriptions, some of which come from the 3d century. Numerous papyri from the middle of the 3d century and later, give evidence of Jewish population in the villages and towns of the Fayûm (*CPJ* 1: 3). The evidence for Jewish presence in Upper Egypt during the 3d century is meager. The existence of a Jewish community at Elephantine in Upper Egypt until about 400 B.C., Jeremiah's reference to the land of Pathros, and the attestation of ostraca of Jewish settlements in the 2d century B.C. indicate that some Jews lived also in that part of the country during the 3d century B.C. This conclusion is supported by evidence for the existence of a synagogue in Upper Egypt already in the 3d century B.C. (*CPJ* 1: 3–4.8).

Besides this synagogue at an unknown place in Upper Egypt, 3d century synagogues are known to have existed in Schedia, Crocodilopolis-Arsinoe, and Alexandrou-Nesos. Since the synagogues were centers of Jewish religious, political, and cultural life, the reference to a synagogue indicates that there was an organized Jewish community at that place.

The inscription at Schedia (Kafr ed Dauwar, 20 km SE of Alexandria) contains the dedication of a synagogue: "in honor of King Ptolemy and Queen Berenice his sister and wife and their children, the Jews built the *proseuche*." A similar inscription has been found in Crocodilopolis-Arsinoe, the main city, the metropolis, of the Fayûm district (about 100 km S of Cairo): "in honor of King Ptolemy, son of Ptolemy and Queen Berenice, his wife and sister and their children, the Jews in Crocodilopolis (dedicated) the *proseuche*." In Alexandou-Nesos, another town in the Fayûm district, a juridical papyri dated 218 B.C., contains a petition of an unnamed woman, complaining that a local Jew, Dorotheos, had stolen her cloak. She reports that Dorotheos fled to the synagogue holding the cloak. By the intervention of a person by the name of Lezelmis the cloak was deposited with the synagogue verger, Nikomachos, to keep till the case was tried (*CPJ* 1: 8, 239–41; *CPJ* 3: 141, 164; Kasher 1985: 138, 144–46).

What was the nature of these communities? The dedication of the synagogues to the king show that the Jewish communities recognized the king and were recognized by him. The dedications are on behalf of the reigning sovereign in the same way as are the pagan dedications, but direct ruler worship was avoided by the Jews (Fraser 1972, 1: 226–27, 282–83, 298–99, cf. Philo, *Gaium* 137–38, 141–42, 356–57; Jos. *Ant* 12 §67; Kasher 1985: 30, 257, n. 92). The recognition of the synagogue by the king implied that he had given the Jews a legal status as a community, most probably in the form of a *politeuma*.

The settlers from various ethnic groups were in many places organized as such *politeumata*. Such communities in Egypt were the politeumata of Idumaeans, Phrygians, Cretans, Lycians, Cilicians, and Boeotians. The legal status of such a *politeuma* has not been clarified at every point, but basically it was the confirmation by the king that an ethnic community was permitted—within limits—to live in accordance with its ancestral laws. In the case of the Jews, this meant the right to live according to the Laws of Moses (*CPJ* 1: 6–8; Tcherikover 1966: 299–301; Kasher 1985: 30, 41). It is probable that the high priest Hezekiah, who joined Ptolemy in 312 B.C., received the charter of such a *politeuma*, an event which Josephus cited Hecataeus as relating: that Ptolemy I gathered Jews who were prepared to follow him to Egypt and read to them a document: "For he possessed (the conditions) of their settlement and their political constitution (drawn up) in writing" (*AgAp* 1 §189). A variant of the formula 'to live according to their ancestral laws' was also used by the Seleucid King Antiochus III on the occasion of his conquest of Jerusalem in 198 B.C. (*CPJ* 1: 7 and note 19; *Ant* 12 §142). Moreover, in the *Letter of Aristeas* 310 the Jewish community of Alexandria is called *politeuma*.

The largest Jewish community in Egypt was this one in Alexandria. The first authentic evidence of the presence of Jews in Alexandria is given by Aramaic and Greek

inscriptions from the necropolis of Ibrahamiya in the environs of the town, probably of the reign of Ptolemy I or II (*CPJ* 1: 3, n. 8 and *CPJ* 3: 138–39). The Alexandrian literature, especially the translation of the Bible into Greek, testifies to the strength and vitality of the Jewish community of Alexandria already from the 3d century B.C.

The main occupations for the Jews in Egypt were military service and agriculture. Although the Ptolemies identified themselves with Pharaonic and other Egyptian traditions, they were aliens among the native Egyptians. As noted earlier, they depended therefore upon Macedonian and other non-Egyptian military personnel for their power. Accordingly numerous Jews served in the army as soldiers on duty or as soldiers of the reserves. To lessen the cost of maintaining an army, and to make the military forces identify themselves with the government, the Ptolemies adopted the policy of settling large number of soldiers in special military colonies, where in return for a plot of farmland they were obliged to return to active service upon call. This plot of land was liable to be withdrawn and restored to the king's possession, yet, in the process of time, it became gradually a permanent possession and could as such be inherited by the leaseholder's (the *cleruch's*) children. The terms used to designate such a military colony was *katoikiai* or *cleruchies*. (*CPJ* 1: 11–15).

There is no evidence for self-contained Jewish military units in the 3d century B.C. Josephus (JW 2 §487) reports that Alexandrian Jews were permitted to take the title of Macedonians, which probably meant that some Jews served in the Macedonian unit. The possibility should not be excluded, however, that there were separate Jewish units or sub-units at places where the Jews were numerous enough to form fairly large communities, such as in the Fayûm. (Kasher 1985: 40–48). Some Jews served as officers, such as Eleazar, son of Nicolaus, who, according to an inscription at the Fayûm, served as *hegemon*. This term generally designated a high officer next in the rank to the *strategos* (*CPJ* 3: 163; Kasher 1985: 46).

The other main occupation for Jews in the 3d century B.C. was agriculture. Having received allotments from the king, many soldiers were at the same time farmers. Other Jews were lease-holders, "king's peasants," field hands, vine-dressers, shepherds, and so on. Jews also held positions in the police and in the governmental administration. A renegade Jew, Dositheos, son of Drimylos, served as one of the 2 heads of the royal secretariate; later he was called to the highest priestly office in Egypt—that of being priest in the ruler-cult as the eponymous priest of Alexander and the deified Ptolemies. He served during the reigns of Ptolemy III Euergetes I (246–21 B.C.) and Ptolemy IV Philopator (221–204 B.C.), (*CPJ* 1: 230–36; Kasher 1985: 60).

As the Jews penetrated into Ptolemaic Egypt, Hebrew and Aramaic gradually ceased to serve as spoken and literary languages, especially in Alexandria, but also increasingly in other parts of Egypt, as seen from inscriptions and papyri written in Greek. Since the Jewish communities within limits were permitted to follow the ancestral laws, the knowledge of the laws of Moses was a fundamental need for the Jews themselves, and to a varying degree also for their sovereigns and employers, the different levels of the Ptolemaic administration (cf. Kasher 1985: 5; *CPJ* 1: 31; Tcherikover 1966: 348).

The Gk translation of the Hebrew Bible, the Septuagint (the Translation of the Seventy), probably was initiated during the reign of Ptolemy II Philadelphus (284–246 B.C.) and was (with the exception of the book of Daniel) completed towards the mid-2d century B.C. The Greek spoken and written by the Jews reflected their background. The Septuagint (LXX) contains many Hebraisms; and a learned Greek, Cleomedes, gibes at the rude folk dialect used in the synagogues. The translators to some extent modified the Hebrew text, at times drawing on some of the current exegetical traditions (*CPJ* 1: 30–32; Tcherikover 1966: 348; Fraser 1972, 1: 689–90). The legendary story about the translation as recorded in the *Letter of Aristeas* is discussed below.

The LXX served as basis for the Jewish Alexandrian literature. The pieces preserved of this literature from the 3d century are largely found in Eusebius, *Preparatio Evangelica*. Eusebius had 5 fragments of Demetrius, and Clement of Alexandria preserves still another fragment. Demetrius wrote in the 3d century B.C. under Ptolemy IV Philopator (221–204 B.C.), probably in Alexandria. His work was apparently called *On the Kings of Judaea*. The fragments mainly concerned the patriarchal history of the LXX Pentateuch and were probably part of the preface to an account of the Judaean monarchy. He formulates the biblical history in the form of Greek chronological historiography, corresponding to the chronological presentation of Egyptian history by the Egyptian priest Manetho, who also lived in the 3d century B.C. The goal which Demetrius and Manetho had in common was to demonstrate the considerable age of the respective national traditions (Hengel 1974, 1: 69; Fraser 1972, 1: 690–94; Attridge 1984: 246–97; *ANRW* 2/20/1: 248–51). Demetrius is also an exegete. He builds his book on the LXX and raises exegetical problems and gives answers (cf. the exegetical form of *quaestiones et solutiones*).

Eusebius has also preserved parts of the drama *The Exodus* written in Greek iambic trimeter by one Ezekiel, otherwise unknown. The tragedy covered most of the life of Moses in a version which for the most part followed the Septuagint translation quite closely, from Moses' birth to the Exodus with the crossing of the Red Sea, the destruction of the Egyptians, and closing with a description of the oasis Elim. A remarkable departure from the LXX text is found in a dialogue between Moses and his father-in-law, in which Moses describes a dream. In his dream Moses is conveyed to Sinai's peak, where he sees a gigantic throne and upon it, God himself in human semblance. God bids him approach the throne, gives him the sceptre, seats him on the throne, and crowns him. From the throne, Moses beholds the whole universe. According to the interpretation, Moses will cause a great throne to arise, and he himself will rule over mortals. Morever, he will see all things in the present, past, and future.

The fragments place emphasis on the Passover, and they express a cosmic understanding of Jewish existence. Moses' cosmic kingship implies a claim by the Jewish nation to be the ruler of the world. Accordingly, the opposing Egyptians who fought against the Jews, were destroyed. The tragedy shows how an Egyptian Jew employs Greek literary

form to interpret Jewish self-understanding. The tragedy was written during the second half of the 3d century or the first half of the 2d century B.C. (Nickelsburg 1984: 125–30; Fraser 1972, 1: 707–8; Cf. Borgen 1984: 267–68). See EZEKIEL THE TRAGEDIAN.

The Egyptian priest Manetho counselled Ptolemy I Soter on native religion, and in his history of Egypt he also interpreted the Exodus of the Hebrew people. He represented them as mixed up with a crowd of Egyptian lepers and others, who for various maladies were condemned to banishment from Egypt. Manetho's work reflects the hostility of Egyptians to foreigners, and especially to Jews (*AgAp* 1 §229; 2 §1–15; *ANRW* 2/20/2: 41–52; Fraser 1972, 1: 508–9). At the same time his polemic against the Jews testifies to the fact that they represented an important factor in Egyptian society already.

2. From Ptolemy VI to the Roman Conquest (181–30 B.C.). The Jews of Egypt not only consolidated their positions during the period from Ptolemy VI Philometor (181–145 B.C.) to the Roman conquest in 30 B.C., but they became a considerable military and political force. The background was the weakening of the Ptolemaic government since the mismanagement of the Egyptian economy by Ptolemy IV Philopator and Ptolemy V Epiphanes (204–181 B.C.). The Ptolemaic relationships with the native Egyptians deteriorated, fomenting local revolts. Moreover, the foreign policy of the Seleucids in Antioch grew more aggressive, and they consistently were on the military offensive. Family quarrels and court intrigues drained the strength of the Ptolemaic dynasty from the inside. When the Ptolemaic kings called for assistance from Rome, the new power in the West, Egypt became almost a client of Rome. In 198 B.C. Antiochus III (222–187 B.C.) conquered Palestine, and in 170 B.C. Antiochus IV Epiphanes (175–164 B.C.) invaded Egypt, but had to withdraw upon the ultimatum given him by the Roman envoy Popilius Laenas (Tcherikover 1966: 73–89; Rostovtzeff 1941, 2: 705 and 871; Wilson *IDB* 2: 55–56; Fraser 1972, 1: 119–20).

When the relation between Jerusalem and the Seleucid occupants grew tense, pro-Ptolemaic sympathies developed in the city, and shortly before the Maccabean revolt in 167, many Jews emigrated to Egypt. Of special importance is the emigration of Onias of the Jerusalem high priestly family.

According to Josephus (*JW* 1 §33 and 7 §423), the high priest of Jerusalem, Onias III, fled to Egypt during the persecution by Antiochus IV Epiphanes (175–164 B.C.) in 175 B.C. Conversely, Josephus presented another version (*Ant* 13 §62 and 12 §387) in which he connected the emigration to Egypt with the appointment of Alcimus to the high priesthood in Jerusalem, about 162–160 B.C. When Onias IV realized that the Seleucid authorities had managed to abolish his family's claim to the high priesthood, he left for Egypt. In Egypt he found an ally in Ptolemy VI Philometer. V. A. Tcherikover, after having analyzed the passages in detail, reached the conclusion that the account in Josephus' *Antiquities* is the more reliable one (Tcherikover 1966: 228–31; 276–77; Kasher 1985: 7).

Onias IV and his sons Helkias and Hananiah had a remarkable career in Egypt. Onias was priest and warrior and was given an important role to play in Ptolemy VI's counter-move against the threatening power of the Seleucids. Onias and his Jewish followers formed a military force of some size, and they were settled in the Leontopolis district about 190 kilometers SE of Alexandria. The settlement is today identified as Tel el-Yehoudieh, 3 km S of present-day Shibin el Qanatir. Onias built a temple, and the area along the E branches of the Nile Delta was called "the Land of Onias." The settlement and the temple were probably built some years after Onias and his followers had emigrated to Egypt; that is, when Onias had gained a reputation as a good general and had organized around him a Jewish force of military value. V. A. Tcherikover suggests that the date of the founding of the military settlement *(katoikia)* might have been some time before the death of Ptolemy VI Philometor in 145 B.C. (Tcherikover 1966: 277–80; *CPJ* 1: 2 and 19–21). The location of this military center was strategically important, and the fact that the Jews were assigned the defense of such a sensitive area for about 100 years indicates their strong position in Ptolemaic politics (Kasher 1985: 7–8). Their alliance with the Ptolemaic rulers also proved that they favored a centralized government and wanted to mark themselves off from the native Egyptians.

The many intrigues and conflicts within the weakened Ptolemaic dynasty caused problems, however. In the conflict between Ptolemy VI Philometor and his younger brother, Ptolemy VII Euergetes II (Physcon), the power of the population increased, and for a century populace, especially in Alexandria, played a decisive and disastrous part in Egyptian politics. The death of Ptolemy VI Philometor in 145 left Queen Cleopatra II and her son to face Ptolemy VII, who ruled Cyrene. Onias, his friend Dositheus, and the Jewish soldiers were the leading force in support of Cleopatra. The Queen could not withstand Ptolemy VII Euergetes II, however, and she was forced to marry him. He then ruled as king from 145–116 B.C. Ptolemy VII turned against the supporters of the late Philometor. Accordingly, he persecuted the Jews. Josephus tells that when preparing to attack Onias, Ptolemy VII decided to exterminate the Jews of the country and ordered that they should be thrown naked and fettered at the feet of drunken elephants. The elephants, however, left the Jews untouched and attacked the king's men, killing many of them. When the king saw that the Jews were not hurt, he repented of his evil intent. The Jews instituted a festival in memory of this day of salvation (*AgAp* 2 §53–55). The story, although legendary, is probably based on a version of some actual danger (Fraser 1972, 1: 1 and 121; Tcherikover 1966: 282; *CPJ* 1: 21–22).

The relationship between Ptolemy VII and the Jews was normalized, as seen by the fact that synagogues were dedicated to him. Such a move from the king might have been furthered by the native Egyptians' numerous revolts, and an unrest in the Greek population of Alexandria.

When Ptolemy VII died, his niece-wife, Cleopatra III reigned from 116 to 101 B.C. Cleopatra chose her younger son Ptolemy X Alexander I to be co-regent. The Alexandrians compelled her to depose him and allow the older son, Ptolemy IX Lathyrus, to share her throne. In the subsequent tension and conflicts between the Queen, her sons, and the population, the Queen's control of the capital and the country was largely built on the loyal support of the Jews. The sons of Onias IV, Helkias and Hananiah,

were appointed high officers in the Queen's army. Josephus tells that Cleopatra appointed the two Jewish generals "at the head of the whole army." Although probably an exaggeration, the statement testifies to their leading position in the army also beyond the Jewish units (Ant 13 §349). When Ptolemy IX Lathyrus, having fled to Cyprus, conducted a campaign against his mother with Seleucid help, Cleopatra entered into an alliance with the Hasmonean king Alexander Janneus (*CPJ* 1: 23, and *CJP* 3: 141–42; Tcherikover 1966: 283).

The Jewish leaders were not simply military supporters of the Queen, they also influenced her in her political decisions. When Cleopatra went to Palestine in the years 104–102 B.C. against the Seleucids and Ptolemy IX Lathyrus, some of her advisers recommended her to betray her ally, King Janneus, and seize the country for herself. Hananiah said, "I would have you know, that this wrong to the king will turn all the Jews who dwell in your kingdom into your foes" (*Ant* 13 §354). Moreover, this incident shows that Hananiah, although of high priestly family from Jerusalem, recognized the Hasmonean government and did not try to return to Jerusalem and its temple. Hananiah's brother, Helkias, had been killed in one of the battles fought in Palestine (Tcherikover 1966: 283–84; Kasher 1985: 11).

Cleopatra's younger son, Ptolemy X Alexander I had been recalled to Alexandria in 107 B.C. and was her coregent, until he murdered her in 101 B.C. Ptolemy X Alexander I was expelled in 89 B.C. by the Alexandrian populace, the army, and his older brother, Ptolemy IX Lathyrus, known as Soter II, who gained the support of the Alexandrians due to the popularity of his wife, Berenice IV. In 88 B.C. there seems to have been a persecution of the Jews in Alexandria, but further details are not known (Kasher 1985: 12; Fraser 1972, 1: 123–24).

During the half of the century from Ptolemy IX Lathyrus' (Soter II) death in 80 B.C. to the death of Cleopatra VII in 30 B.C., the conflicts between the Alexandrians and the Ptolemies continued almost without interruption. Josephus tells of two incidents in which the Jews were directly involved. The first took place during the turbulent reign of the Roman "puppet," Ptolemy XI Auletes. In 58 B.C. he was forced to leave the city, and in 55 B.C. the Roman proconsul of Syria, Gabinus, whose cavalry was commanded by Marc Antony, marched to Egypt to restore Ptolemy XI Auletes to the throne. The guarding of Pelusium in NE Egypt was in Jewish hands, and through the interference of Rome's friend Antipater, the strong man in Jerusalem, the Jews allowed the Romans to pass through Pelusium without any hindrance and to enter Egypt (Tcherikover 1966: 284; Kasher 1985: 12–13).

In a similar way, the Jewish garrison at Pelusium yielded to pressure from Jerusalem in 48 B.C., when Julius Caesar was at Alexandria in a very unfavorable situation. When King Mithridates of Pergamum went with auxiliary troops to extricate him, he at first met opposition from the Jewish garrison at Pelusium. Antipater showed the Jews a letter from the high priest, Hyrcanus II, and persuaded them to change their allegiance and even to provide Mithridates with supplies needed for the journey (Tcherikover 1966: 284; Smallwood 1976: 37–38).

Although the Egyptian Queen Cleopatra VII had outstanding leadership abilities, the reign of the Ptolemaic dynasty was approaching its end. The Roman Antony and the Egyptian Queen were defeated by Octavian in the battle at Actium in 31 B.C., and Antony and Cleopatra ended their lives subsequently. The Romans annexed Egypt in 30 B.C. and made it into a province. A new era had begun.

In this most-glorious period of the Egyptian Jews insofar as political history is concerned, what is known about their religious and cultural life?

Various synagogues are referred to in inscriptions from this period (*CPJ* 1: 139–40; Schürer *HJP* 3/1: 47–50):

(a.) Two synagogues in Alexandria are referred to: one from Hadra, dated to the 2d century B.C. ("to God, the Highest . . . the sacred precinct and the *proseuche* and its appurtenances"); and one from the Gabbary quarter of SW Alexandria, dated to 37 B.C. ("In honor of the queen and the king, to the great God who listens to prayer, Alypos made the *proseuche* in the 15th year, Mecheir . . .").

(b.) Two inscriptions in Athribis in the S part of the Delta are probably to be dated to the 2d century B.C. ("In honor of King Ptolemy and Queen Cleopatra, Ptolemaios son of Epikydes chief of police and the Jews in Athribis (dedicated) the *proseuche* to the supreme God," and "In honor of King Ptolemy and Queen Cleopatra and their children, Hermeas and his wife Philotera and their children (gave) this place for sitting for the *proseuche*").

(c.) Two inscriptions attest the presence of synagogues in the W Delta, both dated between 143 and 117 B.C. One is in Xenephyris ("In honor of King Ptolemy and Queen Cleopatra his sister and Queen Cleopatra his wife, the Jews of Xenephyris (built) the gateway of the *proseuche* when Theodoros and Achillion were *prostatai*), the other is in Nitriai ("In honor of King Ptolemy and Queen Cleopatra his sister and Queen Cleopatra his wife, the benefactors, the Jews in Nitriai (dedicated) the *proseuche* and its appurtenances").

(d.) As for upper Egypt, a large number of ostraca have been found in the vicinity of Thebes with Hebrew names inscribed on them. Most of these ostraca refer to the reigns of Ptolemy VI Philometor (181–45 B.C.) and Ptolemy Euergetes II (145–16 B.C.) (*CPJ* 1: 194–226).

Thus the Jewish population was spread out over all of Egypt. Usually the synagogues served as the community centers. An exception of special interest is Onias' temple and the Land of Onias. At Leontopolis (Tell el-Yehoudieh) in the nome of Heliopolis, an extensive number of Jewish epitaphs has been found. The remains of Onias' temple are thought to have been identified in the same Tell. Originally it was probably meant to compete with Jerusalem Temple, and to express rejection of its high priest. Later this claim seems to have been modified, so that the Jewish garrison at Pelusium in 48 B.C. complied to the letter from the high priest in Jerusalem, Hyrcanus II, and let the army of Mithridates pass through the town (*JW* 1 §33; 7 §436; Schürer *HJP* 3/1: 145–47; Tcherikover 1966: 275–84; Kasher 1985: 119–35; *CPJ* 3: 145–63). For Egyptian Jews in general, there is no evidence that Onias' temple became a serious alternative to the Temple in Jerusalem (*CPJ* 1: 45).

Josephus tells that Onias asked Ptolemy to build a temple to make it possible for him to worship God after the

manner of his fathers. The temple was built on the pattern of the Temple in Jerusalem. Thus Onias' temple shows that those who belonged to it stressed the continuity with the traditions from Jerusalem (*JW* 1 §33; *Ant* 12 §389, in contradiction with *JW* 7 §425–32; see also Kasher 1985: 132–35; Hayward 1982: 429–43). Josephus likewise conveys their need for legitimation for having a temple in Egypt. They based it on a prediction by the prophet Isaiah, as stated in a letter purported by Josephus to have been written by Onias: "For this is indeed what the prophet Isaiah foretold, 'There shall be an altar in Egypt to the Lord God,' and many other such things did he prophesy concerning this place." The reference is to Isa 19:18–19. Onias was both high priest and warrior, and the Jewish community on the Land of Onias was a military settlement. They had a temple and a fortress, and they received help from God in their military activity (*Ant* 13 §65 and 68).

The main Jewish community in Egypt, the one in Alexandria, continued to express its religious convictions in literary forms. *Aristobulus,* the *Letter of Aristeas,* and the *Sibylline Oracles* 3, belong to this period. Aristobulus came from a high-priestly family and lived at the time of Ptolemy VI Philometor (181–145). His work has the form of an exegetical dialogue, where he answers questions raised by the Ptolemaic king (Borgen 1984: 274–79; 1987a: 8–9). See also ARISTOBULUS.

The author of the *Letter of Aristeas,* addressed to Aristeas' brother Philocrates, presents himself as a Greek courtier of Ptolemy II Philadelphus. He tells about a series of events connected with the Gk translation of the Torah. According to *Let. Aris.* the translation took place during the early part of the reign of Ptolemy II Philadelphus, and was done by 70 Jewish scholars sent from the high priest in Jerusalem upon request from King Ptolemy. The date when the letter was written is uncertain, but it presupposes the existence of the LXX translation. A date in the middle or second half of the 2d century B.C. is probable, and in spite of its own claim to have been written by a non-Jew, a Jew must have been the real author (*ANRW* 2/20/1: 83–85; Fraser 1972, 1: 698–704; Kasher 1985: 208–11). See also ARISTEAS, LETTER OF. The *Sibylline Oracles* also use a pagan figure as medium, the prophetess named Sibyl. *Sib.Or.* 3 in the standard collection is Jewish. Its main corpus has been dated to the time of Ptolemy VI Philometor (181–145 B.C.) (Collins 1984: 365–71).

These books have several features in common. They all express a positive attitude to the Ptolemaic rulers: *Aristob.* has an exegetical dialogue with King Ptolemy. *Aristeas* tells how King Ptolemy II Philadelphus wants copies of Jewish books for his library, and how he entertains the Jewish scholars. In *Sib. Or.* 3 a Ptolemaic king, probably Ptolemy VI Philometor or his anticipated successor, is endorsed as a virtual Messiah (3:162–95, 652–56; Collins 1984: 366–67). See also SIBYLLINE ORACLES.

All 3 books place emphasis on what Jews and gentiles have in common. Both Aristobulus and Aristeas agree that when the Greek poets and philosophers speak of "Zeus," they mean the true God whom the Jews worship. Similarly, in 2 Jewish inscriptions from Ptolemaic times found in Upper Egypt, Pan, as the universal god, seems to be identified with the God of the Jews (Hengel 1974, 1: 264). The Sibyl (3: 97–161) draws on myths and legends which were familiar to the gentiles. At the same time, all 3 books exalt the Jews, their philosophy, and religion and express a feeling of Jewish superiority. Aristobulus states that Jewish philosophy, found in the laws of Moses, has many points of agreement with the Greeks, whose philosophers and legislators learned from Moses. The pagan Aristeas makes King Ptolemy to express admiration of the Jewish Temple, worship, wisdom and laws; the Jewish sages exceed the philosophers in their wisdom. The Sibyl appeals to the Greeks to refrain from idolatry and adultery, and prophesies that people from all countries will send gifts and worship in the Temple in Jerusalem. The Jews carry the moral leadership of the human race.

Let. Aris. and especially the *Sibylline Oracles* level criticism against idolatry. *Let. Aris.* contrasts the one God, the Creator, with the idols and idolatry of the Egyptians. The Sibyl offers very sharp criticism of Romans and Greeks for their idolatry and adultery. Also in the fragments of *Aristob.* there is a similar statement: Orpheus and Aretus, in quotations given, had no holy concepts of God since they used polytheistic names of the One God. Both *Let. Aris.* and *Sib. Or.* 3 present the views of Jewish communities for whom Jerusalem and its Temple were the center. Aristeas describes the Temple and its cult, the city and the country, and tells about the gifts to the Temple from King Ptolemy. *Sib. Or.* 3 shows great interest in the Jerusalem Temple. The Greeks can avoid disaster by sending sacrifices to the Jewish Temple. The people from all countries will come confessing their sins and acknowledge the God who is worshipped in the Jerusalem Temple.

Both *Let. Aris.* and *Sib. Or.* 3 deal with politics. Aristeas pictures the ideal kingship and the ideals of his rule. The Sibyl idealizes Ptolemy VI Philometor, and throughout the book emphasizes warfare. The Jews play a role in some of the military actions, although the hope is expressed of a life of peace around the Temple in Jerusalem.

In different ways the writings take up a position in 2 fronts. On the one hand they go against Jewish isolationists, on the other hand they avoid assimilation and apostasy by stressing allegiance to some distinctive marks of Judaism, such as the Temple of Jerusalem and Jewish standards. Moreover, Aristeas defends Jewish observances, such as the dietary laws; Aristobulus glorifies the Sabbath and discusses the celebration of the Passover.

Another book from this period, *On The Jews* by the historian Artapanus, is more syncretistic (Fraser 1972: 1. 704–6; Attridge 1984: 166–68). Artapanus probably wrote his book in Alexandria in the 2d century B.C. The fragments preserved by Eusebius and Clement tell about Abraham, Joseph, and Moses. His concern is similar to that of Aristobulus, Aristeas, and the Sibyl: He weaves Jewish and non-Jewish elements together, so as to glorify the Jewish people. He reflects an Egyptian environment outside the Hellenistic circles connected with the Ptolemaic administration. Artapanus pictures Moses as the father of Egyptian civilization including the political organization of the country. Moses is even seen as father of Egyptian polytheistic religion, and the Egyptian priests bestow on him semi-divine honors. He is called Hermes (= Thoth) because he has interpreted the sacred letters of the hieroglyphic script. Moses is moreover pictured as a successful warrior against the Ethiopians, in command of a peasant

army. Even in this role he ends up being loved by the Ethiopians so that they submit to circumcision, as also do some of the priests.

Artapanus shows kinship with Ezekiel the Tragedian in giving Moses divine attributes, but he does it in a syncretistic way. In his glorification of Moses and in his version of the salvation of the Jews in the Exodus, Artapanus is in direct opposition to the anti-Jewish account of Moses given by the Egyptian priest Manetho.

Thus, the literature from the period between Ptolemy VI Philometor and the Roman conquest reflects the tension within the Jewish communities with a wide range of attitudes from assimilation to separation. Typical for the literature is the attempt to combine distinctive Jewish observances with a fusion of Jewish and Greek ideas or Jewish and Egyptian ideas. The superiority of the Jewish religion is stressed, and in the end time the Jewish nation will play an exalted role among the nations.

C. The Roman Period

In many respects the transfer into Roman rule meant discontinuity with the Ptolemaic past (*CPJ* 1: 55–65; Tcherikover 1963: 1–8; Kasher 1985: 18–20). The Ptolemaic capital had become a provincial city in the Roman Empire. The Roman prefect in the *praetorium* replaced the Ptolemy and his court in the palace. The Roman legions replaced the multi-ethnic Ptolemaic army. From now on, the resources of Egypt and Alexandria had to serve the needs and aims of the new rulers and their home base, Rome. Nevertheless, the victory of Augustus had brought to an end the Ptolemaic dynasty which had proved itself unable to rule effectively. At first, therefore, the Roman conquest meant fresh life into a decaying administration. The result was economic progress. Apart from the appointment of the prefect, Augustus and his early successors only changed so much as was necessary to control the bureaucracy and make it more efficient.

Philo tells that Augustus confirmed the rights of the Jewish community to live in accordance with their ancestral laws (*Flacc* 50 and *Gaium* 152–58). Nevertheless, they entered into a new situation in important areas. They were eliminated as a military factor along with the Ptolemaic army as a whole, even though their realization of being dependent on the central government had caused them to change their allegiance from the Ptolemaic dynasty to the Romans. Nevertheless, it was the Greeks that the Romans used in their administration and to whom they gave privileges. The problem was how to distinguish Greek from non-Greek among the rather mixed population of Egypt. In 4–5 B.C. it was decided that the criterion was to be gymnasium education.

A few Jews continued the tradition of Dositheus, Onias, Helkias, and Hananiah and had high posts in the government of the country, now in the Roman administration. The most prominent examples were Philo's brother Alexander and his son Tiberius Alexander. Alexander was *alabarch,* which probably meant that he was custom superintendent on the E side of the Nile. He was also steward of the property of Antonia, mother of the emperor Claudius. Tiberius Alexander attained the high offices of procurator of Palestine, prefect of Egypt, highest ranking officer in Titus' army in the Jewish war, and probably prefect of the guard in Rome. Alexander remained faithful to Judaism, and donated the gold plating of the 9 gates of the Temple court in Jerusalem. His son, Tiberius Alexander, left his ancestral religion, as had Dositheus, son of Drimylos, in the 3d century B.C. (*CPJ* 1: 49, n. 4; *CPJ* 2: 188–90; Smallwood 1976: 257–59; Kasher 1985: 347).

On the whole it proved more difficult for Jews to meet the requirements for entering governmental posts, although Philo indicates that it still was possible, since he admonishes Jews who pursue education with no motive higher than from desire of an office under the rulers (Tcherikover 1963: 14–15; Borgen 1981: 122–29; Mendelson 1982: 44–46; Borgen 1984: 254–56; *ANRW* 2/21/1: 115–17).

During the period between 30 B.C. and A.D. 117, three armed uprisings and revolts demonstrate that the situation of the Egyptian Jews was deteriorating and moving towards their extermination: the armed uprising at the death of emperor Gaius Caligula in A.D. 41; the impact of the Jewish war in Palestine on the tensions in Egypt, 66 and 70–73 A.D.; and the suicidal messianic revolution of Jews in Cyrene and Egypt in the years A.D. 115–17.

What were the causes and circumstances for these tragic events to take place? The main reason for the crisis in 38–41 A.D. was the growing conflict between the Jews and the Greeks, and Gaius Caligula's enforcement of the emperor worship (Philo, *Flacc; Gaium;* Bell 1926: 14–30; Smallwood 1976: 237–50; *CPJ* 1, 1957: 65–74; *ANRW* 2/21/1: 429–36). The Greeks wanted a ruling from the prefect Flaccus on the constitutional question of Jewish status in the city, and they succeeded in getting Flaccus to issue an edict making the Jews to be "foreigners and aliens." They were now aliens without the right of domicile, and without the rights to have an administration of their own under the leadership of the council of elders.

Flaccus issued this edict after the anti-Jewish forces exploited the visit of the Jewish King Agrippa by setting up a lunatic named Carabas in royal robes in the gymnasium and saluting him as king in a mocking scene. Then the crowd clamored for the installation of images of the emperor in the synagogues. A cruel pogrom followed. The Jews were driven together into a ghetto, and members of the Jewish council of elders were arrested and tortured so severely that some died. An embassy of 5 persons, headed by Philo, was sent to Rome for the purpose of explaining to Gaius Caligula the traditional rights of the Jewish community. The Greeks sent a counter-embassy, headed by the anti-Jewish writer Apion. Philo's mission was a complete failure.

Suddenly the situation changed. In A.D. 41, Gaius Caligula was assassinated and Claudius succeeded him. The Alexandrian Jews started an armed uprising against the Greeks, and they received help by Jews from Egypt and from Palestine. Roman intervention put an end to the conflict, and Claudius issued an edict giving back to the Jews the rights held before the pogrom started, reinstating the *politeuma* and protecting the synagogues. The struggle before the emperor continued. Finally he settled the questions in a letter (*CPJ* 2: 36–55; Bell 1976: 1–37). He confirmed the rights of the Jews, chastised both ethnic groups for their share in the disturbances in Alexandria, and forbade Jews to participate in the activities in the

gymnasium and to take gymnasium education. Claudius stated explicitly that the Jews lived "in a city not their own."

In A.D. 66 the Alexandrian Greek polis wanted the emperor Nero to cancel the Jews' rights in the city. In the same year Nero decided to recognize the exclusive sovereignty of the Greek polis in Caesarea Maritima over all residents in the city, thereby cancelling the rights of the Jewish community. According to Josephus a number of Jews entered the amphitheatre in Alexandria where the members of the polis were deliberating on the subject of an embassy to be sent to Nero. The Greeks tried to capture the Jews, got hold of three of them, and took them away to be burned alive. This aroused the whole Jewish community who attempted to set fire to the amphitheatre. The Roman Prefect, Philo's nephew Tiberius Alexander, crushed the Jewish revolt. The soldiers killed the Jews, burned and plundered their houses. The Jews tried to oppose the Roman troops with arms, but they were totally routed. According to Josephus 50,000 Jews were killed (*CPJ* 1: 78–79).

The Jewish community structure was not abolished, however. The council of elders as institution remained intact. In A.D. 73 some Jewish guerrilla fighters, the Sicarii, fled from Palestine to Egypt, and instigated the Egyptian Jews to revolt under the slogan "No lord but God." After the Sicarii had killed some of the moderate Jews of rank, the leaders of the council of elders in Alexandria called a general assembly and charged the Sicarii for causing dangerous trouble. The assembly seized 600 Sicarii on the spot. The Sicarii who escaped farther into Egypt were arrested and brought back to Alexandria. All were put to death by the Romans. Moreover, the Romans, fearing that the Jews might again join together in revolutionary actions, demolished Onias' temple. This indicates that this temple was still a center of militant Judaism (*JW* 7 §409–20 and 433–36).

The suicidal revolution in A.D. 115–17 involved the Jews in Alexandria and Egypt, in Cyrene, and on Cyprus (*CPJ* 1: 89–90; Tcherikover 1963: 28–32; Hengel 1983: 655–86; Smallwood 1976: 397). The Jews "as if shaken by a strong rebellious spirit," attacked their Greek and Egyptian neighbors. At first the Jews were victorious, but then began to suffer defeats; when it developed into a war with the Romans they were crushed. All who participated in the war fought to exterminate the enemy.

The Jewish revolt was messianic in character. Its aim was to destroy pagans and their polytheistic temples and to establish Jewish control of the whole area, probably also with the final aim of delivering Judea and Jerusalem from Roman occupation. The aim was the liquidation of the Roman regime and the setting up of a new Jewish commonwealth, whose task was to inaugurate the messianic era. In Cyrene a Jewish messiah appeared, King Loukuas-Andreas (Hengel 1983: 655–86).

The revolution was crushed by the Roman legions. In many places the Jewish population was almost totally annihilated. The great synagogue as well as other synagogues and buildings in Alexandria and in all of Egypt were demolished. Some Jews, mainly in Alexandria it seems, survived, but the strength of Egyptian Jews had been broken forever. In this way the more than 700 years of Jewish settlement and history in Egypt had virtually come to an end, and it took more than a century for Jewish life in Egypt to reawaken.

D. Status of the Jews

After this historical survey some further comments should be made with regard to the status of the Jewish communities.

Philo declares that there were a million Jews resident in Alexandria and the country from the slope into Libya to the boundaries of Ethiopia (*Flacc* 43). They worked in many professions (*CPJ* 1: 48–55). In Alexandria there were many synagogues scattered all over the city. One of the synagogues was larger and more beautiful than the others (*Gaium* 134–35; cf *t. Sukk.* 4:6; *b. Sukk.* 516; *j. Sukk.* 5:55a; Kasher 1985: 349–51). Of the 5 quarters of Alexandria, 2 were called Jewish because most of the Jews inhabited them. In the other sections of the city there were many Jews scattered about (Philo *Flacc* 55). Papyri, ostraca, and inscriptions also testify to the Jewish habitation all over Egypt in the later Ptolemaic and early Roman periods (*CPJ* 3: 197–209).

The organization of the Jewish communities varied in different places. In Alexandria there was a united corporation of the large Jewish community. According to the *Letter of Aristeas,* the Jewish community formed a *politeuma* at whose head stood elders and leaders. From the time of Strabo (about 63 B.C. to some time after A.D. 21) there was an *ethnarch* at the head. Strabo defines his function: He "governs the people and adjudicates suits and supervises contracts and ordinances just as if he were head *(archon)* of a sovereign state" (Stern 1976: 278). According to Philo (*Flacc* 74), a *genarch,* who was presumably identical with the *ethnarch,* died when Magius Maximus was to become prefect of Egypt for the second time in A.D. 11–12. At that time Augustus reintroduced a council of elders, the *gerusia,* who assumed the leadership, although the office of *ethnarch* does not seem to have been abolished. The degree of autonomy of Alexandrian Jewry may have been made possible by the fact that Alexandria from Augustus had no city council (Stern 1976: 280; Kasher 1985: 254–55).

Similar forms of organization probably existed in the places of Egypt where the Jewish communities were of sufficient size. Thus, the Jewish *politarch* at Leontopolis may have been the equivalent of the *ethnarch* in Alexandria (Kasher 1985: 127). Of course, the priestly military leadership of the Land of Onias gave this community a distinction of its own during the time of Onias IV and his sons.

Both in the Ptolemaic period and the Roman period the rights of the Jews of Egypt were generally, as already shown, based on the formula that they were permitted to live and have government according to their ancestral laws and customs. The implications and applications of this formula depended, however, on the interplay among the Jewish communities, the political authorities, and the other groups in the country.

Certain rights were commonly recognized: to worship their God; to own and gather in synagogues as community property; to keep the Sabbath and celebrate the feasts of the New Moon, of Passover/Unleavened Bread, of the Weeks, the Day of atonement, the feast of Tabernacles, etc. (Philo *Spec Leg* II:39–222; cf *Gaium* 116–18). The celebration of the other feasts, such as the celebration of the

Septuagint at Pharos (Philo *Vita Mos* II:41–42) and the celebration of the feast in memory of their deliverance when Ptolemy VII Euergetes II (Physeon) wished to have them killed by elephants (Schürer *HJP*^{2} 3/1: 145).

Tensions existed at some of these points, however. Philo refers to a Roman prefect who attempted to compel Jews to do service to him on the Sabbath and in this way do away with the law of the seventh day and other laws (*Somn* 2 §123–32). On the other hand there were Jews who internalized the meaning of the observances to such a degree that they did not comply to the external customs and regulations (Philo *Migr* 89–93; Borgen 1984: 260–61; 1987b).

One specific point in their laws which the Romans permitted them to follow was the right to pay the tax to be transmitted to the Temple in Jerusalem (*Gaium* 311–17; *Ant* 14 §216 and 16 §160–66; Rajak 1985: 23). Strabo, the Talmud, and a papyrus testify to the existence of Jewish legal institutions in Egypt, based on the office of *ethnarch* and/or the council of elders. According to Strabo, the *ethnarch* presided over the courts and supervised contracts. The supervision of contracts is indirectly confirmed by the papyrus recording the registration of a loan contract between two Jews of Alexandria in 13 B.C. at the Jewish records office (Stern 1976: 280–82; *t. Pe'a* 4:6; *t. Ketub.* 3:1; *CPJ* 2: 8–10). Finally, the *ethnarch* supervised the implementation of the edicts of the Roman authorities (Applebaum 1984: 474).

Against this background it is a problem that according to papyri found at Abusir el-Meleq (approximately 130 km SE of Alexandria) the Jews to a large extent resorted to non-Jewish tribunals both in the Ptolemaic and Roman times. The reason seems to be that the jurisdiction of the Jewish court was not compulsory, at least not in cases of general nature. Moreover, legal documents from Fayûm in the 3d and 2d centuries B.C. show that the Jews freely used the Hellenistic laws of Ptolemaic Egypt. M. Stern supposes that Jewish organization and law were not yet established in those military settlements at that time (*CPJ* 1: 32–36; *CPJ* 2: 1–24; Stern 1976: 280–82).

In some respects the Jews had a more-favorable or at least equal status to that of the "Greek" citizens of Alexandria. The Jews were permitted to have their own council of elders, while the Greek citizens were denied a corresponding council (Lewis 1985: 29). In case of corporal punishment, the Jews were punished with the same kind of flogging as the Greek citizens (Philo *Flacc* 78–80).

In other areas the situation of the Jews was less favorable. Augustus introduced a capitation tax, the *laographia,* payable by the male population of Egypt between the ages of 14 and 60 or 62 (*CPJ* 1: 59–65; Smallwood 1976: 231–34). The Greek citizens of Alexandria were exempted, while the Greek members of the capitals, the *metropoleis,* of the *nomes,* paid a reduced rate. The criterion for this concession was the Greek education, and from A.D. 4/5 the "members of the gymnasium" were recognized as a class. The Jews in Egypt in general were classified as non-Greeks and made liable for the tax. Those who could prove that they met the criterion for Greek citizenship were treated as the Greeks. This increased the tension between the Greeks and the Jews, and was one of the causes of the conflict in Alexandria in A.D. 38.

After the destruction of the Temple of Jerusalem in A.D. 70 and the victory of the Romans in the Jewish War, the Jewish tax, *fiscus Judaicus,* was founded. The Jews had to pay the tax previously paid to the Temple of Jerusalem to the Templa of Jupiter Capitolinus. This tax was an additional burden beyond the other taxes levied on the Jews in Egypt (*CPJ* 1: 80–82). All through the Ptolemaic and Roman periods a delicate balance existed between the Jews' refusal to recognize divine attributes of the political heads of state and their expression of loyal acceptance of their rule. The dedication of the synagogues to the political head of state is documented by archaeological findings for members of the Ptolemaic dynasty, but not for the Roman emperors, as far as Egypt is concerned. Philo, in *Gaium* 133, tells, however, that honorific inscriptions and emblems in honor of the emperors were placed in the synagogues (cf. *Flacc* 48–49; Smallwood 1970: 220–21). Upon the accession of Gaius Caligula, the Jewish community of Alexandria expressed their loyalty by passing a resolution in Gaius' honor. Flaccus did not forward this resolution to Gaius Caligula, however (*Flacc* 97–103). Philo praises Augustus for ordering sacrifices of whole burnt offerings to be carried out daily at his expense in the Temple of Jerusalem as a tribute to the most high God (*Gaium* 157–317). This delicate balance between the political authority of the emperors and the exclusive claim of the monotheistic worship of the Jewish nation was upset when Gaius Caligula demanded that images of the emperor be placed in the synagogues and in the Temple of Jerusalem (*Flacc* 41–50; *Gaium* 134–35, 188, 203, 346).

During the late Ptolemaic and the early Roman periods the literary output of Egyptian Jews reached its height. In addition to the monumental works of Philo, the Wisdom of Solomon, the *Third Book of Maccabees* and *Sibylline Oracles* 5 seem to belong to these 200 years.

The Wisdom of Solomon was probably written sometime between 200 B.C. and A.D. 50, most probably during the 1st century B.C. (Schürer *HJP*^{2} 3/1: 568–79; Nickelsburg 1981: 175–85). The central theme is the view that God's cosmic Wisdom is sought and made known to the King of Israel, Solomon, and is seen to be at work in the history of Israel and its worship of the One God. God's deliverance of the righteous and his warfare against the ungodly is the subject of the first part (Wis 1:1–6:11). This "book of eschatology" is framed by exhortations addressed to rulers, kings, and judges. In the second part, "the book of wisdom" (Wis 6:12–9:18) the king, writing in the first person, directs the attention of his royal colleagues to his own example, as seekers of God's wisdom. In the third part, Wisdom of Solomon 10–19, the blessings of godliness and the curse of ungodliness is seen in the different fates of the Israelites and the Egyptians in the biblical story. A lengthy and sharp attack on idolatry occurs in Wisdom 13–15.

The book Wisdom of Solomon outlines the cosmic significance of Jewish existence, interprets the universal role of Israel, represented here by the king, presumably Solomon; and attacks Egyptian idolatry on the basis of Israel's monotheism. Some Greek philosophical concepts have been "conquered" and made to serve Jewish self-understanding and Jewish imperial ideology.

The *Third Book of Maccabees* is an aetiological romance

probably written at the beginning of the Roman period to explain an already existing festival, and to provide the Jews of Alexandria with ammunition in their struggle against the resident Greeks (Schürer *HJP*² 3/1: 537–42 with criticism of Kasher 1985: 211–32; Nickelsburg 1981: 169–72). The main basis for the book seems to have been an older aetiological legend, recorded by Josephus in *AgAp* 2 §5. As already stated earlier, according to this legend Ptolemy VII Physcon cast the Jews, who supported Cleopatra, before drunken elephants. These turned instead against the king's friends, and the king changed his plans.

In *3 Maccabees* this story seems to have been transferred back to the time of Ptolemy IV Philopator and woven together with the problems the Jews faced when that king wanted the Jews and others to worship Dionysus as condition for giving them full citizenship. The book offers support to the view that the Jews had an intermediate status higher than the native Egyptians, but lower than the full citizens of Alexandria. The king removed the privileges of the Jews and degraded them to the rank of natives. Their previous state was that of an ethnic *politeuma* in exile "worshipping God, and living according to his law they held themselves apart in the matter of food." They had the Jerusalem Temple as their religious center. On the condition that they entered into the royal cult of Dionysus they could obtain full citizenship. The end result was that the king issued a letter of protection for the Jews to all the governors in the provinces and permitted the Jews to put to death apostates among their own people.

Philo's numerous works bring together many of the elements found in earlier literature (Borgen 1984: 233–82; *ANRW* 2/21/1: 98–154):

(1) The positive evaluation of the Ptolemaic rulers, found in the *Letter of Aristeas,* in *Aristobulus,* and the *Sibylline Oracles* 3, is also expressed by Philo in his praise of King Ptolemy II Philadelphus (*Vita Mos* II:28–31) and his positive evaluation of the Ptolemaic kings in *Gaium* 138–39. He extends this positive view to the Roman rulers Augustus and Tiberius (*Gaium* 141–61). This positive attitude is conditioned upon their recognition of the rights of the Jews to live in accordance with the laws of their ancestors and to worship the One God. Accordingly, Gaius Caligula and the prefect Flaccus are under the judgment of God for their removal of the privileges of the Jews and their attempt to force them to worship the emperor (Stemberger 1983: 43–48; Borgen 1987b: 275–76).

(2) Philo continues the approach seen especially in the *Letter of Aristeas,* in *Aristobulus,* and the Wisdom of Solomon to interpret the laws of Moses and Jewish existence in general by means of Greek ideas and religious traditions. According to Philo, the authentic philosophy is formulated by Moses, and Greek philosophy contains elements of this true philosophy and is at some points derived from the teachings of Moses.

(3) The sharp polemic against polytheistic cult expressed in writings such as the *Sibylline Oracles* 3, the Wisdom of Solomon, and *3 Maccabees* is also found in Philo's writings. Philo even advocates death penalty for renegades to be executed on the spot, corresponding to the killing of Jewish apostates according to *3 Macc.* (*Spec Leg* I:54–55 and 315–16; Alon 1977: 112–24).

(4) The universal role of the Jewish people is a central theme in Jewish literature in Egypt. According to Philo, Moses was appointed king of a nation destined to offer prayer forever on behalf of the human race (*Vita Mos* I:149; cf. *Spec Leg* I:97; *Gaium* 3–4). The translation of the laws of Moses into Greek made God's cosmic laws known to the Greek-speaking world. Other peoples have begun to honor these laws, and Philo expresses the wish and hope that the time will come when all nations will cast aside their ancestral customs and honor the laws of Moses alone (*Vita Mos* II:43–44).

The quality of the life of the Jewish nation when they adhere to the cosmic principles given them in the Laws of Moses will bring victory over their enemies, and the Jewish nation will be the head of all nations (*Praem* 79–172). Philo favors the achievement of this aim by peaceful means, but he does not exclude the possibility of military warfare (*Virt* 22–50; *Praem* 93–95). He even draws on the expectation of an eschatological warrior-king, who will be a Jewish world emperor (*Praem* 95 and *Vita Mos* 1 §290, based on LXX Num 24:7). Moreover, the diaspora Jews will return to their home land (*Praem* 164–65). Philo himself oscillates between military and spiritual warfare, but he testifies to the existence of a militant eschatology in the Jewish community, ideas which probably inspired the Jews to take up arms at the death of Gaius Caligula in A.D. 41, and in the revolts of A.D. 66 and A.D. 115–17.

(5) Philo continues the tendency found in the earlier writings to stress the superiority of the Jewish nation. Philo's emphasis of the God-given role of the Jewish nation suggests that he did not only fight for equal rights for the Jews, but claimed that the call of the Jews was to be the head nation with other nations as their vassals (*ANRW* 2/21/1: 109–11).

(6) Philo testifies to the continuation of ideological attacks of the Jews from the non-Jews. His treatises *De confusione linguarum* and *De mutatione nominum* defend the Laws of Moses and Jewish institutions against apostates who are inclined to mock. And in *Apologia pra Iudaeis* he defends the Jews against attacks and criticism akin to the negative interpretation of Moses by the Egyptian historian Manetho and others. Thus, Philo tells that there were people who abused Moses as an impostor and prating mountebank (*Apol. Jud.* 6:2).

In this connection it should be mentioned that Josephus *Against Apion,* the anti-Jewish *Acts of the Alexandrian Martyrs,* and Gnostic writings prove that there was a broad stream of anti-Semitic tradition, attitudes, and literature in Egypt. The Jewish polemic against aspects of pagan culture and against some of the other ethnic groups, such as the Egyptians, was at times as pointed. Thus, the *Sib.Or.* 5, written towards the end of the 1st century A.D., is openly hostile to the gentiles in Egypt and Rome (Schürer *HJP*² 3/1: 595–608; Kasher 1985: 327–45; *ANRW* 2/21/1: 340–41; Collins *ANRW* 2/20/1: 436–38; Tcherikover 1963: 1–32; Hengel 1983: 655–85). An eschatological savior will appear, the adversaries will be destroyed, and a glorious Jerusalem will appear.

The Jewish expansion by ideological and peaceful means was defeated by the persecution of Alexandrian Jews in A.D. 38 and the subsequent edict by Claudius: the Jews were to be content with their established privileges in a city

which was not their own (*CPJ* 1: 69–74; *CPJ* 2: 36–55; Smallwood 1976: 246–50).

Accordingly, the God-given universal calling of the Jewish nation could not be fulfilled by peaceful means. The militaristic eschatology was the alternative, and the fierce revolution in A.D. 115 was a logical result. The establishment of a Jewish empire by military means failed, however, and led instead to disastrous destruction in A.D. 117 rather than to a new age with the Jewish nation as the head.

PEDER BORGEN

JEWS IN NORTH AFRICA

Pre-Hellenistic Hebrew seals found at Zliten (Tripolitania in W Libya) and at Cyrene (E Libya), also an amphora inscribed with Hebrew letters at Busetta (Tripolitania) suggest the presence of Jews in N Africa before the Ptolemaic conquest of Cyrenaica. The Jews of Jerba and Boreion, indeed, claimed settlement from the time of Solomon. Jews, probably military colonists, were introduced into N Africa by Ptolemy Lagos in the late 4th century B.C.E., occupying the royal reserves. One of the new Jewish villages may have been Kafarodis (Heb "new village"). A Jewish paramilitary settlement has been identified at Ein Targhuna. The Jewish element in Cyrene was influenced by the Hasmonean revolt in Judea; the book *2 Maccabees,* of which only an abridgment remains, was the work of the Cyrenean Jason. In the 2d century B.C.E., when N Africa was reunited with Ptolemaic Egypt (145 B.C.E.), a fresh wave of Jews entered the region.

In the early 1st century B.C.E. the 5 cities of Cyrenaica (Cyrene, Barka, Berenice, Teucheira, Ptolemais) became independent, and Roman contractors took over the royal lands as sheep runs. The expansion S under the Ptolemies had caused a decline in agriculture, as the Libyans of the S could no longer move N in the summer with their flocks, whose manure was lost to the agriculture of the fertile mountains. The Roman contractors' flocks further restricted the Libyan cultivators, and the Jewish settlers of the royal lands suffered and were probably evicted.

A considerable part of the Jewish population lived in Cyrene, Berenice (Benghazi), Apollonia, Ptolemais, Barka, and Teucheira. There is evidence of the existence of synagogues at Cyrene, Berenice, and Boreion; the affluent community of Berenice also owned an amphitheatre for assembly, and the community was administered by a board of archons. Apollonia and Ptolemais have yielded Jewish funerary inscriptions. A number of Jewish tombs with Gk inscriptions have been studied at Teucheira, revealing a poor community of low cultural level, which also suffered a high infant mortality rate. A few of the inhabitants possessed Roman citizenship, and some Libyan influence was perceptible. This community may have reached Teucheira from Egypt in the late 2d century B.C.E., when a small group appears to have been educated in the city's gymnasium. The known inscriptions cease in 94 C.E. Some young Jews were admitted to the gymnasia of Cyrene and Ptolemais at the end of the 1st century B.C.E., and one Elazaros son of Jason held an important post in the administration of Cyrene during Nero's reign.

In the late 1st century B.C.E. the Cyreneans endeavored to prevent the Jews from transmitting the half-shekel tax due to the Temple of Jerusalem. The Roman government overruled the city's opposition, and from the proceedings it is evident that the Jews of Cyrene were privileged noncitizens exempt from the tax normally paid by that class. In

the year 73 C.E. an extreme activist, Jonathan, who had fled from Judea, appeared at Cyrene and initiated an anti-Roman movement. The richer Jews warned the governor and the movement was suppressed, but the governor seized the opportunity to execute 3,000 wealthy Jews and to confiscate their property. This act paved the way for revolt; in 115 C.E. there broke out the great Jewish rising which lasted 3 years and raged through Cyrene, Egypt, Cyprus, and Mesopotamia. The destruction in Cyrene has been amply revealed by archaeology, and other places damaged were Balagrae, Teucheira, and probably Berenice. Marmarica also suffered heavily. It would seem that Jews returned to Cyrenaica only at the end of the 2d century.

Jewish communities in the W countries of N Africa do not seem to have been influenced by the revolt. A large number of Jews from Judea are thought to have been resettled in the Syrtis in central Libya (*Iscina Locus Augusti Iudaeorum*—Medinet e-Sultan), others in Carthage. It is unknown when the first Jewish communities reached NW Africa (Tunis, Numidia, Algeria, Morocco). Rabbi Akiba visited the country in the early 2d century; Volubilis has yielded an inscription of Mishnaic date. Judah the Prince (late 2d century C.E.) said that Judaism extended from Tyre to Carthage, where several mishnaic scholars were active. For the Jews of Africa the later 2d century initiated a period of prosperity which lasted until the end of the 3d century. Both proselytes and gentiles practicing Jewish rites began to appear. Something is known of the Jewish cemetery at Gamart near Carthage. Synagogues are known in Tunis at Carthage, Hamam Lif, Utica, Tozar, Henshir Dju'ana, Qirwan, Yehudiyah, Sidi Brahim, and Sousse; in Numidia at Hippo, Simitu, Henshir Fuara, Kesur al Halphun, and Tipasa; in Mauritania at Sitifis, Oziah, Aumale, Cherchel, Volubilis, and Constantine. A synagogue certainly existed at Oea (Tripolitania), and another at Boreion in the same region. The organization of the synagogues probably derived from Roman influence: The posts of archisynagogos, archon, grammateus, and gerusiarch are known among the synagogue officials.

The emperor Constantine's Edict of Toleration in 313 presaged the end of the toleration of Judaism. Christianity had spread throughout N Africa in the course of the 4th century. Largely due to the pressure of the Christian church an increasing number of laws progressively restricted Jewish rights and reduced their communities to an oppressed minority.

A highly controversial question is that of Judaism and its influence on the Berbers, the original natives of N Africa who spoke a Semitic language. The Greeks and others claimed that they were Canaanites who had been expelled from Palestine by Joshua, but this was a politically inspired invention. Ibn Khaldun, writing in the 12th century, was the first to record (with due caution) the possible existence of judaizing Berbers in the Aures mountains (Numidia), in W Tripolitania, and in Mauretania. As Jewish proselytization was impossible under Byzantine and Islamic rule, any such activity would have belonged at the latest to the 3d century C.E.; it has been pointed out that traditions of Judaeo-Berbers are found in areas which had been inhabited by Jews in the Roman period. Further, Libyan proselytes were known to R. Hoshayah, Tertullian, and Saint Augustine. Libyan influences were present at Teucheira; there were Libyan converts in Cyrene, in E Cyrenaica, and even in Jaffa. The Jewish Berber queen Dahya el-Kahina, who gallantly fought the Muslim invaders in the Aures, may therefore be something more than a myth.

SHIMON APPLEBAUM

JUDAISM IN ROME

Paul's epistle to the Romans and the book of Acts inform us about the presence of Jews at Rome in the 1st century. The information they supply is indirect and within a theological context; nevertheless, they are sufficient for us to realize that the Christian community of Rome, both in its historical origin and in its internal structure, was closely bound to the Judaism of the capital of the empire (see *StadtrChr*). Consequently, in order to know about the church of Rome it is absolutely necessary to know about the life of the Jews. The Letter to the Romans clearly presupposes a substantial Jewish component of that Christian community, as can be deduced both from the terminology used ("Jewish" and "Israel" occur 11 times; see especially Rom 2:17, but also 1:16, 2:9, 10, 28, 29; etc.) as well as from the themes treated (e.g., the value of the Mosaic law and the salvation of the people of Israel). The Acts of the Apostles in its concluding chapter mentions two meetings Paul had in Rome with the Jews of the city, first with the "most important ones" (28:17) and then with "many" others (28:23). Even if these meetings did not produce great results, their positioning at the climax of the book emphasizes the importance which Luke attached to them. Also, the writer devotes a much greater attention to the Jews of Rome than that which he gives to the members of the Roman church itself (both groups, however, are described as "brothers"; 28:15, 17). These two sources attest to the period ca. A.D. 50–60. But the history of the Jews at Rome begins much earlier, and it extends beyond into the following centuries.

A. History of Jewish Presence at Rome
B. Internal Organization of the Jewish Community
C. Size of the Jewish Community
D. Location in the City
E. Social Status
F. Typical Religious Beliefs

A. History of Jewish Presence at Rome

A number of sources, some of which have the advantage of being contemporaneous with the information supplied,

provide us with data about the history of Jews in Rome. Valerius Maximus (writing at the time of Tiberius) provides an historical note about the earliest presence of the Jews at Rome. Referring to events of 139 B.C., he notes that in this year the *Praetor Peregrinus* (the municipal authority in charge of foreigners) expelled from Rome the astrologers and the Caldeans; besides that, he "forced the Jews to head back to their homes, who had tried to spoil Roman customs with the religious cult of Jupiter Sabazius" (*Facta ac Dicta Memorabilia* 1.3.3). According to the literary sources, the only historical possiblity for the first arrival of the Jews in Rome coincides with one or more of the three delegations sent from Palestine at the time of the Maccabee brothers ca. mid-2d cent B.C.: Judas (1 Macc 8:17–32), Jonathan (1 Macc 12:1–4), and Simon (1 Macc 14:24). It is unclear just what the "cult of Jupiter Sabazius" was. This could be a corruption for *YHWH ṣĕbā'ôt.*, an allusion to the feast of the sabbath, or a witness to a syncretistic form of Judaism from Asia Minor (which was the native land of god Sabazius).

A more certain date for Jewish arrival in Rome coincides with Pompey's conquest of Palestine and Jerusalem in 63 B.C., a conquest which consisted of forced importation (see Philo *Gaium* 155; Josephus *Ant* 14.71.120; *JW* 1.154.180). We do not know the extent to which commercial motivations may have influenced this policy (in contrast, probably, to the Jewish communities in the port cities of Pozzuoli and Ostia). In any case, already in October of 59 B.C. Marcus Tullius Cicero referred to a crowd *(turba)* of Roman Jews that was present during his speech defending the governor of Asia, who had been accused of extorting from the Jews of that province (*Flacc.* 66). Likewise, in the 1st century B.C. we have statements alluding especially to the Jews' zeal in winning converts (see Hor. *Sat.* 1.4.138–44 [esp. 142–143]; 1.5.97–104; 1.9.60–73; see also Ov. *Ars Am.* 1.76).

The more extensive information we have comes from the 1st century A.D. While Augustus was generous in their regard (see *Gaium* 154–58), the emperor Tiberius (14–37) in the year 19 had a certain number of Jews deported to Sardinia (Josephus *Ant* 18.81–84; Suet. *Tib.* 36; Tac. *Ann.* 11.28; Dio Cassius *Hist.* 57.18). There is also the much-discussed decree of the emperor Claudius (41–54), which can be dated to A.D. 49 or even earlier to 41. According to the famous text of Suetonius, Claudius "expelled from Rome Jews continually causing disturbance, Chrestus being the instigator" (*Claud.* 25); but on the other hand, according to another text "He did not expel them, but ordered them not to hold meetings while still continuing in their traditional way of life" (Dio Cass. *Hist.* 60.6.6). It is possible to harmonize the two accounts by suggesting that Claudius did not drive from Rome *all* the Jews, but only those involved in a riot (and thus the statement of Acts 18:2 would have to be judged exaggerated). Under the emperor Nero (54–68) Jews must have enjoyed complete freedom; indeed, even Nero's second wife, Poppaea Sabina, was at least sympathetic toward Judaism, if not in fact a proselyte (*Ant* 20.195 describes her as "God-fearing"). The situation worsened under Vespasian (69–79) who, after the conquest of Jerusalem in A.D. 70, turned the annual tax for the Temple of Jerusalem, now destroyed, into a tax for the temple of Jupiter Capitolinus: (Josephus *JW* 7.218; Dio Cass. *Hist.* 66.7.2; we also know that Domitian was later extremely rigorous in collecting it [Suet. *Dom.* 12]).

The presence and life of the Roman Jews in the 2d–4th centuries is abundantly and directly documented in the burial inscriptions of the 6 or 7 Jewish catacombs (similar to those of the Christians) thus far uncovered near some of the roads leading out from Rome (1 near the Via Portuensis; 3 next to the Via Appia; 1 along the Via Labicana; 1 double catacomb close to the Via Nomentana); these served as cemeteries for the different Jewish communities of the city. Taken together they have provided us with about 580 inscriptions, of which 75 percent are in Greek, while the remainder are mostly in Latin (only 3 are in Hebrew, 1 is in Aramaic, and 2 are bilingual, of which 1 is Greek-Latin and the other Aramaic-Greek). The oldest of these cemeteries was certainly the so-called Catacombs of Monteverde close to the Via Portuensis (today it no longer exists because of a cave-in during the 1920s). It served the Jews of the Trastevere Quarter, who according to Philo made up the oldest Jewish settlement in Rome.

B. Internal Organization of the Jewish Community

These catacomb inscriptions provide important information about the internal organization of the different groups of Roman Jews. Roman Jews, as opposed to those of Alexandria (see *Ant* 12.108; 14.117; Philo *Flacc.* 74), were not grouped together in a single social entity; they did not form a true and properly called *politeuma.* Rather, they were subdivided into various communities designated by the term *synagogē* (this title never indicates a place of worship, which instead was called *proseucha,* from its use as a place for "prayer" [see *CIL* VI: 9821; *Gaium* 156; Juv. *Satira* 3.296]; besides, archeology has not yet brought to light any remains of such buildings, while the beautiful ruins of the synagogue of nearby Ostia are well known).

At present, 11 Jewish communities have been documented (2 others are under discussion). In all probability 5 of these preceded Paul's arrival in Rome. The oldest could possibly be the one named "of the Hebrews" (set up when it was the only one in existence), followed by the one of the *Vernaculi* (constituted, in contrast to the preceding one, by the Jews already born in Rome). There follow 3 others, distinguished by the name of their respective benefactors, all of the Augustan period: those of the *Augustenses,* of the *Agrippenses,* and of the *Volumnenses.* The remaining 6, certainly of later date, bear the following names: *Campenses, Suburenses, Calcarenses,* "Tripolitani," "of Elaias," and "of Scina."

There is no documentation for a higher administrative body which might have presided over all these groups. Only in the 4th century do we know of the title *archigerousiarchēs* (from the Villa Torlonia catacomb in the Via Nomentana), but it is possible that here we are dealing with an honorific title restricted to only one "synagogue." The internal structure of the different communities consisted of a number of offices attested on burial inscriptions. They can be listed as follows according to the order of their importance:

First were the *gerousiarchēs,* who presided over the council of the elders in charge of the administration of each community and the safeguarding of its religious, judicial,

and financial interests (in fact the members of the council were called "presbyters").

Second were the *archontes,* who made up the executive committee of the individual councils; elected for a year, they could be re-elected and in practice held the effective control of the community (there also existed the position of "archon designate," inasmuch as the title is also assigned to children).

Third was the *grammateus,* who acted not only as a "Doctor of the Law" but also as secretary or chancellor.

Finally, there were also a "general collector" in charge of gathering funds destined for the common coffer; an administrator of the common goods; an attorney (i.e., the legal protector of the community); the *archisynagogus,* who concerned himself with the place of worship and presided over the religious assemblies (the title often appears even among pagan communities of the Greek world); and a minister, similar to a sacristan for the service of the synagogue. Other honorific titles included "father/mother of the synagogue" (reserved for men/women of special merit) and "priest" (indicating only levitical ancestry, since outside Jerusalem there was no priestly ministry either after or before A.D. 70).

Apart from the disputed ordinance of Claudius mentioned above, these communities must have enjoyed guaranteed juridical security. In fact, Julius Caesar's legislation in favor of the Jews is well-known, and it was substantially retained in force all the way to Constantine (the package of laws is found in *Ant* 14.185–246). It comprised 3 principal privileges: full freedom of association and worship, exemption from military service, and the power to constitute separate tribunals. In particular, the Jews of Rome—like all Jews in the Empire—were exempted from all the religious cults of the state, including that of the emperor. Consequently, scholars have noted some problems with Dio Cassius' note that the emperor Domitian in A.D. 95 executed the consul Flavius Clemens and "many others who were deviating toward Jewish customs: of them only some were put to death, others were deprived of their goods" (*Hist.* 67.14). The same historian reports that Domitian's successor, Nerva, forbade accusing anyone "neither of ungodliness nor of Jewish way of life" (*Hist.* 68.1.2). Inasmuch as Judaism was a *religio licita,* it is possible that we have here a veiled allusion to Christianity, even if it had a distinctively Jewish stamp (that is already understood in Eus. *Hist. Eccl.* 3.18.4).

C. Size of the Jewish Community

The number of Jews in Rome must have varied according to the historical periods. Since Cicero's type of literary oration tends to amplify the colorings of his discourse, we should be cautious in interpreting his comments about a Jewish *turba* ("crowd"; see above). The first certain information concerns the year 4 B.C., when up to 8,000 Roman Jews accompanied a delegation from Palestine requesting Augustus to unify Palestine with the province of Syria after the death of Herod the Great (*Ant* 17.300). In addition, we know that in A.D. 19 Tiberius exiled to Sardinia 4,000 Jewish youths old enough to bear arms (Tac. *Ann.* 11.85.4; Suet. *Tib.* 36). If we take into account the relationship between these youths and their respective families, we can legitimately deduce that at the time of St. Paul the Jews at Rome numbered around 20,000 (out of a total population of nearly 1,000,000). The circumstances probably changed as a result of the Jewish war. In fact, according to Josephus, 100,000 Jewish slaves were sold in A.D. 70 at a low price (*JW* 6.420); it is quite reasonable to suppose that a large part of this human merchandise ended up in the capital of the empire (Martialis also refers to Jews who had come to Rome from Jerusalem after its destruction; *Epigr.* 7.55). Both Martialis and Juvenal provide us with interesting details about their impoverished condition between the end of the 1st century and the beginning of the 2d century (see E. below).

D. Location in the City

In contrast to Alexandria, where the Jews occupied 2 out of the 5 quarters of the city (*Flacc.* 55), at Rome they were distributed in various areas. However, in all probability, they were more numerous and resided for longer periods of time in the Trastevere section of the city; indeed, that is the only section Philo recounts for the time of Augustus (*Gaium* 155), which is confirmed by the relative antiquity of the Jewish catacomb of Monteverde (see above). But the Jews were also present in at least 4 other parts of the city. One was the popular and ill-famed quarter of the Subura, from which one of the Roman "synagogues" takes its name (see above). The same must be said for the Campus Martius (the name of another of the "synagogues"; see above), while the location of the *Calcarenses* "synagogue" is uncertain (it comes from *calcaria* = lime-kiln). Perhaps it was located in the neighborhood of the place where Diocletian later built his baths (in front of the modern Stazione Termini). Another area of Jewish settlement was in the vicinity of the *Porta Capena,* opposite the Circus Maximus (see Juvenal's *Satira* 3.11–14); but here settlement seems to have been a matter of almost gypsy-like encampments. We also know that a Jew lived near the *macellum* (= market), probably on the Caelian hill (see Frey *CII,* 210).

E. Social Status

The Jews of Rome must have had a middle-low tenor of life. Certainly no conclusion can be drawn from the presence in Rome of the Herodian family members Agrippa I (friend of Caligula and of Claudius) and of his daughter Berenice (paramour of Titus; Suet. *Tit.* 7; Dio Cass. *Hist.* 66.15.3–4). Already the very beginnings of the Jewish presence at Rome were due to a small nucleus of "prisoners of war later freed by their masters" (*Gaium* 155; see above). Explicit references to Jewish slaves are very rare (a woman by the name of *Acme* was in the service of Livia, the wife of Augustus, *Ant* 17.134, 141; a circumcised slave was in the service of Trimalchio in the *Satyricon* (68.6) of Petronius Arbiter; on the other hand, the obscene verse of Mart. *Epigr.* 7.35.4 has metaphorical meaning). Jewish mercantile activities are not attested, but we are informed about handicraft works (see Acts 18:2) and activities associated with the theater (see Josephus, *Life* 3; Mart. *Epigr.* 7.82; 11.94). We also know about a Jewish dealer in brimstone matches (Mart. *Epigr.* 1.41), about a woman who foretold the future and "for a few coins sells all the dreams you want" (Juvenal, *Satira* 6.543, 546f), and about a young beggar (Mart. *Epigr.* 12.57.13).

The Jewish catacombs provide other pieces of evidence, which generally reveal a prevalent condition of poverty. The family burial rooms are very few, and even fewer are those decorated with paintings. Likewise, the sarcophagi are rare and not very elaborate; many tombs are completely without any epitaph; and even the inscriptions are more often than not rudimentary, containing evident grammatical mistakes. This source mentions a painter (*CII,* 109), a butcher (*CII,* 210), and a teacher (*CII,* 133; see also 201 and 508). It is not clear whether any socially prestigeous persons came from the "synagogues" of Rome; the case of Josephus cannot be cited as evidence for Roman Judaism, since his education and status were achieved prior to his stay in Rome. An exception could be Caecilius of Calacte, literary critic of the Augustan period (and probably a Jew), against whom the anonymous author of *On the Sublime* (see 1.1f; 4.2; 8.4; 32.1, 8) argues. In any case, no comparison is possible between the Jews of Rome and those of Alexandria.

F. Typical Religious Beliefs

Pagan literary sources (including Horatius, Ovid, Seneca, Persius, Martial, Juvenal) attest to two typical Jewish practices which apparently particularly impressed the citizens of Rome: circumcision and observance of the Sabbath (see especially Pers. *Satira* 5.179–88). But there is also reference to abstinence from pork and to fasting in general. Likewise the Romans were surprised by the concept of a divinity not capable of being represented artistically (see Juv., *Satira* 14.97; Petronius, Fr. 37; Lucanus, *Pharsalia* 11.593), which could be viewed as a contempt for the gods (see Tac. *Hist.* 5.13).

On the tombstones of the Jewish catacombs there often appear decorations which represent typical objects of worship: the *menorah* (7-branched candlestick), the *aron* (synagogue shrine for the Torah scrolls), the *shofar* (ram's horn trumpet which sounded the beginning of the New Year), the *etrog* (citrus fruit for the feast of the Tabernacles), and the *lulab* (small branch for the same feast). The catacomb of the Randanini Vineyard (on the Via Appia) also exhibits wall paintings of obvious pagan origin, such as the goddess Fortuna crowning a young naked man (perhaps evidence of syncretism?).

One would expect the inscriptions to emphasize the typical Jewish (i.e., Pharisaical) hope in the resurrection, inasmuch as they deal with death; however, such a hope has very little documentation. The longest and most important text relating to resurrection-belief is that of *Regina,* from the name of the deceased, datable in the 2d century (see *CII,* 476, line 6: *Nam sperare potest ideo quod surgat in aevom promissum,* "One is able to hope, because he/she will rise in the promised age"). This perhaps attests to a syncretistic adaptation to the religious concepts of the pagan surroundings, even if one must consider the stereotyped repetition of the epigraphic formulae (which can also reflect more the thought of the marble worker than of the one commissioning the inscription). For example, quite often there recurs the formula of probable pagan origin: "Take courage, no one is immortal!" (*CII,* 314, 335, 380, 401, 450) and "Friends, I am waiting for you here!" (*CII,* 32). We would say that in addition to containing a good wish for peace, these inscriptions generally limited themselves to underlining the moral qualities of the deceased, such as marital fidelity (*CII,* 457), pious observance of the Law (*CII,* 1 72, 111, 132, 509), and regular attendance at the synagogue (*CII,* 321); once the deceased is designated as a "singer of the psalms" (Fasola 1976: 19–20). About one dead person we read simply: *bene vixit in judaismo* ("he lived well in Judaism" *CII,* 537); perhaps that was the best praise.

ROMANO PENNA

BABYLONIAN JUDAISM

The Babylonian exile may have begun in the days of King Jehoiakim (609–598 B.C.E.) as implied in Dan 1:1; 2 Chr 36:6–7 and by Josephus (*AgAp* 1:19). Evidently this exile was only of limited extent. But in the spring of 598 B.C.E., Nebuchadnezzar exiled Jehoiachin the king of Judah to Babylon, together with a considerable segment of the upper class of Judean society. Among the exiles were government authorities (2 Kgs 24:14–15; Jer 24:1; 29:2), the nobility of Judah and Jerusalem (Jer 27:2), lords of estates, and the "men of might" who were subject to military conscription (2 Kgs 24:15–16). Also exiled were the priests and prophets (Jer 29:1), the craftsmen and smiths (Jer 29:1–2), and many residents of the coastal plain and the S (Negeb) of Palestine (Jer 13:18–19).

The deportation of the government and the religious leadership helped maintain the Judean national and religious distinctiveness in the midst of a pagan population whose external ritual was magnificent and whose monumental temples seemed exotic and impressive. This situation challenged the leaders, who labored to prevent the absorption of the exiles into their alien surroundings. Indeed, the fact that the Babylonian exile has continued to exist down to our generation is proof of its having maintained to a great degree its religious and ethnic distinctiveness.

The Babylonian exile is called *haggôlâ* or *gôlâ* ("the exile" or simply "exile") in the Bible (Ezra 1:1) as well as in the literature of the Mishnaic period, (*m. Šeqal.* 2.4) and the literature of the Talmudic sages (*b. Roš Haš.* 23b). This appelation may derive from the perception of the high qualitative level of the exiles to Babylon, or perhaps is an

allusion to their large population which expanded over the course of time.

A. Economic Status
B. Civil and Legal Standing
C. Leaders and Leadership
D. Intellectual and Religious Life

A. Economic Status

We cannot learn much about the economic status of the exiles from the books of Ezekiel, Jeremiah, Second Isaiah, or Daniel. From Ezekiel (1:1) we learn that the exiles were settled near the river Chebar by their captors. This region is well-watered, and it is very fertile. The prophet Ezekiel himself evidently lived in Tel-abib (Ezek 3:15); his activities extended from 593 to 571 B.C.E.

From the books of Ezra and Nehemiah we learn that some of the exiles became wealthy. They assisted their fellow Jews who went on pilgrimages to Jerusalem and sent with them expensive gifts for the building of the Temple (Ezra 1:4–6; 8:25–32). It is said of the "heads of fathers' houses" who made the pilgrimage to Jerusalem that "They gave after their ability into the treasury of the work three score and one thousand darics of gold, and five thousand pounds of silver, and one hundred priests' tunics" (Ezra 2:69). We also learn of pilgrims to Jerusalem who brought with them servants and assorted pack animals (Ezra 2:65–66; Neh 7:67–68).

More details concerning the economic status of the exiles can be learned from tablets unearthed in Babylonian excavations and published by E. F. Weidner (1939). From them we learn of Jewish craftsmen employed in the large construction projects of Nebuchadnezzar. They were brought to the city of Babylon together with many other craftsmen from Tyre, Byblos, and Aradus. We also learn that Judean exiles of good family, headed by King Jehoiachin, his family, and his nobles, were maintained by special allocations from the royal treasury. This substantiates the biblical account of the release and the provisions for King Jehoiachin (2 Kgs 25:27–30).

We glean additional details from the archives of the house of Murašu which dated back to 455–403 B.C.E. The house of Murašu was located in Nippur, 90 km SW of Babylon. The documents deal with moneylenders, hirers and leasers of lands, tax collectors, and people who served as middlemen between landowners and agricultural workers. From them we learn of Jewish workers whose task it was to irrigate fields, Jewish fishermen, and a Jewish shepherd. Of the more than 150 officials mentioned in these documents, 13 of them were Jews. See also MURASHÛ, ARCHIVE OF.

The caravan trade in Babylon expanded during this period, and the demand for merchandise was increasing. The prices of many consumer goods rose, especially the prices of food commodities. We may assume that the Jewish farmers, along with the others, reaped economic benefits from this development. Josephus (*Ant* 11.3) reports that many of the exiles did not return to Judea after the declaration of Cyrus, because they did not want to abandon their possessions. The exiles evidently felt quite content to remain in the foreign country of Babylon, following the advice of the prophet Jeremiah (29:5–7).

In the Seleucid Period, local agriculture made great strides forward. It became diversified through the introduction of new varieties of crops, which were brought from countries lying to the west. Naturally, agriculture flourished, demand increased, and prices rose. Jewish farmers excelled, and we find interesting evidence of this in documents from the end of the 3d century B.C.E. Antiochus III, the king of Seleucia (223–187 B.C.E.), was in the E part of his kingdom subduing an uprising against his authority. While there he heard about revolts against his rule in Lydia and Phrygia. He wrote the following to Zeuxis, the head of the satrapy of Lydia (according to Polybius 16.1, 8), approximately in the year 201: "I determined to transport 2,000 Jewish families with their effects from Mesopotamia and Babylonia to the fortresses and most important places. For I am convinced that they will be loyal guardians of our interests because of their piety to [their] God, and I know that they have had the testimony of my forefathers to their good faith and eagerness to do as they are asked . . . and since I have promised it, use their own laws. And when you have brought them to the places mentioned, you shall give each of them a place to build a house and cultivate and plant with vines, etc." (*Ant* 12.149–52).

Many researchers have dealt with the disputed authenticity of this letter. However, when it is linked with other evidence, we can see that the letter as a whole is historical, although perhaps not in every detail (Marcus 1957).

The Mishnah tells us about a Jewish farmer from Babylon: "Ben Antinus brought up first fruits from Babylon and they would not accept them . . . lest it should be established as an obligation" (*m. Ḥal* 4.11). The man was "an important man" *(Midr. Tan.)*, the owner of an agricultural estate. To judge by his Hellenistic name (according to some mss his name was Titus), it is possible that he lived and was active in the Seleucid period. This Mishnah continues: "Joseph the priest brought the first fruits of his wine and oil, and they did not accept them from him." Since the 2 occurrences are related in one continuous passage, we may assume that the farmer, as well, came up from Babylon, bringing with him wine from his vineyard and oil from his olive orchard.

We are not well enough informed about the Parthian period to know much about the economic activities of the Jews of Babylon at that time. However, we can accept the assumption that no great occupational changes took place, since in the ancient world it was customary for sons to continue in their fathers' vocation. We learn of the wealth of the Jews of Babylon and of their generosity from a tradition that deals with the bringing of the shekel tax from the lands of the diaspora to the Temple. It tells of the offerings made to the priests by the Jews of Babylon and Media: "This was the richest [fund] of all of them, for in it were golden istras and golden darics" (*t. Šeqal.* 2.4). Josephus tells how the Jews of Babylon gathered and kept in the city of Nisibis the pledged donations and the half-shekels they paid, and that from there they brought them up to Jerusalem, tens of thousands of Jews traveling together, because of the fear of highwaymen (*Ant* 18.312). King Herod (37–4 B.C.E.) was anxious to protect the pilgrims from Babylon. He learned that Zamaris, a military commander, had left Babylon leading 500 soldiers, includ-

ing cavalry and archers, and had arrived in Syria. Herod convinced them to settle in the toparchy of Batanaea, and there he built them a settlement called Bathyra, so that they would maintain the security of the Jews coming up to Jerusalem.

Josephus also tells us of Jewish merchants in royal courts who employed their influence to convert royalty to Judaism in Adiabene, including Izates I (35–60 C.E.), Queen Helena, her brother, and her husband Monobazus I. Also, Josephus writes at great length about a merchant named Ananias who had access to the court of Abennerigus the king of Charax Spasinu (lies between the mouths of the Tigris and the Euphrates). Izates, who was staying at Abennerigus's court in keeping with his father's command, there converted to Judaism under the influence of Ananias and with the mediation of the ladies of the court (*Ant* 20.17–35). Josephus also tells of another Jew, Eleazar, who came from Galilee and urged Izates to be circumcised (*Ant* 20.43).

We do not know where these first merchants came from. In any case, their presence and their religious influence in royal courts is important information, because we cannot assume that they carried on their activities only through contacts with non-Jews, without any personal contact with local Jews.

We also learn of Abba Bar Abba, who lived at the end of the 2d century C.E. and who is referred to in the Talmud and in midrash as Abuha Deshmuel ("The Father of Shmuel," his illustrious son). He dealt in silks and fabrics, often far from his city of Nehardea. He became a wealthy merchant and was also the owner of a large estate (Beer 1982).

From Josephus we also learn about the poorer Jews of Babylon. He tells us about an insurrection led by two brothers, Anilaeus and Assinaeus. Their father died, and their mother turned them over to a weaver so that they would learn his trade (which was not very respectable in middle class circles at that time and place). Other poor young people rallied around them. (For more on this insurrection, see below).

B. Civil and Legal Standing

According to later rabbinic tradition, Nebuchadnezzar treated the prisoner exiles very cruelly (*Midr. Pss.*, Psalm 137). But evidently the reference is to the brutal treatment of the Jewish prisoners from Palestine by the Romans after the destruction of the Second Temple. From the book of Daniel we learn that Nebuchadnezzar issued an order to bring to his court some "of the children of Israel, and of the seed royal, and of the nobles . . . to stand in the king's palace" (Dan 1:3–4). However, Josephus tells us that King Darius gave much exceptional honor to Daniel (*Ant* 10.263–264). According to the LXX, Daniel was appointed to a very high post in the kingdom. As is well known, Cyrus showed tolerance to many religions in his kingdom. He restored ruined temples and ritual sites destroyed by his predecessors, and he actively supported them with money and various ritual necessities (*ANET*, 316–17). This was also true of the destroyed temple in Jerusalem (Ezra 1:5–11). We have no knowledge of the treatment of the Jews in his kingdom by Cambyses (530–522 B.C.E.), who was Cyrus's successor. However, concerning their treatment by Cambyses's successor, Darius I, it is said in the book of Ezra (6:8–12) that he approved the construction of the temple in Jerusalem, despite the opposition of various ethnic groups.

The historical truth of the book of Esther is questionable, but in any case we do not find in it information concerning an anti-Jewish government policy. We learn that Ahasuerus (perhaps Xerxes I, 486–465 B.C.E.), his nobles, and his advisors were frivolous and hedonistic. This is corroborated by other sources. R. G. Kent (1953: 150) reports an inscription bearing the king's declaration that he had destroyed the temples of foreign gods and had forbade their worship. From the book of Esther we learn of competition and jealousy among nobles and officials in the king's court. The book of Daniel (6:4–9) tells how nobles and advisors became jealous of Daniel and tried to destroy his status in the royal court. They also denounced the three young men—Shadrach, Meshach and Abednego—to the king, and they were consequently thrown into the fiery furnace (Dan 3:8–12). In short, these were common intrigues, not an expression of deliberate policy. Thus it is possible to sum up the religious policies of the Achaemenian kings in the words of Ghirshman: ". . . the Achaemenians were particularly well-disposed towards monotheistic peoples, above all the Jews."

In the beginning of the Seleucid period, Alexander the Great promised freedom of religion in Palestine to the high priest in Jerusalem, as well as exemption from payment of taxes every sabbatical year. The high priest requested the king to grant freedom of worship to the Jews of Babylon as well, and the king agreed. He also asked Jewish soldiers to enlist in his army (*Ant* 11.338–39). Many researchers have investigated the authenticity of this meeting between Alexander and the high priest (Marcus 1951). In any case, further on we see that Alexander's relationship with the Jews of Babylon was marked by understanding for their religious precepts.

Seleucus Nicator (312–281/280 B.C.E.) granted the Jews equal civil rights, similar to those granted the Macedonians and the Greeks in the new cities established by him throughout his empire and in Syria, including Antioch the capital (*Ant* 12.119). According to Josephus, this was not temporary policy. He tells us that the attitude of Antiochus II (262–247/6 B.C.E.) to the Jews was tolerant (*Ant* 12.125), as well. Furthermore, Antiochus III (223–187 B.C.E.), whom the Jews of Palestine aided in his war against the Ptolemaians (*Ant* 12.134, 138, 142) granted the Jews the right to maintain the purity and holiness of Jerusalem, and he levied heavy fines on those who did not abide by the law. We cannot assume that the king dealt with Jews according to a double standard, that he was partial to the Jews of Palestine but treated the Jews of Babylonia differently, unless we find that he had some special reason to do so. We know of a case of a double standard of this type in the time of Antiochus IV Epiphanes (175–164 B.C.E.), who employed extremely harsh measures against the Jews of Palestine, out of urgent economic necessity and because of internal struggles in Jerusalem between Hellenists and their antagonists.

As for the military service of the Jews of the Seleucid empire, it should be borne in mind that the rulers had an army of mercenaries from Macedonia and Greece. How-

ever, an urgent need to suppress rebellious ethnic groups brought about the necessity for a vigorous conscription. In the reign of Seleucis I and Antiochus I, the kings drafted young men of the generation born in the Macedonian and Greek settlements established under royal sponsorship. But this did not satisfy their needs, so they were forced to mobilize auxiliary forces from among various peoples in their kingdom, including Jews (Stern 1974: 43 n. 200).

The rise of a new dynasty that had a cultural and religious policy of a different character than that of the Seleucids, was of great importance for the Jews of Babylon. The change began in the middle of the 3d century B.C.E. At that time, a number of states in E Seleucia rebelled, including Bactria, Parthia, Armenia, and others. The leader most dangerous to the future of the Seleucid kingdom was Arsakes, the first king of Parthia. The dynasty destined to conquer Seleucia and to rule over it until 224/226 was named after him. It was then conquered by Ardashir I, the founder of the new Sassanian empire; this occupation of course lasted a long time. Between 160–140 B.C.E. Mithridates I (171–137), the king of Parthia, successfully conquered Elymais, Media, Persis, Characene, Babylonia, and Assyria and became the founder of the kingdom of Parthia, although he still had many battles to fight in Iran.

Many Jews lived in those countries, and we do not know what became of them. In any case, it is worth mentioning the relationship of Antiochus Sidates (138–129 B.C.E.) to the Jews. As he was besieging Jerusalem, John Hyrcanus requested of him a cessation of hostilities for the 7 days of the Feast of Tabernacles. The king agreed, and in addition he sent presents for the sacred worship and the treasury (*Ant* 13.242–44). Nicolas of Damascus says of this king: "After defeating Indates, the Parthian general . . . Antiochus remained there two days at the request of the Jew Hyrcanus because of a festival of his nation on which it was not customary for Jews to march out." And Josephus continues and explains: "Nor does he speak falsely in saying this; for the festival of Pentecost had come around, following the Sabbath, and we are not permitted to march either on the Sabbath or on a festival" (*Ant* 13.251–52).

In summing up this study of the civil and legal standing of the Jews of Babylon in the days of the Seleucids, it can be said that as a rule the relationship of the Seleucid kings to the Jews was tolerant. Further on we deal with the influence of their Hellenistic culture on the Jews in their kingdom. In any case, we are told of priests from Babylon who stayed in the Temple in Jerusalem on the Day of Atonement (*m. Yoma* 6.4) and even took an active part in the worship (*m. Menaḥ* 11.7). As has already been noted, many Jews went up to Jerusalem from Babylon. Out of consideration for them a number of religious laws were established, for example: "They intercalate the year only when . . . and because of the residents of the exilic communities, who have not been able to go forth from their homes" (*t. Sanh.* 2.12), or a different formulation: "They intercalate the year only when . . . and because of the residents of the exilic communities who have left their homes and could not otherwise reach [Jerusalem] in time" (*Sanh.* 11a). The lawmakers were also concerned about the pilgrims' peaceful return to Babylon after the Feast of Tabernacles, so they postponed the prayers for rain until "fifteen days after the Feast, to give time for the last of the Israelites to reach the Euphrates" (*m. Taʿan.* 1.3). It is extremely difficult to determine just when these laws were enacted, whether in Seleucid or in Parthian times, in the days of the descendants of Arsakes.

We also learn of dignitaries from Persia who ate at the table of Alexander Janneus (103–76 B.C.E.). The visitors reminded the king that in their last visit they had met a man who addressed them with "words of wisdom." They were referring to Simon ben Shetach, the king's brother-in-law, who was forced by him to run away to Egypt (*Gen. Rab.* 91:3). And Josephus tells us that Herod appointed Ananel of Babylon to the position of high priest in Jerusalem (*Ant* 15.22, 39). Josephus supplies us with additional instructive information on the Parthians who invaded Syria in 40 B.C.E. and enthroned Antigonus, the last of the Hasmoneans, who was the enemy of Rome and the lackey of Parthia. Antigonus issued an order to cut off an ear of John Hyrcanus, so that as a deformed person he would not be able to officiate as high priest (*Ant* 14.366). The Parthians took Hyrcanus with them as a prisoner to Babylon. He was received there with great honor by the local Jews and by Jews from nearby countries, and the Parthian King Phraates IV (approximately 40–3/2 B.C.E.) freed him from his chains and allowed him to live among his people in Babylon. They saw in him a king and a high priest, and they honored him accordingly (*Ant* 15.12–15).

The Parthian kingdom is not notable for having had a centralized government. It was a quasi-feudal state that suffered from internal disputes between various vassals and rival candidates for the throne, because the throne was not hereditary but elected (i.e., it was elected by or subject to confirmation by a majority of the nobility). So it is not surprising that in the days of King Artabanus III (38–12), when dissension increased in his kingdom, 2 young men from Nehardea, Asinaeus and Anilaeus, rebelled against him. Other young people rallied around them. They acquired arms and built themselves a fortress. They proceeded to intimidate their neighbors, to rob cattle from the herds in their vicinity, and to broaden the scope of their authority over their surroundings. At first the authorities were unable to suppress them, and their rule lasted from 20 to 35 C.E. They lost control due to an internal dispute over the marriage of Anilaeus to a non-Jewish woman (see below). The alien woman put poison in Asinaeus's food because she feared that he would convince his brother to banish her from his house, since their marriage was not in keeping with Jewish law. Anilaeus was left alone at the head of his men. He fought against villages ruled by Mithridates, who was the son-in-law of King Artabanus. Mithridates was defeated, and he became Anilaeus's prisoner, but Analaeus freed him in order to forestall the king's intervention. After some time, Anilaeus was killed, and with his death the rebellion of the 2 brothers came to an end (*Ant* 18.314–70). Josephus describes the aftermath of the rebellion in these words: "The Babylonians were now rid of the pressure imposed by Anilaeus, which had curbed their hatred against the Jews—for in general they always quarreled with them because of the contrariety of their laws, and whichever party happened to feel more self-confident would initiate an attack on the

other. Accordingly, now that Anilaeus and his men were no more, the Babylonians began to attack the Jews" (*Ant* 18.371).

Josephus continues with the tale of the Jews' flight to the city of Seleucia, where they took refuge from their attackers. There were many Macedonian residents in the city, which had a Greek majority, and many Syrians who had citizenship rights. For 5 years, until approximately 40/41, none of these groups harmed the Jewish residents. But the ethnic groups were continuously involved in conflicts, especially the Greeks and the Syrians. In one of the quarrels, the Jews allied themselves with the Syrians against the Greeks. The Greeks were reluctant to give up their dominant position in the city, and little by little they managed to win the Syrians over to their side. As a sign of the bond of fidelity and friendship that now united the former enemies, they fell upon the Jews and slaughtered 50,000 of them or more. Only a small number of Jews managed to escape to Ctesiphon, which was situated near Seleucia. Josephus continues: "All the Jewish people in this region now became terrified of both the Babylonians and the Seleucians since all the Syrians who were citizens of these places fell in line with the Seleucians and made war against the Jews their policy. Most of the Jews flocked to Neardea and Nisibis, where they were safe because these cities were fortified and were furthermore populated by men who were valiant fighters every one" (*Ant* 18.378–79).

At the beginning of the 2d century C.E., Marcus Ulpius Traianus, the emperor of Rome (98–117 C.E.), conquered Ctesiphon, the capital of Parthia, and advanced into Babylon. Behind his back a great part of the population of Mesopotamia, including Jews, rose up against the Roman armies. This uprising and the great Jewish insurrection against the Romans (ca. 114–117), which broke out in Cyrene and spread from there to Egypt, Cyprus and, finally, to Mesopotamia, forced the Romans to retreat (*CAH* 9: 236–52). The Jews' participation in the insurrection is an indication of the Babylonian Jews' hatred toward the Romans, "the destroyers of the Temple," and of their preference for the Parthian authorities, the descendants of "the builders of the Temple" (Cyrus). This empathy for the Parthians was widespread in Palestine, as well. Rabbi Judah the Prince exchanged presents with King Artabanus V of Parthia (*j. Pe'a* 1.1). Some researchers do not identify Artabanus with the king himself (Dinari 1978). Rabbi Judah the Prince, upon learning of this Parthian king's defeat at the hands of Ardashir I (which brought the Parthian regime to an end), said, "The bond has been sundered" (*m. ʿAbod. Zar.* 10b–11a).

C. Leaders and Leadership

In a later chronicle, *Seder ʿOlam Zuta* (composed circa the 8th century), the anonymous author presents a list of exhilarchs. The list is headed by Jehoiachin the king of Judah. A listing of the entire dynasty follows (Neubauer 1895: 74–77). However, it is apparent that the compiler copied the earliest names from the listing in 1 Chr 3:18ff., and that he did not have before him a tradition concerning the later exhilarchs who held the office until the 3d century C.E. The author's tendency is clear; he wanted to show the ancient origins of the institution and the genealogy of the exhilarchs of his time, starting with the house of David. In the Talmud we hear for the first time of the son of the exhilarch Rabbi Nathan who, according to the commentaries of Gaonim (Heads of Academies), went up to Palestine in the third or fourth decade of the 2d century (Beer 1976). Nevertheless, we cannot rule out the possibility that among the heads of Babylonian Jewry were descendants of Jehoiachin. It is unthinkable that the Jews of Babylon, whose numbers increased greatly over the generations and whose places of residence were spread out over a large area, could continue to exist as a socioreligious formation without centralized leadership, which was recognized by the authorities and whose task it was to look after their political and religious needs.

The descendants of Jehoiachin, who were recognized leaders in both Babylon and Palestine, included Zerubbabel the son of Shealtiel, "governor of Judah" (Hag 1:1), and Sheshbazzar, "the prince of Judah" (Ezra 1:8). Some scholars maintain that Sheshbazzar is in fact identical to Zerubbabel. As already noted, we cannot rule out the possibility that there were other leaders in Babylon who were descendants of Jehoiachin, but whose names were not preserved. We cannot compare the fate of the sons of David in Palestine to that of their relatives in Babylon, because in Palestine the sons of David were pushed aside by the high priesthood following the renewal of the divine service in the Temple. Of course, no such situation existed in Babylon. Perhaps those priests who did not go up to Palestine and continued to live in Babylon became nothing more than teachers of the law. Note Ezra's title as it is referred to in the letter of Artaxerxes: "the priest, the scribe of the Law of the God of heaven" (Ezra 7:21) or "a ready scribe in the Law of Moses" (Ezra 7:6) or "the priest, the scribe, even the scribe of the commandments of the Lord, and of his statutes to Israel" (v 11). The aspect of the law is strongly stressed, not the aspect of the priesthood or the ritual.

Other leaders of the Jewish community in Babylon should not be overlooked, including Ezekiel the son of Buzi, Ahab the son of Kolaiah, and Zedekiah the son of Maaseiah (Jer 29:21–23). We have no information concerning the genealogy of Nehemiah the son of Hacaliah (Neh 1:1). Similarly, his duties as the chief cupbearer of King Artaxerxes I (464–424 B.C.E.) and his appellation, "Tirshatha" (Neh 7:65), have not been sufficiently clarified. Mordecai should also be mentioned here. According to the book of Esther, he was of the lineage of Kish (Esth 2:5), and it is not clear if the reference is to Kish, the father of King Saul. The young men Daniel, Hananiah, Mishael, and Azariah filled unclearly defined positions in the court of Nebuchadnezzar. "The elders" should also be included in this list of leaders. Theirs was a very ancient institution in Israel. In Babylon the elders may have carried on most of their activities on a local level (Jer 29:1; Ezek 8:1).

Knowledge concerning Jewish leadership in Babylon during the Seleucid Period is unclear. But since we are dealing with a very traditional society, it cannot be assumed that the leadership underwent revolutionary changes, except that prophecy probably ceased to function in Babylon but continued in its Palestinian counterpart. Since we do not find evidence from that period concerning scholars who taught the law to individuals and the public, we may assume that the priests filled the role of "maintain-

ers of the law." It is instructive to note that similar processes took place in Palestine and Babylon: the circle of students and teachers of the law, outside the priesthood, slowly widened. We hear of men learned in the law in Babylon of the Parthian period, such as Hillel the Elder and Nahum the Mede. Both of them resettled in Palestine. On the other hand, Rabbi Judah the son of Bathyra lived in Nisibis and maintained contact with those in charge of the Temple in Jerusalem (*j. Pesaḥ.* 3b). Acts 2:9 mentions pilgrimages to Jerusalem during this period. However, after the destruction of the Second Temple there was an increase in the number of Jews who left Palestine and went down to Babylon, and their numbers increased after the Bar Kokhba war. The most famous wise man forced to leave Palestine, because he was influenced by heretical ideas, was Hananiah the nephew of Rabbi Joshua. His religious activities in Babylon caused negative reactions in Palestine (Neusner 1969).

D. Intellectual and Religious Life

The biblical text provides little information about either the intellectual or religious life of Babylonian Jewry. In the book of Ezekiel there is no evidence of the exiles observing practical religious precepts. There is some mention of them in the books of Daniel and Esther: piety and devotion, attention to the ritual propriety of food and drink, attention to three prayers a day in the direction of Jerusalem, fasts, and customs related to mourning. Also, in the book of Tobit we find mention of knowledge of the Pentateuch and the words of the prophets, the giving of charity, the observance of the Feast of Weeks, and strict observance of burial according to the law.

We do not have any evidence concerning when and where synagogues were first founded. Were they a creation of the Babylonian exile? Perhaps the exiles brought with them the custom to pray in public. Furthermore, we have no evidence of the existence of schools for children or adults among the Jews of Babylon. We do have knowledge of the existence of such institutions among the general Babylonian population. The Babylonians in high social circles conducted a lively intellectual life (*CHJ* 1: 342–58; Bickerman 1988: 51–65, 91–100). Presumably this atmosphere influenced certain Jewish groups in Babylon. However, the Jews' objective need to maintain their distinctiveness had a decisive influence on them with regard to their study and the observance of their religious duties in their pagan surroundings.

More information can be gleaned from what is *not* mentioned in the Murašu tablets: none of the documents containing Jewish names was signed on the Sabbath or on a Feast Day (Zadok 1976). This is a very significant fact for scholars studying the religious situation of the lower strata of Jewish society at that time because, for the most part, the documents deal with that segment of society. It is more difficult to draw conclusions concerning the relationship of the people mentioned in the texts to the Jewish religion. Many of the names listed were common among various Semitic peoples. Even names of clearly Jewish origin, such as "Shabtai" or "Haggai," are not necessarily names belonging to Jews. These names appear in pagan Phoenician and Palmyran sources. Bickerman (*CHJ* 1: 342–58) pointed out the informative phenomenon of fathers whose names were definitely pagan, but who gave their children theophoric names containing components such as *-yahu* or *-yah*. He explains this phenomenon in the following manner: the parents were given pagan names when the belief in YHWH weakened, before the return to Zion. However, after the return to Zion, the rebuilding of the temple, and the renewal of the divine service, the religious faith in God became stronger, and children were again given names having the divine name as components. Indeed, names such as Benaiah, Benael, Pedaiah, and Menachem refer to the return to Zion, the rebuilding of the Temple, and the renewal of the ritual. Although among those going up with Ezra to Jerusalem we also find—alongside names such as Obadiah, Shechaniah, and Johanan—W Semitic names (e.g., Daniel, Jahaziel, and Michael), as well as Babylonian and Iranian names (e.g., Hattush, Bigvai, and Azgad; Ezra 8:2–19; Neh 7:7–62) and even clearly pagan theophoric names (e.g., Mordecai, Esther, and Zerubbabel), this cannot be viewed as proof of the Jews' assimilation by choice into their surroundings. It is possible that the names of functionaries or officials were changed by their superiors into names common in the general society. The most well-known case of this type is the one involving Daniel, Hananiah, Mishael, and Azariah, whose names were changed by official decree to Belteshazzar, Shadrach, Meshach, and Abed-nego (Dan 1:6–7).

A very important influence of the environment on the Jews of Babylon was their acceptance of the Aramaic language, which was the *lingua franca* in the Persian kingdom from the 5th century B.C.E. onward. At the same time, the Aramaic script replaced the ancient Hebrew script. Another important change was the one that took place in the Hebrew calendar. The months were now referred to by their Babylonian names, even though some of them were named after pagan gods. It seems that these influences in Achaemenian times did not adversely affect the Jews' essential belief in One God, the creator of the world and its administrator, who commanded Israel to observe his precepts, especially to observe the Sabbath. Sabbath observance caused the Jews of Babylon to become a distinct ethnic and religious body. Second Isaiah mentions several times the importance of this religious obligation (Isa 56:2, 4, 6; 58:13).

The Jews of Babylon possessed an alert historical consciousness, which was manifested in many ways. From the sources we learn of prayer in the direction of Jerusalem (Dan 6:11); of the observance of four fasts, accompanied by weeping and mourning, related to the events of the destruction of the Jerusalem Temple (Zech 7:3, 5; 8:19); of fasts accompanied by the spreading of sackcloth and ashes (Isaiah 58:5; Esth 4:13); of confession of sins; and of prayer for redemption. More strictly observant Jews of Babylon put into practice the procedures of mourning, because of the destruction of the Temple and the Exile, and they are known as "mourners of Zion" (Isa 61:3). According to Josephus, some Jews of Babylon did not use the oil of aliens (*Ant* 12.120; *Life* 74).

The words of Hecataeus of Abdera (4th and 3d centuries B.C.E.) may be accepted as a summary of the situation: "neither the slander of their neighbors . . . nor the frequent outrages of Persian kings and satraps can shake their determination; for these laws, naked and defenseless,

they face tortures and death in its most terrible form, rather than repudiate the faith of their forefathers" (*AgAp* 1.191). Josephus then brings a number of examples to verify his statement. According to one of them, Alexander the Great was once in Babylon. There he commanded his soldiers to rebuild the destroyed temple of Bel. The Jews among them refused to take part in the reconstruction of a pagan temple, and they were punished with flogging and heavy fines for refusing an order. However, finally, perhaps after their refusal was explained to the king, he freed them and exempted them from participating in the reconstruction (*AgAp* 1.191). This incident is indicative of Alexander's treatment of the Jews, and it is in keeping with his promise to the high priest, as mentioned earlier. This was probably the attitude of the Seleucid kings toward the Jews, as long as they were not beset with economic difficulties (Rostovtzeff 1964, 1: 507; 2: 695–96, 1282; 3: 1427 n. 234). But when they were in financial straits, especially in order to meet payments to the Romans, they would loot the treasures concealed in various temples, including the one in Jerusalem, and this finally brought about the Maccabean insurrection (2 Macc 3:3–15).

As a rule, the Parthians were indifferent in their relationships to the various religions in their kingdom. However, in connection with the Asinaeus and Anilaeus affair we learn of a case in which Sabbath observance played a role. Josephus tells us that the satrap of Babylon planned to attack the camp of the two brothers on the Sabbath, because he knew that on that day they do not conduct war (*Ant* 18.318–19). This is an indication that non-Jews were aware of the Babylonian Jews' observance of the Sabbath. However, Asinaeus did fight on the Sabbath, despite the protests of his soldiers. Josephus also tells us of another case concerning Mithridates, the son-in-law of King Artabanus, who also wanted to fight the two brothers on the Sabbath (*Ant* 18.354). This is important evidence of the religious level of the Babylonian Jewish public with regard to Sabbath observance. Also instructive is this community's abstention from intermarriage. According to Josephus, Asinaeus married a non-Jewish woman, and in so doing he aroused the anger of his men. They considered this marriage to be a sin that might cause a great calamity to befall them (*Ant* 18.340, 349–52). These two fundamentals—Sabbath observance and abstention from intermarriage by the lower social strata—are in themselves enough to explain the Babylonian Jews' maintenance of their distinctiveness for generations in a pagan environment. But in order to observe these fundamentals to the point of self-sacrifice, in cases such as those indicated by Josephus, they must have had some sort of education for religious duties.

The first learned men, "scholars of the Law," of whom we hear in Babylon and its environs date back to the Parthian Period. We do not know if these scholars studied in Jerusalem or in Babylon. Hillel the Elder studied in Palestine under Shemaiah and Abtalion (*j. Pesaḥ.* 66a), and even though the Palestinians diparaged him ("What can be expected from a Babylonian?" *j. Pesaḥ* 6:1), they nevertheless admitted that he had learned the whole body of Jewish learning in Babylon. They said: "For three reasons did Hillel come up from Babylon," and the Jerusalem Talmud (*Pesaḥ* 6:1) sums up, "He expounded and he consented and he went up and he accepted the law." In other words, the law or laws that he expounded in Babylon were accepted in Jerusalem (Ginzberg 1976: 356 n. 4). We have no knowledge from sources in the Second Temple period of study of the law in Babylon. Rabbi Simon ben Lakish, who lived in the 3d century C.E. and who lived and was active mostly in Tiberias, asserted that three people who came up (to Palestine) brought with them from Babylon "learning and established it in Palestine. They are Ezra, Hillel, and Rabbi Hiyya the Great" (*m. Sukk.* 20.6a). Rabbi Akiba met in Nehardea a scholar named Nehemiah who passed on to him a law in the name of Rabban Gamaliel the Elder (*m. Yebam.* 16.7).

We have more evidence of relations between the Jews of Babylon and the Jews of Palestine in the Parthian Period. Queen Helena went up to Jerusalem in the 1st century C.E. (*Nazir* 3.6) to pray there and to sacrifice thank-offerings (*Ant* 20.49). She donated a golden candelabrum to the Temple and "a golden tablet on which was written the [Num 5:12–28] passage concerning the suspected adulteress" (*Yoma* 3.10). Also "Monobazus the King would make all the handles of the utensils of the Day of Atonement out of gold (*Yoma* 3.10). When Helena came to Jerusalem she found that there was a great famine in the land. She sent emissaries at her expense to Alexandria in Egypt to buy grain, and to Cyprus to buy cakes of dried figs to distribute to the needy. It is also said that upon his hearing of the famine in Jerusalem, Izates the son of Queen Helena sent large sums of money to the heads of the city (*Ant* 20.51–53). It is said of King Monobazus that "he arose and wasted his treasures in two droughts" (*t. Pe'a* 4:18). A relative of the kings of Adiabene, whose name was also Monobazus, fought alongside the Jewish combatants against the Romans in the war of the destruction (*JW* 2.520). But not only Jews and proselytes made pilgrimages to Jerusalem. A non-Jew joined a caravan of pilgrims, and upon his return to Nisibis he told Rabbi Judah ben Bathyra about his trip (*b. Pesaḥ.* 3b).

King Herod's appointment of Ananel from Babylon to the high priesthood in Jerusalem (*Ant* 15.39, 41) throws interesting light on Herod's policies. If this information is true, we have important evidence of relations between priests in Babylon and their colleagues in Palestine, as already pointed out. Indirectly we learn from Josephus of the maintenance of genealogical records of the priests in Babylon. Indeed, in another passage Josephus tells us of the archives in Jerusalem in which the genealogical records of the priests—from Egypt and Babylon as well as those from Palestine—were kept (*AgAp* 1.33). One of the foundations upon which Babylonian Jewry maintained itself as an independent religious formation and as a part of the entire community of Israel was the Hebrew calendar. In order to keep the festivals at a single, fixed time, messengers went from Palestine to Babylon or bonfires were lit on mountaintops so that they could be seen in Babylon, thus informing the Jews of Babylon when the new moon appeared and enabling them to calculate the dates of the festivals (*m. Roš Haš.* 2.4). When it was decided to intercalate a year, the Sanhedrin in Jerusalem notified the Diaspora, including Babylon and Media, to that effect (*t. Sanh.* 2.6, 7). We also know of Rabbi Akiba, who lived in the first half of the 2d century C.E., who proclaimed a leap year in Nehardea (*b. Yebam.* 16.7).

After the destruction of the Second Temple in 70 C.E., and especially after the war of Bar Kokhba (132–35 C.E.), some scholars went down from Palestine to Babylon. The arrival of "Abba the Tall," Rab, in approximately 219, brought about a period of prosperity in the study of the Law in Babylon. Rab in Sura and Shmuel in Nehardea gave public instruction in the Law and trained many pupils. In this period academies were established, and they continued to exert an influence on Jews, not only in Babylon but throughout all the lands of their dispersion, as late as the 12th century.

JUDAISM IN THE MISHNAIC PERIOD

The early 1st through 3d centuries C.E. are commonly referred to as the Mishnaic period, a recognition of the centrality of the corpus of the Mishna (a 3d century Hebrew compilation of traditions, see below) within rabbinic Judaism, the dominant religious system of the Jews from the 3d century up to the modern period. These years are also known as the late Hellenistic, or the Roman, or the Early Christian period, depending on the context of the reference. In this complex and turbulent transitional era new systems replaced the Temple-centered Israelite religious and political structures that had endured during the previous millennium.

A. Continuity with Israelite Religion

In many respects Judaism of this period perpetuates major elements of the myth and ritual of ancient Israel. The idea of the centrality and sacrality of the territory of Israel and of Jerusalem derive from Israelite antecedents. The period witnessed the canonization of biblical literature under rabbinic sponsorship, and with it the acceptance of theological ideas and frameworks of Israelite origin within rabbinic communities. One focus was the emphasis on Torah and scribal ideals. Other influences included the use of the Hebrew language for sacred writing and prayer (though Aramaic was the common language of the market place and Greek was used in official communications) and the continued espousal of many symbols out of Israelite culture. The rabbinic calendar was built directly upon the Israelite model, with a few notable additions and modifications. Dietary regulations in rabbinism drew heavily on antecedents from older Israelite practice and the cult, but the destruction of the Temple in 70 C.E. by Rome necessitated significant modifications.

Obviously, the forced cessation of the cult led to the abandonment of the rituals of sacrifice, though the details of past practices were subjects of much concern in rabbinic literature. The practice of the earlier Israelite system of purity and uncleanness also was suspended with the demise of the Temple, though rabbinic teachers maintained an active interest in debating and delineating the rules for cultic purity. Together, rules for sacrifice and purity occupy about one-third of the Mishnaic corpus. The remainder deals with agricultural, festival, familial, and civil matters.

B. Historical Discontinuities and Developments

Several key historical and social forces shaped Judaism in this period. The destruction of the Temple and the subsequent Roman imperial domination of Israel deprived Jewish leaders of meaningful political power and forced them to turn inward for fresh expressions of Jewish identity. The failure of a messianic rebellion against Rome under the leadership of Simeon bar Kokhba with support from leading rabbis in 132–35 C.E. left little doubt of the futility of hope for the restoration of political independence under the Judaic leadership of that age. In this period the influence of quasi-governmental Jewish authorities, such as the patriarchate, declined and the authority of the rabbinate, internal to the Jewish communities of the

Near East (Israel and Babylonia), increased. The rise and spread of Christianity and other serious competing religious systems in the area in this epoch demanded that Judaic religious leaders articulate new understandings of Israelite destiny.

The irrepressible hope for redemption from political subjugation led to complex speculation on the nature of the promise of messianic redemption, a subject of Israelite contemplation in earlier ages (cf. biblical depictions in Isaiah and Micah). Overall, the rabbinic emphasis on Torah overshadowed and even eclipsed many of the major themes of alternative theological world views inherent in the received Israelite heritage.

C. Religious Systems

The amalgam constituting rabbinic Judaism which took shape in the Mishnaic period drew on the contributions of several immediate Jewish predecessor and contemporaneous groups and ignored or rejected others. The rabbis themselves claimed to be heirs of the Pharisees, a group of politically active Judean pietists of the 1st century. Mainly concerned with the Sabbath, agricultural taboos, and rules of purity, this society established a model of table fellowship and religious literacy emulated within later rabbinic circles. By way of contrast, the authors of the NT Gospels adopted a caricatured and stylized view of the Pharisees and typecast them as the opponents of Jesus.

The integration of an apocalyptic perspective is less apparent within the later rabbinic synthesis of Judean religious attitudes of the 1st century. Recent theories argue that apocalyptic speculation is a mode of expressing alienation from the corridors of political power and social resistance to external control. As rabbinic views evolved they tended tacitly to condone national powerlessness, dismissing it as irrelevant to the present and ultimate reality they envisioned; in the process they thereby devalued apocalyptic expressions, which loomed as threats to the stability of rabbinic society. Likewise they rejected miracle-working charismatic holy men (cf. the story of Honi the Circle Drawer, *m. Taʿan.* 3:8).

Rabbinic synthesizers correspondingly downplayed the major dimensions of other Judaic systems which did not express values and concerns sympathetic to their social condition and philosophical tendencies. The Sadducees, about whom we possess little systematic evidence, appear within rabbinic traditions as adversaries whose theological views were rejected. We also have incomplete data concerning early communities of mystics, though many scholars assume that merkabah (chariot-throne) and other forms of Jewish mysticism have their roots in the Mishnaic period.

The Dead Sea community serves as an informative example of an intermediary system of Judaism of the early part of this era. The residents of the village of Qumran left ample evidence of their apocalyptic-messianic theology and social organization and ritual, locating this community on a historical continuum between Israelite and early Hellenistic forms of religion on the one hand, and early Christian communal patterns on the other. Although small in number and insignificant in cultural influence, the Qumran example illustrates a stage of Judaic development prior to the incipient rabbinic and early Christian alternatives.

Major communities of diaspora Judaism (i.e. outside the Land of Israel) in this age were located in Alexandria, Babylonia, and in Asia Minor. The writings of Philo illustrate the philosophical literacy achieved by the Greek-speaking Jews of Alexandria and, according to some interpretations, they demonstrate the emergence of a cosmic-mystical form of Judaic speculation. The Jewish community of Babylonia shows signs of growth in this time but takes a position of leadership only after the transition to Sassanian rule (226 C.E.) and the decline of the community in Israel in the 3d and 4th centuries. In Asia Minor, archaeological evidence substantiates the existence and influence of Jews within communities like Sardis and indicates the central positions they occupied within the social structures of the towns of the area.

D. Clerical Leadership

In this era, the axis of Judaic leadership shifted from national political figures associated with the Temple in Jerusalem, provincial princes and hereditary priests, to local authority vested in rabbinic scribal holy men in villages and towns. Imperial Roman authorities encouraged similar transfers of prerogative throughout the Near East to better facilitate the ultimate arrogation of dominance and control within the empire. These historical developments are echoed in the internal rabbinic traditions themselves. The narrative account for instance of the founding of the first rabbinic academy at Yavneh by Rabban Yohanan ben Zakkai portrays the master emerging from a besieged Jerusalem, obtaining the sanction of Roman authority, and establishing an authorized center of Torah study at the defenseless coastal town (*ʾAbot R. Nat.* 4).

The rapid rise of rabbinism may be associated in part with the sanctioned ascendence of local holy men, ascetics, miracle workers, dream interpreters, and magicians throughout the area. Consequently, factors including changes in patterns of leadership, the greater literacy of the age attributable to minor technological advances in writing (such as the adoption of the codex for publication and dissemination of knowledge), and the breakdown of priestly custody over the authorized canon all contributed to the successful expansion of the influence of the rabbinic class.

As other forms of local authority lost influence, rabbis increased their political engagement with governmental forces; they became adept at balancing their need to hold sway within their communities and at the same time to refrain from challenging the external forces which governed their land and lives from without. The Judaic system they established, with adaptation and accretion along the way, provided for centuries a viable set of social, political, and philosophical structures for the Jewish community in the subsequent historical settings under Roman, Babylonian, Islamic, and medieval Christian European domination. We know of the life and teachings of hundreds of rabbinic figures. The following mention of the activities of a few illustrates the character of rabbinic leadership in this era.

E. At Yavneh

The period ensuing upon the destruction of the Temple and founding of the Yavnean center was a time of internal conflict, self-definition, and transition. See JAMNIA (JABNEH), COUNCIL OF. Influential leaders of the epoch included Rabbis Yohanan ben Zakkai and his disciples, Joshua, and Eliezer *(m. Abot 2:8)*, and numerous others such as Akiba, Ishmael, Gamaliel, and Eleazar ben Azariah.

Akiba ben Joseph was among the best known sages of this time. His extensive ventures included engagement in rabbinic legislation, biblical exegesis, mystical speculation, and (ill-fated) political activism and martyrdom in support of the Bar Kokhba revolt.

His contemporary, Joshua ben Hananiah was rabbi in Jerusalem and later at Yavneh and Peki'in in Israel (1st and 2d centuries C.E.). As a Levite, it is assumed that he sang in the Temple before it was destroyed. He then took up the trade of needle maker or blacksmith.

With Eliezer ben Hyrcanus, Joshua is said to have carried Yohanan ben Zakkai out of Jerusalem in a coffin during the siege of the city (*b. Giṭ.* 56a). During his later career he was the center of some contention within rabbinic circles. Several sources recount his humiliation by the Patriarch, Gamaliel (*b. Roš Haš.* 25a). Joshua's dispute with Gamaliel over the requirement to recite the evening prayer brought about the events which lead to the deposition of Gamaliel and ascension of Eleazar ben Azariah to the patriarchate (*b. Ber.* 28a). Eleazar exemplified the wealthy adherent of the rabbinic movement, a man of prominent ancestry who sought conciliation between the contending factions of the sages and those who supported the interests of the priestly and patriarchal followers.

Joshua is also associated with a dispute with Eliezer ben Hyrcanus over the ritual cleanness of the tiled ovens of Akhnai. Joshua ruled that these ovens were unclean; Eliezer said they were clean. Eliezer invoked a heavenly voice on his own behalf to prove his position correct. Joshua responded with the famous declaration: "The Law is not in heaven" (a reference to Deut 30:12), i.e., the rabbis alone have the authority to decide matters of the law, not some supernatural voice, or even a direct revelation. Many other legal disputes between Joshua and Eliezer ben Hyrcanus appear in rabbinic sources. According to tradition he engaged in discourses with political figures and various groups: the Roman emperor Hadrian; with the elders of Athens; with the Jews of Alexandria.

F. At Usha

The generation following in the aftermath of the failed revolt (132–135 C.E.) was a time of systematization and standardization within Judaic thought and practice. Judah, Meir, Simeon ben Gamaliel, and Simeon bar Yohai are representative of this generation's central rabbinic authorities.

Judah bar Ilai was a Rabbi of the 2d century C.E. in Usha, in the lower Galilee in Israel. He was a student of Akiba and Tarfon, was ordained by Judah ben Baba, and survived the Hadrianic persecutions. Numerous traditions attributed to Judah and his contemporaries Meir, Simeon, and Yose are preserved in rabbinic literature.

Judah's legal sayings illustrate some of the concerns and activities of the rabbis of his generation. Several of his rulings, for example, deal with the standardization of rabbinic liturgy (*m. Ber.* 4:1) and the regulation of prayer (*m. Ber.* 4:7, *t. Ber.* 1:9, *t. Ber.* 3:5) and daily liturgical blessings (*t. Ber.* 6:18). Other rules ascribed to Judah emphasize the importance of concentration and intention during the performance of rituals (*t. Ber.* 2:2), or with the importance of maintaining the proper frame of mind during recitation of prayers (*m. Ber.* 2:2). Judah also is associated with legislation concerning the recitation of blessings over foods (*m. Ber.* 6:4, *t. Ber.* 4:4–5), with blessings over natural wonders, both those for which one is permitted to recite blessings (*m. Ber.* 9:2) and those for which one is forbidden to recite because it would appear to be a form of idolatry (*t. Ber.* 6:6).

Judah's contemporary, Meir was a descendant of a family of proselytes which traced its line back to the Roman emperor Nero. He was a student of both Akiba and Ishmael and is listed as one of the 7 disciples of Akiba who issued a famous edict concerning the calendar. He also was one of the 5 rabbis ordained by Judah ben Baba during the Hadrianic persecutions. He was married to Beruryah, one of the few learned women mentioned in the Talmud. Meir was thus involved in her tragic life (discussed below) and in the events of the Bar Kokhba war.

Meir was associated with the legendary Elisha ben Abuya, the well-known heretic of his time, known also as Aher (the "other"). Some rabbinic sources depict Meir as Aher's would-be disciple and is also said to have been called after Elisha's death to extinguish the fire of his burning tomb.

Meir is prominently linked to the major rabbinic legislative and political activities of his generation. He is said to have served as *ḥākām*, sage, in the Ushan court. His technical ability to defend both sides of opposing legal viewpoints was greatly extolled. Ultimately, his opposition to the patriarch Simeon ben Gamaliel, is said to have been the basis for his exile from Israel.

Legal rulings ascribed to Meir comprise an important part of the earliest rabbinic compilations, Mishna and Tosefta. His role in these works is so important that the Talmud stipulates that any anonymous ruling in the Mishna is to be attributed to Meir; hence the corpus of his traditions was one of the primary documents used in its redaction.

Meir's dicta deal with most of the central values of rabbinic Judaism in its period of systematization in the latter half of the 2d century. An illustration of a tradition attributed to him indicates his understanding of rabbinic ritual as a coherent system of practice:

> R. Meir used to say, "There is no man in Israel who does not perform one hundred commandments each day [and recite over them one hundred blessings] . . . And there is no man in Israel who is not surrounded by [reminders of the] commandments: [Every person wears] phylacteries on his head, phylacteries on his arm, has a mezuzah on his doorpost and four fringes on his garment around him . . ." [*t. Ber.* 6:24–25].

Simeon ben Gamaliel (II), another Rabbi of this period held the hereditary office of patriarch or president. He

studied Greek and supported a policy of peace with Rome. According to one Talmudic source, two of his rabbinic colleagues, Meir and Nathan, sought to oust Simeon from his position as patriarch during a struggle for power within the ranks of rabbinic leadership. In the Talmudic account of the political tension, the 2 masters became angry when Simeon decreed that the students in the academy should not stand in their honor when they entered the college. They then conspired to test Simeon on an obscure tractate of the law in order to bring him to disgrace. One of Simeon's supporters prepared him in the laws of this tractate and he was able to pass the test. He then banished Meir and Nathan from the academy. Nonetheless they continued to send messages with legal problems to the college. The leaders of the academy then recognized that they should readmit the two, and did so (*b. Hor.* 13b). The account demonstrates how one episode of internal strife was brought to resolution through compromise.

Among the other rules attributed to Simeon was his statement that not all who wish to recite God's name in the prayers may do so (*m. Ber.* 4:8), showing a restrictive view regarding the use of divine names for liturgical purposes. Simeon's legal views were almost always decisive. The Talmud declares that the law follows in accordance with Simeon Ben Gamaliel in all instances except for three (*b. Ketub.* 77a).

Another prototype of rabbinic leadership was Simeon bar Yohai, a 2d century C.E. rabbinic leader, mystic, and ascetic of the generation of rabbinic activity at Usha in the Galilee. Simeon was one of the two most prominent students of Akiba (with Meir), another of the five rabbis ordained during the Hadrianic persecutions following the Bar Kokhba revolt. According to the version of the incident in the Babylonian Talmud (*Ber.* 28a), he was the student who provoked the deposition of Gamaliel from the position of patriarch of Israel by bringing up in the academy the issue of whether the recitation of the evening prayer was obligatory or optional.

Simeon is the subject of many rabbinic legends. Best known is the story of his hiding in a cave with his son after having been sentenced to death by the Romans. According to some versions of the story when he emerged from the cave after 12 years and saw that people were not engaged solely in the study of Torah, his mystical gaze set the world afire with only a glance (*b. Šabb.* 33b), and a heavenly voice reprimanded him and sent him back to the cave for another year.

Simeon's rulings cover most of the major topics taken up in rabbinic sources. On the importance of the study of the Torah for instance, he says, "If I had been at Mt. Sinai at the time the Torah was given to Israel, I would have asked God to endow man with two mouths, one to talk of the Torah and one to attend to his other needs." On further reflection, he retracted this saying, "But the world can barely withstand the slander of [persons with] one [mouth]. It would be all the worse if [each individual] had two [mouths] (*j. Ber.* 3b)."

The Talmud uses Simeon as the paradigm of a scholar totally immersed in the study of the Torah. Accordingly a rabbi of his caliber would not be required to interrupt his study even for the important and timely daily recitation of the *šĕmaʿ* (Deut 6:4) (*j. Ber.* i.3b).

Medieval Jewish mystics identified him as the (pseudonymous) author of the Zohar, one of the most important rabbinic mystical compilations. He was also associated with the day of *lag bĕʿomer*, the 18th of Iyar, a mystical festival celebrated to this day at the traditional place of his burial in Meron in the Galilee in Israel.

One of the more famous messianic sayings attributed to him declares that if the Jews properly observed 2 consecutive Sabbaths, they would be redeemed (*b. Šabb.* 118b). He is assigned authorship of the Midrashic compilations of Sifre Numbers and Deuteronomy (*b. San.* 86a) and of the Mekhilta of R. Simeon Bar Yohai to the book of Exodus. Several short apocalyptic mystical compilations are also linked with his name.

G. The Role of Women

Beruryah (2d century C.E.) was one of the few famous women in rabbinic Judaism of late antiquity, a rare woman scholar in that male-dominated culture. She was the daughter of Hananyah ben Teradyon and was wife of Meir. Rabbinic traditions portrayed Beruryah as a sensitive yet assertive figure. The Talmud recounted anecdotes illustrating Beruryah's piety, compassion, and wit. In one source she admonished her husband Meir not to be angry at his enemies and not to pray for their death. She suggested that instead he pray that their sins cease and that they repent (*b. Ber.* 10a).

When two of her sons died one Sabbath day, a story in the Midrash reported that she delayed telling her husband until Saturday night when he had finished observing the Sabbath in peace (Midrash to Proverbs 31:10). The Talmud also narrated anecdotes of Beruryah's sharp wit. When Yose the Galilean asked her for directions on the road, she derided him for speaking too much with a woman (*b. ʿErub.* 53b).

The folklore surrounding Beruryah was extensive and poignant. Accounts which weave together the rabbinic sources retold the tragic events of Beruryah's life and the life of her family. According to tradition, not only did two of her sons die suddenly on a Sabbath day, but her father was martyred in the Bar Kokhba rebellion, her sister was taken captive to Rome, and her brother became a brigand (possibly an anti-Roman terrorist) and was murdered. The drama of her life climaxed in the so-called Beruryah incident. She was said in an 11th century tradition preserved by Rashi (commentary to *b. ʿAbod. Zar.* 18b) to have mocked a misogynistic rabbinic tradition which labelled women as flighty. Meir was said to have sent a student to tempt her to discredit her criticism. Tragically, she was thought to have committed suicide after submitting to the advances of her husband's disciple.

Beruryah's public involvement in rabbinic affairs and instruction was clearly an exception to the prevailing propensities and expectations of that society. Contemporary study reveals the ambivalence toward women within this era of rabbinism. Mishna's framers regarded women alternatively in some circumstances as possessors of legal rights and duties, in others as chattels subservient to men. Mainly in matters pertaining to sexual and reproductive function, Mishna treated wives, levirate widows, and minors as property. Divorcees and widows in Mishnaic law controlled their own sexuality and property. However, critical analysis

of the evidence confirms that women were deemed nonentities in almost all public social circumstances, and were denied access to most forms of intellectual and political pursuits and achievements.

H. Textual Production and Advances

The Mishna, published after the turn of the 3d century, stood as the single most authoritative compilation of the early rabbinic estate. It was a composite of the religious statements of rabbis from prior to the destruction of the Temple to the time of its publication. Mishna appears to be a legal code. More precisely it is a study book of legal statements, disputes, lists, and anecdotes detailing the views of hundreds of named rabbinic authorities and containing accompanying anonymous statements—assumed by some to stem from Hellenistic or ancient Israelite times—on various practical and theoretical subjects of concern to the early rabbis. It is a unique compilation in style and content whose influence extends far beyond its time and place.

Recent critical analysis has delineated the specifics of Mishnaic literary form and diction, the contributions of rabbinic masters of each of 4 generations, and the theological assumptions and creative contributions of each tractate as coherent expressions of rabbinic worldviews. A rabbi of the Mishnaic period is called a *tannā'* (pl. *tannā'îm,* teacher), to distinguish him from a rabbi of the later Talmudic era, designated an *'ămôrā'* (pl. *'amôrā'îm*).

The Tosefta is a companion document and a systematic appendix to Mishna. Though the date of its publication is not certain, analysis has shown it to be a composite, in part Mishna commentary, in part supplementary to Mishna, and in part a repository of independent rabbinic teachings.

The collections of rabbinic scriptural interpretations, the books of midrash, frequently cite the authorities of the Mishnaic age, thus ostensibly serving as a major source of data for the period. Current advances in the study of major works of rabbinic midrash have better described the composite nature of that literature and confirmed the post-Mishnaic date of some of those collections. Contemporary research on Sifra (a midrash on the book of Leviticus), Sifre to Numbers and to Deuteronomy, Mekhilta to Exodus, Genesis Rabbah, and Leviticus Rabbah has shown that early midrash compilations rest on distinctive conceptual foundations meant to articulate coherent theological postures and to justify social and political contexts to communities of Jews of late antiquity of the time of their redaction.

The post-Mishnaic rabbinic collective literature in the Babylonian Talmud and the Talmud of the land of Israel are both dependent for their organizational structure, content and authority, on the development, publication and dominance of Mishna in the prior age. The Talmuds contain a fair amount of baraita traditions, traditions thought to be from Mishnaic times, often concerning or attributed to the rabbis of the Mishnaic period.

Recent scholarship has tended to critically limit the value of discrete traditions within Mishna and other early rabbinic texts as sources of evidence for the historical reconstruction of the period, emphasizing the distorting influence of the *tendenz* of the documents' editors and their complex redactional histories. Apart from highlighting these problems and pitfalls for using the early texts, great advances have been made in the past two decades in understanding the underlying rabbinic religious system the documents as a whole express. The previously prevailing view that treated the evidence of rabbinic literature as disconnected and anecdotal has been superseded by recent more critically integrative and analytically sophisticated assessment of the evidence within its cultural context, illustrated best by the work of Jacob Neusner and his students.

I. Revision of Theology

The most consequential advance for the history of Judaism during this era within rabbinism is the establishment of a Torah-dominated theology. Rabbinic claims to authority rested on their asserted association with the revelation at Mt. Sinai through the concept of the dual Torah. This ideology postulated that Moses received as divine revelation both the written Torah (i.e. the Pentateuch) and a concomitant oral Torah. The latter was memorized and passed from teacher to student for generations and constitutes the substance of the rabbinic teachings finally set down in writing in Mishna. The rabbis did not specify all those elements of their teachings which go back to Sinai, nor did they claim to present the divinely revealed *ipsissima verba* of such traditions. The sages of the early age also did not adequately account for the nature of Mishna, replete with its disputed rules and statements and direct attributions to late antique authorities, in light of their implicit claim that it represented the revealed instruction of a millennium earlier.

The theological underpinnings of the rabbinic system relied more for their potency on the authority of the personality of the rabbi who represented an embodiment of the Torah, and accordingly of divine revelation, than on a tight, internal and deductive, philosophical logic.

The basic theological postulates and practices of the rabbinic system sustained the centrality of the concept and symbol of Torah. The rabbis asserted that the study of Torah was the central ritual act of Judaism, equivalent to all other obligatory actions combined. Accompanying doctrine urging restraint against the abuses of power was present within the system's assertions, for instance, that Torah had to be studied for its own sake, not as a tool for political or economic gain.

The rabbis began in this era to transform or "rabbinize" Israelite heritage based on their values and priorities. They reexamined Israelite myth, affixing a rabbinic veneer to its narrative. In their complex recasting of traditions, the sages imputed rabbinic traits to the heroes of ancient Israel, from the patriarchs to Moses (called *rabbēnu,* "our rabbi"), David, and other major figures; like the later masters, they studied Torah and kept the commandments. Rabbinic literary expressions depicted God himself as supreme rabbi with personality traits closely akin to the sages.

The rabbinic Judaism of this period enunciated a stable religious system, defiant of the vicissitudes of historical change. Within rabbinic Torah-centered theology, apocalyptic attitudes played a peripheral role. Depiction of and retreat from evil as a main form of expressing a social

basis of intensified passive-aggressive, retreat-engagement with political challenge was basically uncharacteristic of the mainstream of rabbinic conceptualization. Instead rabbis institutionalized a view of messianism promising salvation without emphasizing immediate deliverance. Rabbinic limitations on and utilizations of the messianic idea vary in later ages usually intensifying subsequent to periods of persecution.

J. Revision of Ritual

Within Judaism of the Mishnaic period, the process of the "rabbinization" of Israelite festivals engendered revision of numerous rituals and restatement of the mythic basis for cyclical celebrations. Passover was formerly a springtime festival of rebirth with connections to the biblical accounts of the exodus from Egypt and was centered on the ritual offering and consumption of the paschal lamb. The rabbis established the *sēder,* a structured fellowship meal, as the primary festive ritual and mandated the recitation of a *hāggādâ,* rabbinic expositions of scriptural passages combined with liturgical recitations and songs and the manipulation of special foods and objects. This mode of celebration downplayed references to the preceding cultic forms of celebration, and focused instead on the Israelite narrative roots as subjects for rabbinic exposition.

The feast of *Šabûʿôt* (Pentecost) also took on new meaning as a celebration of the revelation of the Torah on Mt. Sinai, in contrast to its prior central purpose as a feast of the first fruits brought to the temple in Jerusalem. In later times the revision of the pilgrimage festivals led to such additional changes as the establishment of *Śīmḥat tôrâ* (the festival of rejoicing for the Torah) on the last day of *sûkkôt* (Tabernacles).

Rabbinic scribal values made study of the Torah the central ritual, as noted. In the synagogue the scroll itself was utilized as a symbol and object in worship. It was housed in a prominent niche in synagogues and used for the periodic readings throughout the year. In this era the Jews employed a cycle for reading the Torah on sabbaths in public on a triennial basis, as well as readings on Mondays and Thursdays, fast days, and new moons; there was a special sequence of readings for the festivals.

Earliest inscriptions in synagogues, such as the Theodotus inscription (1st century C.E.), refer to the "purposes of reciting the law and studying the commandments." However, the equivocal implications of limited material evidence of synagogues from the first 2 centuries C.E. make it difficult to ascertain whether the rabbis as a group had significant influence in the institutions or even to what degree synagogues predominated as central religious structures. Evidence from subsequent periods in Israel and the Diaspora (4th to 6th centuries C.E.) suggests that later rabbis did not play a dominant role in the construction or administration of these assembly halls.

Whatever their role in public synagogues may have been, rabbis did undertake to institutionalize the rituals of prayer during the Mishnaic era. The two major liturgies were the *šĕmaʿ*, a litany of earlier scribal origins, and the Prayer of Eighteen Blessings (the *ʿamîdâ*), a priestly and patriarchal liturgy, incorporated into rabbinic ritual at Yavneh.

The *šĕmaʿ* consisted of biblical verses which emphasized the theological themes such as the unity of God, the need to love God, to keep the commandments, and references to reward and punishment, alongside of supporting rabbinic liturgy, which made reference to the classical mythic themes of creation and redemption and emphasized the virtues of Torah study.

By contrast, the Prayer of Eighteen Blessings made overt entreaty for the messianic redemption, the restoration of Davidic kingship, and condemnation of the heretics; for independent legal authority; and for the rebuilding of the Temple; it included the priestly benediction.

The ultimate regularization of these liturgies and their forms and the integration of the components of prayer into composite services resulted from historical and social processes of conflict between factions supporting patriarchal and priestly authority within the community and groups representing the ascent of rabbinic influence.

One perspective on the stages of conflict and compromise, resulting in the conflation of interests and texts is compressed and dramatically recounted in the narrative of the deposition of Gamaliel II (*b. Ber.* 27b–28a, *j. Ber.* 4:1) mentioned above. In that account the rabbis unseated the patriarch after a dispute over a liturgical issue: the obligation to recite the prayer in the evening. Major shifts in the control of the academy ensued and the patriarch ultimately was forced to accept a diminished role in the governance of the community.

K. Establishment of Rabbinic Culture and Continuity with Subsequent Forms of Judaism

By the close of the Mishnaic period rabbinic myth, ritual, and social patterns pervaded the Jewish populations of Israel and Babylonia and constituted a dominant cultural force. Subsequently, Jewish intellectuals developed a philosophical rabbinism in the Middle Ages under the influence of classical traditions, originally preserved within Islamic culture.

Other Jewish thinkers developed mystical forms of rabbinic expression which became widespread within the popular culture of the Jews. Although competing forms of non-rabbinic Judaism arose regularly (such as Karaism in the early Middle Ages), the Judaic system which took initial shape in the Mishnaic era dominated until the modern age. Modern Orthodox Judaism perpetuates forms of Torah-centered rabbinism. Even those new Judaic systems which developed after the enlightenment and reformation of Judaism in early 19th century Europe, maintained some continuities with the rabbinic heritage. Reform Judaism rejected rabbinism, but developed its own form of rabbinate. And modern Zionism, as complex as it was, drew heavily on previous Judaic symbolic expression. The flag of the state of Israel, for example, according to a principal interpretation, recalls in its design the stripes of the sages' prayer shawl, of antecedent ages going back through the Mishnaic period; the chief rabbinate of the state of Israel derives its authority from the Judaic world views of the dual Torah which took shape in the formative Mishnaic era.

TZVEE ZAHAVY

JUDAIZING. In the ancient sources, the noun "Judaizer" and the verb "to Judaize" refer primarily to the actions of gentiles. While the verb can be used to designate the forced conversion of gentiles to Judaism, it normally refers to the taking over of Jewish customs by gentiles without conversion. Gaston argues that those who encourage others "to Judaize" may be either Jews, Christian Jews, or Gentiles and for the sake of terminological precision should never be referred to specifically as "Judaizers" (1986: 35–36).

The Greek verb "to Judaize" is found only in the NT in Gal 2:14. In this text, Paul confronts Cephas: "If you, though a Jew, live as a Gentile and not as a Jew, how can you compel the Gentiles to live as Jews?" The clear implication is that gentiles are being compelled to live according to Jewish customs. Moreover, Paul argues in Galatians that for gentiles to be required to assume the obligations of the Mosaic law threatens the integrity of the gospel. At issue for Paul is the manner in which gentiles lay claim to righteousness. The controversy in Galatians is not with Judaism as such but with those who argue that the gentiles must be circumcised and assume the obligations of the Mosaic law (Sandmel 1979: 112; see also Betz *Galatians* Hermeneia).

Outside of the NT, Esther 8:17 (LXX) recounts that many gentiles declared themselves to be Jews because they feared the Jews. Plutarch (*Cic.* 7:6) also states that a freed slave named Caecilius was said to be given to Jewish practices. Josephus tells of a certain Metilus who spared his life by promising to become a Jew, even to the point of circumcision (*JW* 2.17.10). He also writes of a time in Syria when the Syrians thought "they had rid themselves of the Jews, still each city had its Judaizers, who aroused suspicion" (*JW* 2.18.2). Ignatius denounces those who are Christians and yet live according to Judaism (*Magn.* 8:1). In their case, they have not received grace. Moreover, according to Ignatius, it is "monstrous" to speak of Christ and to practice Judaism (*Magn.* 10:3). What Ignatius means by the term "Judaism" is a matter of debate (Gaston 1986: 36–38), but that there is some connection between the condemned practice and Judaism is evident. In the *Acts of Pilate* 2:1, we read that Pilate's wife feared God and favored the customs of the Jews. Finally, in Canon 29 of the Council of Laodicea, those who "Judaize" are strongly condemned (Mansi 1759: cols. 563–604, Canon 29).

These sources indicate that either because of fear or genuine attraction there were those who embraced Jewish practices. This also suggestes that Judaism was a dynamic religious phenomenon. Moreover, the authors of these writings were apparently compelled to acknowledge the tendency "to Judaize." The respective authors' motives in mentioning "Judaizers" may not always be evident, but that does not refute the clear indication that there were non-Jews who embraced Jewish customs.

JAMES W. AAGESON

JUDAS (PERSON) [Gk *Ioudas*]. Greek form of the Hebrew name Judah.

1. See JUDAS MACCABEUS.

2. Son of Chalphi, and a commander of the army of Jonathan, who along with Mattathias the son of Absalom, remained faithful to Jonathan when the rest of his army deserted him (1 Macc 11:70). At the outset of his reign Demetrius II Nicator (Seleucid ruler 145–139 and 129–125 B.C.) repeated the promises of his father to Jonathan to grant favors to the Jews (cf. 1 Macc 10:25–45) in exchange for Jonathan's help in fighting Trypho, a former supporter of Alexander Balas. Demetrius II sent officers with a large army to intercept Jonathan, who was gathering troops throughout Palestine. The opposition set an ambush for Jonathan and his army at Hazor, causing all of his men to flee except for the two commanders. According to 1 Macc 11:72, Jonathan attacked, apparently singlehandedly, and put the enemy to flight, causing his soldiers to rejoin him for the battle. Pointing to Josephus (*Ant* 13.5.7 §161), who reports that about fifty men remained loyal to Jonathan, Goldstein (*1 Maccabees* AB, 442–43) surmises that the commanders were named in order to flatter their families, and that some subordinates of the commanders must also have remained loyal.

3. Son of Simon, the younger brother of Judas Maccabeus. In 138 B.C. Simon dispatched his two sons Judas and John (1 Macc 16:2) to fight against Cendebeus, commander of Seleucid forces along the coast of Judah, quartered at the newly fortified city of Kedron (1 Macc 15:41). John called out an army of 20,000 and advanced on Cendebeus. They met in a plain outside Modein, where

John's forces defeated the enemy and Judas was wounded (16:4–9). Four years later Simon took his sons Mattathias and Judas with him on their final tour of the area around Jericho. At a banquet held in the fortress at the town of Dok, all three men were ambushed by Simon's ambitious son-in-law Ptolemy, who hoped to gain favor with the Seleucid ruler Antiochus VII Sidetes by killing Simon.

4. Coauthor of a letter purportedly sent to Aristobulus and other Jews in Egypt (2 Macc 1:10). This Judas is not identified further, but scholars often assume that reference is to Judas Maccabeus. If this assumption is correct, the author perhaps placed Judas's name in the letter in order to connect more closely the introductory letters (1:1–9 and 1:10–2:18) of 2 Maccabees to the story of Judas which follows. In any case, the letter is possibly spurious and the inclusion of the single name "Judas" seems out of place.

5. The brother of Jesus, mentioned by Jesus' townspeople (Mark 6:3 = Matt 13:55). Jesus had come to his own part of the country or hometown (Gk *patris*), but was unable to perform many miracles there. The townspeople were offended by his works and wisdom and sneered that they knew his father, mother, and brothers James, Joses, Judas, and Simon. Scholars generally assume that the town in question was Nazareth, though neither Mark nor Matthew identifies it and Mark had previously (2:1) reported that Jesus was at his house *(oikos)* in Capernaum. The reference to Judas as Jesus' brother most naturally suggests common parentage, though some early Church fathers thought Judas and the others were sons of Joseph by a previous marriage, and Jerome contended that the Gk word *adelphai* meant "cousins."

Early tradition ascribed the book of Jude (a shortened form of the name Judas) to this brother. Scholars are divided over the matter. On the one hand, the book is generally dated around the end of the 1st century, too late for even a younger brother of Jesus, and it seems to look back upon the time of the apostles (v 17). On the other hand, it is difficult to understand why someone would choose as a pseudonym the name of so obscure a person. (See JUDE, EPISTLE OF; also *Mark* NCBC).

PAUL L. REDDITT

6. The disciple who betrayed Jesus. See JUDAS ISCARIOT.

7. Another of the twelve disciples, other than Judas Iscariot. In Luke 6:14–16 and in Acts 1:13 he is described as Judas *iakōbou,* "son of James" (not "brother" as in several versions). The James intended here has not been conclusively identified. In John 14:22 Judas is mentioned as "Judas (not Iscariot)," although Brown maintains that this refers to yet another Judas (*John* AB, 641).

This Judas is usually identified with the Thaddeus mentioned in the lists of Matt 10:3 and Mark 3:18. Brown believes that this equation is a mistaken tradition based on attempted gospel harmonies (*John* AB, 641; also Barrett 1956: 388). If Judas and Thaddeus are the same person, then Thaddeus and Lebbaeus, the equivalent found in some mss, were likely hypocoristic names used to avoid confusion with Judas Iscariot. Brown (*John* AB, 641) believes that the "(not Iscariot)" in John 14:22 is a later scribal addition, and the 5th century OL codex Veronensis reads "Judas *sed alius*" ("the other") in John 14:22; thus the earliest text may have read simply "Judas," with later changes being made to distinguish him from Judas Iscariot (Barrett 1956: 388).

Judas is not to be equated with Judas the brother of Jesus (#5 above; *ISBE* 2: 1115; cf. Koester 1965: 296–97). Neither is he the same as the author of the book of Jude, as was maintained by Tertullian (Barclay 1960: 198). The identity of Judas is further confused by a variety of other ms readings for John 14:22. In the Curetonian Syr Gospels (2d–7th centuries) he is "(Judas) Thomas" = Judas the Twin (*Acts* NICNT, 44, n. 46). In the Sinaitic Syr (2d–7th centuries) only "Thomas" is present. This is part of the Syriac tradition that Judas and Thomas are the same person (*Gos. Thom.* 80:10). In the Coptic Sahidic (3d–6th centuries), however, he is "Judas the Cananean," intended to equate him with the apostle Simon the Cananean (*John* AB, 641). The OL codices Vercellinis, Veronensis, Sangermanensis, and Claromontanus (all 4th–9th centuries) all read "Judas Zealotes" for the name in the list of Acts 1:13, as does the *Epistola Apostolorum* (before 150 A.D.; Lake and Cadbury 1932: 14).

Whatever his identity, the only event the Gospels record of his career is John 14:22, where he asks Jesus, "Lord, how is it that you will manifest yourself to us, and not to the world?"

8. Judas Barsabbas. See BARSABBAS (PERSON).

9. The owner of a home in Damascus where Paul stayed before his baptism by Ananias (Acts 9:11). Judas may have been a Christian; if not, he was not hostile to the movement. The Gk text reads *iouda,* not *ioudas* (Bruce *Acts* NIGTC, 201). The home of Judas is said to have been on the "street called Straight." This would have been either the decumanas or the cardo, the two perpendicular main roads of every Roman town. Tradition has identified the road of Acts 9:11 with the E-W Darb el-Mostakim, and has placed Judas's house near the W end (Bruce *Acts* NICNT, 199). Outside of the NT, reference has been found of two theaters in Damascus located on a street "called Straight" (Negev 1972: 88).

It may be that Luke included the name of Judas either because of his interest in people who hosted early Christians (Williams *Acts* BHNTC, 123; cf. Simon the tanner in Acts 10:6 and Mnason in Acts 21:16), or because such details are characteristic of visions such as Ananias' (Lake and Cadbury 1932: 102).

ROBERT D. MILLER II

10. A Jew from Galilee who led a rebellion against Roman authority in A.D. 6. In Acts 5:37 Gamaliel mentions

Judas of Galilee and Theudas as leaders of movements that failed because they were not of God. The Jewish historian Josephus is our main source of information about him (*Ant* 18.1.1–6; *JW* 2.8.1). He calls him Judas the Galilean, but says that he was born in Gaulonitis E of the Sea of Galilee. Judas may have been called "the Galilean" because Galilee was the center of his rebellion or because nearby Gaulonitis was associated with Galilee.

Josephus accuses Judas of sowing the seeds of rebellion that led to the Jewish war of independence in A.D. 66 and to the destruction of the Temple in A.D. 70. Judas and a Pharisee named Zaddok formed a Jewish sect that Josephus compares to the Pharisees, Sadducees, and Essenes. The members of this sect were in agreement with the Pharisees except in their passionate belief that the Jews should submit to the rule of God alone. For this belief they were willing to suffer hardship and death. Although Josephus does not give a name for Judas' followers many scholars have identified them with the Zealots.

The census of A.D. 6 was the occasion of Judas' rebellion. In that year, at the request of the Jews, Archelaus, son of Herod the Great, was deposed as tetrarch of Judea and Samaria. Archelaus had been a client of Rome, but now the area he had ruled came under direct Roman control as part of the province of Syria. In order to establish a basis for taxation, Quirinius, the governor of Syria, held a census of the population and property of this territory now under his supervision.

Many pious Jews probably saw this census as an encroachment on God's right to number His people and on His ownership of their land. The high priest was able to convince most people to go along with the new order. Judas, however, taught that only God could be called "master" (Gk *despotēs*) and that to submit to the census was to deny His lordship. God would deliver His people only when they rose up in armed rebellion against this outrage.

Judas' sons followed the example of their father. Menahem was a leader of the rebellion in Jerusalem shortly before the war with Rome (*JW* 2.17.8–9). Two more of his sons, James and Simon, were crucified by the Romans (*Ant* 20.5.2). Eleazar, probably Judas' grandson, led the defense of the fortress at Masada after the fall of Jerusalem (*JW* 7.8.1). See Hengel (1989: 76–145) for further information.

GARETH LEE COCKERILL

JUDAS ISCARIOT. One of the twelve disciples of Jesus, possibly from Judea, who served as treasurer of the itinerant group. His name always appears last in the lists of the Twelve and he is described as assisting the authorities in capturing Jesus. Judas Iscariot is mentioned twenty times in the four gospels and twice in Acts. Although he is designated as "one of the Twelve" in Matthew (26:14, 47) and Mark (14:10), and listed among them in Luke (6:16) as well as in Mark (3:19) and Matthew (10:4), he is not a central figure in the events portrayed.

A. The Name
B. The Act of Judas
C. Judas as One of the Twelve
D. Judas in the Four Gospels
 1. Mark
 2. Matthew
 3. Lukan Tradition
 4. The Gospel of John
E. Judas in Later Christian Tradition

 2. NT Apocrypha
F. Judas in Recent Discussion

A. The Name

Judas Iscariot appears in five different forms: (a) the original name, *Judas*, the Hellenized form of the Hebrew name *Yĕhûdâ* (Mark 14:43; Matt 26:25, 47; 27:3; Luke 22:47f; Acts 1:16, 25; John 13:29; 18:2f, 5); (b) *Judas Iscarioth* (Mark 3:19; 14:10; Luke 6:16; and as v 1 Matt 10:4 and Luke 22:47), which is the Semitic form of Iscariot; (c) *Judas Iscariot*, the Greek form (Matt 10:3; 26:14; Luke 22:3; John 6:71; 12:4; 13:2, 26; 14:22; and as variant readings in Mark 3:19; 14:10, 43; Luke 6:16); (d) *Judas, the one called Judas Iscariot* (Matt 26:14; Luke 22:3; John 6:71); and (e) *Judas, son of Simon Iscariot* (John 6:71; 13:2, 26).

The term "Iscariot" did not belong, at first, to the name itself but emerged to distinguish this Judas from many others of that name (cf. Luke 6:16; Acts 1:13; John 14:22). Schwarz lists nine interpretations of the term "Iscariot" and adds another of his own (Schwarz 1988). These fall into four main groups:

(i) Some hold that the term "Iscariot" indicates that Judas belonged to the group of the Sicarii: dagger-wielding assassins (Cullmann 1956: 15; 1970: 21–23; 1966); and thus they concluded Judas was a member of the Zealot party.

(ii) Others suggest that the term is derived from the Heb *šāqar* and designates the "false one." This highlights the character of Judas by alluding in his surname to his act of deception and betrayal (Torrey 1943; Gärtner 1971).

(iii) Others believe that the word designates his deed. He was a "deliverer" (root *škr*), and thus *ho paradidous* is a simple translation of (I)Skariot(h). It has been noted that the LXX of Isa 19:4 translates the *Pi'el* of *škr* ("capture and hand over") with Gk *paradidomi*, the same word used in Mark 3:19 to designate Judas (*ho paradidous*, "the one who betrayed him"). Morin (1973) takes the Markan designation to be a literal translation of *(i)skariot*, "the one handing over." Still others suggest that it refers to what Judas did for a living, concluding that he was a red dyer (Ehrman 1978; Arbeitman 1980) or a fruit grower (Krauss 1902).

(iv) Some believe that the name Iscariot indicates hometown. Was Judas perhaps the only one of the Twelve from Judea, from the village of Kerioth (Josh 15:25)? Billerbeck gives many cases where the Heb *'iš* is connected with a hometown and calls this "the right explanation" (1922: 537; so also Haugg 1930: 76 and Dalman 1929: 28–29). Askaroth or Askar, near Shechem, has also been suggested (Dalman 1935: 213). Schwarz (1988) proposes that the

original Aramaic yields the translation "the man from the city" = Jerusalem. This is supported by evidence from the Targums where the formula appears frequently at least in the plural, "men from the city," and the word *keriotha* is often used to mean Jerusalem. If those who suggest that the term "Iscariot" came into use only after Judas' death are correct (Torrey 1943; Vogler 1985) then it is also possible that not even the evangelists knew what it meant (Dalman 1902: 51–52).

Although it seems plausible (Klauck 1987) to interpret "Iscariot" as designating place of origin there is no consensus on this or on the place designated.

B. The Act of Judas

The usual word for the deed of Judas is *paradidonai,* which occurs 122 times in the NT, 57 times in connection with the capture of Jesus. It appears 18 times in the Gospels in the general sense; e.g., "It is necessary for the Son of Man to be handed over." The verb is connected directly with Judas 44 times. The word is many-layered, appearing often in the NT without reference to Judas (Popkes 1967).

For example, it is used of the chief priests who deliver Jesus to Pilate (Mark 15:1, 10; Matt 27:2, 18; Luke 24:20; John 18:30, 35); to describe his being delivered over to the "Jews" (John 18:36), or by the contemporaries of the apostles (Acts 3:13). Pilate "hands [Jesus] over" to be crucified (Matt 27:26; Mark 15:15; Luke 23:25; John 19:16). It is striking that Judas is never mentioned without some reference to this act; apart from it Judas has no recognizable identity in any of the Gospels.

In Luke 6:16 the noun *prodotes* (traitor) stands in its place, and in Acts 1:16 Judas is designated as the *hodegos,* the one who pointed the way to those who sought to take Jesus captive. However, most often Judas is simply noted as the "one who handed him over."

Judas is never mentioned by Paul, although Paul repeats the tradition of Jesus being handed over without specifying who did it (1 Cor 11:27). The same verb is used by Paul in theological contexts as in Rom 4:25: "Jesus was delivered to death for our misdeeds." In Rom 8:32 it is God who delivers his own son, and in Gal 2:20 Jesus delivers himself to death (so also Eph 5:2, 25). This widespread variation in usage of the term suggests caution in translating *paradidonai* as "betray." That translation is, in fact, quite peripheral in biblical literature (Klauck 1987: 45). The oldest occurrence of the word in connection with Jesus' capture occurs in 1 Cor 11:23b, where Judas is not mentioned by name. The tradition of *Judas* as betrayer was not found in Paul or in the earliest layers of the tradition.

Recent studies (Klauck 1987; Vogler 1985) of the pre-Synoptic layers of the tradition have led to two important conclusions. First, Judas was neither a symbolic figure nor a product of kerygmatic imagination, but a clearly recognizable historical figure, i.e., an actual disciple of Jesus. His designated name, Iscariot, comes from a Semitic milieu; and our knowledge that he belongs to the circle of the Twelve also rests on tradition which comes from the Aramaic-speaking Church. Missing from the earliest traditions are any aspects of the paid informant who, in remorse, later commits suicide. We have portrayed rather a man who is no worse than his colleagues in the circle of the disciples and who received as much recognition from Jesus as did the rest and may have been honored by Jesus in this singular mission. The subsequent understanding of his action as a "betrayal" may come from the Aramaic-speaking Church, which later felt compelled to make Judas at least partially responsible for the death of Jesus. It was covered up with a theological rationalization of the death of Jesus in which Judas became a villain.

Second, the interpretation of the deed of Judas was soon changed, for as the Church began to interpret the death of Jesus, an increasingly larger degree of blame was placed on Judas. He was initially remembered only as the first who had parted company with Jesus even though all the other disciples likewise had occasion to abandon Jesus, leaving him dying on the cross attended only by a few female followers. However, Judas' initial abandonment was eventually seen as a betrayal, and, eventually, the Church used the term "betrayer" to designate his deed, at times (Mark 14:21) avoiding the use of his name (Vogler 1985: 37; cf. Klauck 1987: 48–76).

C. Judas as One of the Twelve

The term "the Twelve" designates the inner circle of the disciples of Jesus. It occurs once in Paul, eleven times in Mark, eight times in Matthew, nine times in Luke–Acts, and four times in John. Judas' attachment to this group has posed theological problems since antiquity. These problems are even more acute if Jesus himself established this group and chose Judas to be a part of it.

The earliest reference to the Twelve is found in 1 Cor 15:5. As the negative tradition about Judas formed, it mentioned only eleven disciples at the post-resurrection appearances (Matt 28:16; Luke 24:9, 33; Mark 16:14; Acts 1:26; cf. 1:13). Given the theological difficulties of including Judas among the Twelve, it seems highly likely that the tradition of his attachment to the Twelve rests on historical fact. The more the community reflected on the capture and trial of Jesus and on Judas' role, the more critically they judged Judas' actions. They were, however, unable to conceal his place among the Twelve.

D. Judas in the Four Gospels

The negative portrayal of Judas can be seen by examining the evidence from the Gospels, written a generation or two after the events.

1. Mark. Mark says very little about Judas, and attributes his action to no particular motive. He is simply the one who handed Jesus over (3:19; 14:10, 44). Three parts of the Judas tradition that Mark appropriated from an earlier source are traceable:

a. In 14:43, 46, perhaps the oldest layer of redaction, it is simply reported that while Jesus was speaking, Judas, one of the Twelve, appeared with an armed crowd sent by the chief priests, lawyers, and elders, who seized Jesus and held him fast. The designation "Iscariot" is missing, and the verb *paradidonai* is not attached directly to Judas, attesting to the antiquity of the tradition.

b. Slightly more recent are the two reports in 14:18 and 14:21. The first states that as they sat at supper Jesus predicted that one of them, now eating with them, would hand him over. The second states that while Jesus' death is necessary, it is too bad for the person who will hand him

over. This tradition is promoting the view that the death of Jesus was no accident, that Jesus had a premonition of it, and that, indeed, it was according to the divine plan revealed in Scripture (Gerhardsson 1981).

c. A later development is evident in 14:10, where mention is made of a financial reward offered by the leaders.

According to Vogler (1985: 55–56), the final redaction of Mark reflects the following concerns:

(1) Judas was not just any false brother who had smuggled himself into the inner circle of the Twelve but was "chosen of God and of Jesus Christ." Judas had a place in the community, even participating in the Last Supper. He belonged to the core of the Church (cf. Klauck 1987: 63).

(2) Just as Jesus and his circle of disciples could not protect themselves from the defection of Judas, neither can the Church protect itself from defectors.

(3) Just as the Church is not certain that there will be no defectors, so the individual believer is never certain whether he/she may not ultimately become a defector. The question "Not I, surely?" (14:19) leads the readers of Mark to ask this critical question of themselves.

(4) Defection means not only changing one's loyalty but also brings a curse, or at least a woe (14:21). Perhaps it can even be connected with the anathema of the early Church, and in the later Church the term "kiss of Judas" refers to any act of defection.

2. Matthew. Matthew offers nothing by way of tradition that is not found in Mark, but the redactional development is notable. Three texts (26:15, 25, 50) are taken over from Mark but developed. In one of them Matthew quotes Judas directly (26:15), thus livening up the narrative and providing Judas with some new features. To each of the three texts he has added new materials (Vogler 1985: 71).

(a) In 26:14–16 Matthew adds the detail that Judas received money for turning Jesus in. There is no explanation of the reason for this. In the anointing story Matthew states that "the *disciples*" were indignant at the waste (26:8), while Mark has *"certain of those present"* (but Mark escalates their anger by mentioning it twice [14:4, 5], and gives no indication that Judas might be driven by love for money).

(b) In Matt 26:20–25 Judas is portrayed as an unscrupulous man. Although he has already put into action his plan to betray Jesus (26:14) and should not even be there eating with them, still in the hearing of the others he asks: "Could it be I?"

(c) Matt 26:47–50 highlights this character trait when Judas brazenly meets Jesus in the garden with a kiss and the appellation: "Hail, Rabbi." In Mark he greets him with the words "Rabbi, Rabbi," and in all three Synoptic Gospels he kisses (in Luke he is about to kiss) Jesus. In Matthew the ruthless Judas of questionable moral background carries out his act, seeks repentance by trying to return the money (Matt 27:3–5), throws it down in the Temple, and goes out and hangs himself (27:5).

To heighten this dark picture of Judas, Matthew draws sharp contrasts between Judas' behavior and that of others around him: the woman who anoints Jesus' feet (26:6–13), the disciples at the table (26:20–35), and finally between Judas and Jesus himself (26:47–56).

Matthew's account stands alone in describing Judas' remorse and even his confession of guilt (27:3–10). The account is unlike that of Luke, but at no point does Matthew pass judgment on Judas or ascribe any ulterior motive to his deed.

In Matthew, Jesus relates to Judas in all gentleness during those last days, as seen especially from his greeting in the garden. According to Luke, Jesus addressed him by name, saying: "Judas, do you hand over the Son of Man with a kiss?" (Luke 22:48). But Matthew has Jesus using a word he uses for no other person in direct address: "Friend, what are you here for?" (Matt 26:50). The Greek word *hetairos* ("friend") occurs only in Matthew and each time as direct address; twice in parables (20:13; 22:12) and once here. In all cases the one addressed is committing an ungrateful action against the one who has been generous. Here it highlights the very important relationship of trust which exists between Jesus and Judas.

Matthew's portrait of Judas is based on traditions found in Mark's gospel, except for the account of his death preserved in 27:3–10. Matthew's redaction of the Markan materials is noteworthy. The narrative becomes more lively by the introduction of direct address in 26:15, 25, 50. More important, Matthew has added new dimensions to the portrait of Judas. In 26:14–16 he provides additional information about the amount of money Judas received. In another passage (26:20–25) Jesus traces Judas' deed back to the inherent nature of Judas: "It would have been better for that man if he had never been born" (24, cf. Mark 14:20–21; Luke 22:22). In Matthew's account the perversity of Judas is heightened by the fact that he has already taken steps, as one of the Twelve, to betray Jesus (26:14–16), and despite this joined the others in the final meal.

It is hardly correct that "seen from a purely human standpoint, [Jesus] must have hated Judas like poison" (Guardini 1964: 416). Rather, Matthew's portrait of Judas serves as an example to the community. The transgressor, or the betrayer, is openly exposed. Peter, from Galilee, finds his way to genuine repentance, whereas Judas, from Judea, in spite of his remorse exercises the final judgment on himself. This represents a considerable escalation of the debt laid on Judas.

3. Lukan Tradition. In the Lukan writings there are four separate pieces of tradition dealing with Judas:

a. Luke 22:1–6. While Matthew suggests that Judas acted because of love for money, Luke goes considerably beyond that and attributes it to the entrance of Satan into Judas (22:3). This fits with Luke's notion that the devil left Jesus for a season (Luke 4:13) now to return, and through one of the Twelve, Satan will now bring the conflict between God and Satan to a decisive stage. Luke does not, like Mark and Matthew, have Jesus rebuke Peter with the words: "Get you behind me Satan" (Mark 8:33; Matt 16:23). Only in Luke does Satan enter Judas. Luke, furthermore, sets Judas on equal footing with the chief priests and officers of the Temple because he goes to negotiate with them. They want to take Jesus into captivity but cannot because of the crowds (19:47; 20:19). Luke provides a reason for Judas' deed and also prepares for the act that made it possible to capture Jesus. Just as Ananias is possessed by Satan in Acts 5:3, so here Satan takes over Judas and sets the execution of Jesus into motion. But Luke also portrays Judas as acting in partnership with the upper levels of authority in Judaism.

b. Luke 22:21–23. It is remarkable that in Luke's description of the Last Supper Judas stays until the very end; indeed, he is not even exposed as a traitor at this meal. If Matthew and Mark have avoided the problem of having Judas participate in this most intimate meal with Jesus by exposing him at the outset, Luke introduces a different problem: How can the betrayer, possessed as he is of Satan, participate in the inner circle of the Twelve with Jesus? Luke affirms that even in this intimate circle a betrayer, indeed one possessed of Satan, can be present. He is known to Jesus (22:21–23) but not exposed. Instead, in Luke's narrative the disciples break out into a jealous dispute about who among them ranks the highest. Perhaps it is Luke's way of saying that the act of betrayal is not restricted to one person alone, and although Judas' act is singular, there is in this context also a reminder that Peter will deny his Lord three times, in spite of his assurances that he will not.

c. Luke 22:47–53. The words "with . . . Judas . . . at their head" (v 47) are Luke's own, stressing Judas' leadership role. He does not actually depict Judas kissing Jesus, although it is clear that he intends to do so. Jesus addresses Judas by name with no qualifiers, signifying an early tradition. Most striking is also the way in which Judas is interrogated by Jesus (v 48); "the hour of darkness may now reign" (v 53), but ultimately Jesus is in charge. As Grundmann (*Luke* THKNT) has said: "The One who has come to free those sitting in darkness . . . came under their power himself through those who served it. Their hour will however be ended by his hour and the power of darkness will be overcome through his victory."

d. Acts 1:16–20. At the center of this narrative stands Peter, acting as an interpreter of the act of Judas. Missing is any reference to Satan; instead, Peter (through Luke's redaction) speaks of the way in which Scripture was fulfilled through the deeds of Judas. Nothing is said of a betrayal, rather, his deed is described as "acting as a guide to those who arrested Jesus" (Acts 1:16). To be sure, as Lüthi (1955: 113) has noted, while Matthew attributes an immoral dimension to Judas' financial negotiations, here it is explicitly described as "the price of his villainy" or unrighteousness. Luke sees *adikia* as related to *mamona* (16:8), and while his account of the death of Judas is clearly secondary to that of Matthew, neither one necessarily reflects historical reality. Luke tied it to two OT texts: Pss 69:26 and 109:8.

As for elements of the tradition, Luke offers little information about Judas that is not found elsewhere in the NT. Yet the shape and form which he gives it is uniquely his own, directed no doubt to his own community. By now it is clear that a supernatural element is needed to explain his action, and thus Satan is introduced for the first time. By having Judas at the Last Supper throughout the evening, Luke shows that satanic powers can permeate the very inner circle of believers when they meet with their Lord. His Judas does not seek repentance. He ends his own life even though "he had this ministry with us" (Acts 1:17). But Luke's understanding of salvation history also includes the victory of Jesus over Judas, the victory of good over evil, of light over darkness.

4. The Gospel of John. There are a total of five references to Judas Iscariot in the Fourth Gospel.

a. John 6:64–71. Unique is the introduction of Judas' unbelief so early in the ministry of Jesus. While the Synoptic Gospels have also introduced Judas when naming the Twelve, they have only identified him further with the words "the one who handed him over." John, however, introduces Judas here to show that Jesus is aware that, although he chose Twelve, "yet one of you is a devil" (v 70). Later, of "the Jews" Jesus says that their "father is the devil" (8:44). Here John's concern is to affirm that Jesus knew everything: "Jesus knew from the first who those were that did not believe and who it was that would betray him" (6:64). Where Luke speaks of Satan entering into Judas, John states flatly: "One of you is a devil" (6:70). John's gloss explains that "he meant Judas, son of Simon Iscariot."

b. John 12:1–8. John's editing of the anointing story builds on certain traditional materials, e.g., only here does John refer to Judas as "Iscariot" and only here does he use the expression *heis tōn mathētōn*, "one of the disciples." He prefers the term *ek tōn mathētōn*, and he uses the traditional formula "the one who was to betray him." What is new in this story is the notice that Judas served as treasurer and, secondly, that he was a thief who used to pilfer the money put into the common purse. Since the narrative reads well without any reference to Judas whatever, this could well be a later Johannine redactional addition. Since no group can long survive without confidence in its treasurer, and since the other gospels do not mention it, we may assume that John is here adding later gossip for which there is no historical evidence. It does, however, fit into his overall attempt to demonize Judas.

c. John 13:2–30. The context is the footwashing and the Last Supper. Judas serves as the backdrop of the footwashing, for having spoken of his willingness to demonstrate the love Jesus had for his own, the narrative abruptly jars us with: "The devil had already put it into the mind of Judas . . . to betray him." We are led to believe that Judas participates in the washing of the feet without objection. The gloss in v 10 addresses the matter; Jesus was aware of who would betray him. He also knows whom he has chosen, but one of them is excluded from this choice, "the one who eats bread with me has lifted his heel against me." Jesus is then described as being in "deep agitation of spirit" (v 21) because of the betrayal. The scene is similar to that of the Synoptics: the disciples ask who is it, and finally by dipping bread in the dish and giving it to Judas the secret is revealed. "As soon as Judas had received it, Satan entered him." When Jesus tells him, "Do quickly what you have to do," no one at the table understood what he meant. The perplexity of the disciples also indicates that Judas was not an "outsider" from the start. Rather, the reference to Satan entering him after he ate the bread indicates that Judas was a believer like the other disciples. He fully participated in their common life with Jesus. Twice John says that he received the bread (v 27, 30). But for John light and darkness are essential parts of moral reality, and when Judas departs he takes leave of the light and goes out into the darkness.

d. John 17:12. Even in the great prayer of Jesus recorded in chap. 17, the discordant note of Judas is sounded, although he is not named. "Not one of them is lost except the son of perdition who must be lost, for

Scripture has to be fulfilled." The divine will is here applied to Judas, and he is called something similar to the son of iniquity (2 Thess 2:3), i.e., someone born from and destined for iniquity. Judas appears here more like an automaton than a free, willing person.

e. John 18:1–11. What is striking here is the mechanical behavior Judas displays. Described only as "Judas, the betrayer" he appears as the leader of the contingent of soldiers and police provided by the chief priests and the Pharisees, equipped with torches, weapons, and lanterns. John confines himself simply to saying that after Jesus had come forward to ask them whom they were seeking and had identified himself, "there stood Judas the traitor with them" (v 5).

For John there is no genuine interaction between Jesus and Judas. The latter represents the evil darkness and he comes across the stage as an actor merely playing his part. Jesus can only rebuke him for murmuring about the waste of money at the anointing. John blames that solely on Judas and for the worst of motives.

In the final scene in Gethsemane in John's account Jesus says nothing to Judas. Luke leaves open the question whether Judas kissed Jesus in the garden, but John portrays no interaction at all between the two. For him the realm of darkness cannot touch the Lord of Light, and he damns Judas into darkness. It may make good drama, but we have moved far from a description of the actual historical situation.

E. Judas in Later Christian Tradition

1. The Apostolic Fathers. The *Shepherd of Hermas* alludes to betrayers in *Herm. Sim.* viii.6.4 who cannot escape death. Although Judas is not named, he could be in mind. In *Herm. Sim.* ix.19.1–2 there is an allusion to Judas, since all betrayers are condemned to death with no hope of repentance. In the *Martyrdom of Polycarp* (#6) it is said that those who betrayed Polycarp will receive the same punishment as Judas. In the Fragment of Papias transmitted by Irenaeus (*Haer.* 5.33.3f.) it is said that Jesus met unbelief in Judas, and that he had been told he would not see the Kingdom of Heaven (Hennecke 1963–65, 2: 62–63). Papias shared the Fourth Gospel's assessment of Judas. In the Papias fragment transmitted by Apollinaris of Laodicea (about 310–390), there is a gruesome and detailed account of Judas' death. Although it takes some elements from Luke's account, it goes much beyond it, presenting Judas as "a model of great ungodliness" (cf. Gk *mega de asebeias hypodeigma*) to terrorize the reader and to prevent others from taking the path of betrayal.

2. NT Apocrypha. The *Gospel of the Ebionites* (first half of 2d century) mentions Judas (the) Iscariot as the twelfth disciple (1) with no reference to the betrayal. The *Gospel of Peter,* the earliest noncanonical account of the passion (dated about 150), also has no reference to Judas or to his deed or his fate (14:59). In the *Acts of Peter,* Peter, smitten with sharp affliction, complains about the devil and his manifold artistries, mentioning in particular his influence on Judas: "You forced Judas, my fellow-disciple and fellow-apostle, to act in a godless manner, so that he delivered up our Lord Jesus Christ, who shall punish you for it" (8). In the *Acts of John* appears the following: "I am your God, but not the God of the Traitor" (96). The radical dualism is evident.

In the *Acts of Thomas* (3d century, E Syria) the devil brags, "I am the one who stirred up Judas and bribed him to deliver up the Christ" (32). A later reference in the same work warns the reader: "Abstain . . . from thievery, which enticed Judas Iscariot and brought him to hanging" (84).

The *Acts of Pilate* (latter half of 4th century) contains an extensive legend about the death of Judas, meant to fit in between Matt 27:5a and 27:6. In this episode, Judas goes home and discusses his plan with his wife, who tries to dissuade him, but through a miracle he is proved right that Jesus will be raised up in three days (*Acts Pilate* pt. I; James 1955: 116). The *Arabic Infancy Gospel* presents a legend which shows that already in early childhood Judas was possessed of the devil (35).

The Coptic *Book of the Resurrection of Christ by Bartholomew* describes Jesus' encounter with Judas in hell: "he turned to Judas Iscariot and uttered a long rebuke, and described the sufferings which he must endure. Thirty names of sins are given, which are the snakes which were sent to devour him." After the harrowing of hell, only three souls are found there: Herod, Judas, and Cain (James 1955: 183). One fragment states that the reason Judas could not be redeemed from hell is that before his hanging he had worshipped the devil in the form of a snake (Vogler 1985: 130). A further Coptic fragment deals with a miracle of feeding in which Judas, even before he had decided to betray Jesus, remained aloof from the other disciples and did not receive bread to distribute to the crowd (Vogler 1985: 131).

Against this strong tide of rejection of Judas, it is interesting to note that according to Irenaeus, Theodoret, and Epiphanius there existed a *Gospel of Judas.* Unfortunately, nothing remains of it, but it would appear to have emerged from a group of gnostics who did not concur in the wholesale condemnation of Judas. Instead they celebrated the mystery of his betrayal and read the *Gospel of Judas* as holy writing (Hennecke 1963–65, 1: 313–14), as suggested by Irenaeus: "Others again allow Cain to be born of higher power and confess Esau, Korah, the Sodomites, and others as their relatives, which although they are hated by their creator, yet he did them no great harm. For the Sophia took from them what belonged to them as her own. The betrayer Judas knew this, he alone recognized the truth and completed the mystery of betrayal; he separated all earthly and heavenly matters. This composition they call the Gospel of Judas" (*Haer.* 1.31.1). Apparently this group felt that Judas rendered a great service by handing Jesus over to his enemies, thus bringing about the salvation of humanity. Above all, it is clear from the discoveries at Nag Hammadi that there still remained people within the early Church who could treat Judas without polemic as a human being, not as a demonic creature. In the Dialogue of the Savior he appears as a normal, inquisitive disciple alongside Matthew and Mariam (Robinson 1977: 229–38).

The evidence for this positive interest in Judas is remarkable. It could well be the forerunner of the positive interest many Jews displayed in Judas, and indeed may be inherent in the early gospel accounts. Any attempts, however, to allow the historical Judas to emerge were in time

overshadowed by a reading of the gospel in which people are divided into good people and bad people, and according to which bad people have no hope of redemption. It is hard to find support in the texts for such an attitude on the part of Jesus toward Judas.

F. Judas in Recent Discussion

The numerous novels about Judas in the 20th century, and their revisions of the traditional point of view (not to mention contemporary movies or musicals in which he figures) signals the continuing search for the Judas of history. From a theological perspective, the carefully nuanced discussion of Judas by Karl Barth (1957: 458–507) indicates that the issue is more complex than either the gnostic gospels of the 2d century or the canonical gospels of the 1st century admit.

The dilemma which the NT texts pose is that Judas is clearly a disciple of Jesus from early on. He enjoyed the trust of Jesus and the respect and confidence of the group. The paltry sum for which he allegedly "betrays" Jesus is hardly an adequate motive to account for the action. It is impossible to ascertain what is being betrayed. Certainly if Jesus did not want to allow himself to be captured on that night he had plenty of opportunity to flee. Is it possible that Judas did not so much betray Jesus as was betrayed by him, i.e., that the hopes and wishes of Judas, along with those of the other disciples, were dashed when Jesus had his opportunity to confront the powers? Was Judas in fact selected by Jesus personally to be the agent who would make contact with the authorities to avoid tumult or a riot, and that the remorse of Judas came only as it became clear to him that Jesus, too, would die and not establish his kingdom?

The sources do not reveal answers to these questions, but there has been much discussion of this issue from at least the time of Origen, who first posed the theological questions (Laeuchli 1953). As Origen already noted, the discrepant accounts of the various Gospels create the historical problem, which precedes the theological problem. Thus the gospel writers have, in their own way, contributed to the enigma of the life and work of Judas Iscariot, an enigma which defies easy solution. In no other person do the elements of free will and divine providence come together so ambiguously. No doubt this is the reason why Judas has held such a compelling attraction for theologians and artists over the centuries and does even now. In a study of Judas, history and theology came together. But even more directly, ethics as well, for those who condemn Judas, and especially those who use him to fuel the fires of anti-Semitism, have not learned the meaning of Christ's death, which was meant to put an end to all judgment and condemnation. Is it too much to suggest that whatever Judas did, he too was covered by the intercessory prayer of Jesus from the cross: "Father, forgive them for they know not what they do"?

WILLIAM KLASSEN

JUDAS MACCABEUS. The leader of the Jewish revolt against the religious persecutions of Antiochus IV Epiphanes. He was of a priestly family of the *mišmar* (tribe) of Jehoiarib (1 Chr 24:7). His family home was the village of Modiin, on the western slopes of the Judean hill country. He was the third son among five (1 Macc 2:2) of his father Mattathias.

Judas Maccabeus became the leader of the revolt after his father died, at about the end of 166 B.C.E. He led it from guerrilla warfare into a full-fledged revolt against Seleucid rule and he won some battles of great military

importance, showing an outstanding military talent. He also took the warfare beyond the borders of Judea and entered into diplomatic relations with Rome. These two activities became major lines of policy in the development of the Hasmonean house later on.

We may assume that he was chosen to be the leader of the revolt after Mattathias' death, though he was not his eldest son, either because of some former military experience or because of the talent he showed in the exploits during the earlier stages of the revolt. Regardless, he was not a village boy or a farmer who became a military leader, but a son of an important family, which opposed the Hellenization and its supporters. According to 2 Maccabees he was forced to leave Jerusalem at the beginning of the persecution, which indicates that he was staying there at that time (1 Macc 5:27) and was not in his hometown of Modiin.

Judas' military career is covered by our two principal sources, 1 Maccabees and 2 Maccabees. We will list below his battles and military exploits. Judas' first known battle was against Apollonius, who came from Samaria (1 Macc 3:10), where he was probably a governor. Apollonius was defeated somewhere on his way toward Jerusalem, and fell on the battlefield. The battle took place probably toward the end of 166. Shortly afterward Judas defeated Seron at Beth-Horon (1 Maccabees 3:13–26). Seron was probably an officer at the coastal region.

Judas' third and most important battle was at Emmaus. In this battle he was forced to use new tactics because his opponent, Gorgias, was a better commander and had under his command a bigger army. Judas indeed used more complicated maneuvers and counter-movements than before. Intelligence, ruse, night march, moral exhortation, consideration of topographical conditions, and discipline—all were used in Emmaus. The Syrian forces were defeated and retreated to the coastal plain, in about the first half of 165 B.C.E.

In the battle of Beth-Zur, the Syrian commander was Lysias, the regent of the W part of the Seleucid Empire. Lysias tried to invade Judea from the S, but was stopped by Judas at Beth-Zur. Scholars think that he was not defeated by Judas, but left the country for political reasons.

After Lysias' retreat, Judas Maccabeus took over the Temple Mount and cleansed the Temple of the impurities caused by the Hellenizers and the Seleucid garrison (December, 164 B.C.E.). The following year (163 B.C.E.) saw the expeditions of the Maccabees to save Jews in Galilee and Transjordan, who were threatened by their enemies.

Encouraged by these successful exploits, Judas attacked Akra, the fortress of the Seleucid garrison and the shelter of the Hellenizers, his internal enemies. To this attack on the most vital base of the Seleucid suzerainty in Judea, Lysias, now the regent of the new boy-king Antiochus V, reacted forcefully by a second expedition led by himself and accompanied by the king (spring 162 B.C.E.).

Lysias had with him a greater army than ever before, including elephants. He invaded Judea again from the S and put a siege on Beth-Zur, which surrendered to him. Then he beat off Judas at Beth-Zecharia and followed him to Jerusalem, where he besieged him in the Temple Mount. It looked as if the revolt had come to its end, and it would only be a matter of time till the besieged would surrender. But Judas Maccabeus and his followers defended themselves courageously and before being able to take the place, Lysias was forced to return to Antiochia because of internal problems. He raised the siege and made a treaty with the insurgents.

Whatever the situation in Judea at that time, Judas did not acquiesce to it. Yet the new Seleucid king, Demetrius I, was not ready to let Judas be active in Judea or to change the arrangements made by the Seleucid government.

At first Nicanor, who was appointed *Strategos* (military governor) of Judea, negotiated with Judas (*mala fide* according to 1 Macc 7:27–30; *bona fide* according to 2 Macc 14:18–28), but when this failed they met on the battlefield. First in Kefar Salma, where Nicanor was repulsed and retreated to the Akra, and later at Adasa, where he was killed and his army dispersed (on the 13th of Adar, 161 B.C.E.).

At this juncture, before the battle of Adasa, when Judas Maccabeus was in all probability awaiting a new expedition to be sent by Demetrius to retaliate and to crush the revolt, he sent an ambassador to Rome to seek support against this impending threat. The result was a treaty between the Romans and the Jews (1 Macc 8:23–32). But this treaty did not prevent Demetrius from sending Bacchides to Judea. Bacchides' army met Judas at Elasa. The Jewish forces were defeated and Judas Maccabeus fell on the battlefield (160 B.C.E.).

A list of battles is not enough to estimate Judas' generalship, statesmanship, and leadership. We have to estimate his achievements within the context of that period. Judas is the person who contributed most to the repel of the persecution, decreed by Antiochus IV and instigated by the Hellenizers. This achievement was a direct result of the inability of the Hellenizers to rule Judea and the incessant demand on the Seleucid government to allocate armies to support them and to pursue the religious persecution ordered by the king. Judas Maccabeus is the person under whose leadership the rebels made this policy untenable and instead of settling the situation to the benefit of the Seleucid government turned it into an unsustainable expense.

Using the Jewish potential power to the utmost, Judas Maccabeus caused not only a change of Seleucid policy, but also the dimunition of the influence of the Hellenized nobility in Judea with the Seleucid government. This was a beginning of a change in Jewish society, which ended in it expelling the Hellenized component and rebuilding on new foundations.

Judas' activity was not limited to Judea alone, and his succor expeditions paved the way for the conquest of Israel and the foundation of a Jewish state all over the country.

Though mainly a warrior, Judas Maccabeus was well aware of the importance of diplomacy for the achievement of his aims. These aims were beyond the immediate war against Antiochus' policy, and they were, so it seems, national and political, and perhaps also dynastic. Judas took the important step toward involving Rome in the struggle against the Seleucids and was also involved in negotiations with the Seleucid authorities. Although Judas' diplomatic activity was futile, it showed the way to his followers.

His most impressive achievements were military. His leadership attracted his people and he made of his supporters an army. He knew the means to win on the battlefield, but he could not (or it was premature at the time) turn his military achievements into political gains. This was done by his brothers.

Judas Maccabeus is admired in 2 Maccabees, he is highly appreciated in 1 Maccabees, and he is critically or skeptically viewed in the book of Daniel, where he is called (according to most commentators) "a little help" (Dan 11:34). Historically, his achievements were tremendous, though they may have sown seeds of future problems.

URIEL RAPPAPORT

JUDE, EPISTLE OF. The Epistle of Jude was written to warn against false teachers and is found as the 26th book in the NT canon.

A. Form and Structure
B. Literary Relationships
C. Theological Character
D. The Opponents
E. Date
F. Authorship
G. Destination
H. Message

A. Form and Structure

A careful analysis of the structure of Jude is essential to an adequate understanding of it:

1–2	Address and Greeting
3–4	Occasion and Theme
3	A. The Appeal to Contend for the Faith
4	B. The Background to the Appeal: The False Teachers, Their Character and Judgment (forming Introductory Statement of Theme for B^1)
5–23	Body of the Letter
5–19	B^1. The Background: A Midrash on Four Prophecies of the Doom of the Ungodly
5–7	*"Text" 1: Three Old Testament Types*
8–10	+ interpretation
(9)	including secondary "text" 1a: Michael and the Devil
11	*"Text" 2: Three More Old Testament Types*
12–13	+ interpretation
(12–13)	including secondary allusions
14–15	*"Text" 3: A Very Ancient Prophecy*
16	+ interpretation
17–18	*"Text" 4: A Very Modern Prophecy*
19	+ interpretation
20–23	A^1. The Appeal
24–25	Concluding Doxology

This analysis should make clear that in form Jude is a letter which contains (in vv 4–19) a "midrash" or section of formal exegesis. It is important to notice how the initial statement of the theme of the letter (vv 3–4) contains two parts (A and B) which correspond, in reverse order, to the two parts of the body of the letter (B^1 and A^1). The main purpose of the letter is the appeal "to contend for the faith" which is announced in v 3 and spelled out in vv 20–23. But v 4 explains that this appeal is needed because the readers are in danger of being seriously misled by certain false teachers. The claim made in v 4 that these teachers are people whose ungodly behavior has already been condemned by God is then substantiated by the exegetical section (vv 5–19) which argues that they are the ungodly people of the last days to whom many scriptural types and prophecies of judgment refer. Despite its length and central position, the discussion of the false teachers (vv 4–19) is not the main object of the letter. It establishes the danger in which the readers are placed by the influence of the false teachers and so performs an essential role as background to the appeal, but the real climax of the letter is reached only in the exhortations of vv 20–23. In vv 4–19 Jude establishes the need for his readers to "contend for the faith," but only in vv 20–23 does he explain what "contending for the faith" involves. Thus his negative polemic against the false teachers is subordinate to the positive Christian teaching of vv 20–23.

Further explanation of the structure of the "midrash" (vv 4–19) is needed. This is a very carefully composed piece of scriptural commentary which argues for the statement made in v 4. Though the form of argument will be strange to modern readers, its hermeneutical presuppositions and exegetical methods were widely accepted in contemporary Judaism and can be paralleled especially from the Qumran commentaries on Scripture (the *pešārîm*), as well as from some other parts of the NT (e.g. 1 Pet 2:4–10).

There are four main "texts" (vv 5–7, 11, 14–15, 17–18), each followed by a section of interpretation (vv 8–10, 12–13, 16, 19). These "texts" *function* as texts in the midrash, but are not all scriptural quotations: in fact, none is an actual quotation from our canonical OT. The first pair of "texts" (1 and 2) are summaries of Scripture: three groups of people (in text 1) and three individuals (in text 2) who were famous scriptural examples of divine judgment and here function as types of the false teachers who are similarly doomed to judgment. "Texts" 3 and 4 form a second pair, this time of verbal prophecies of the false teachers. "Text" 3 is quoted from *1 En.* 1:9 and "text" 4 from oral tradition of the apocalyptic teaching of the apostles: they show that the false teachers and their doom have been prophesied from the very earliest times up to the most recent times.

Despite the somewhat anomalous nature of the "texts," the midrashic structure of texts followed by interpretations is clear, since the distinction between text and interpretation is marked in three ways: (1) The tense of the verbs in the "texts" is past or future, referring to types in the past or prophesying the future (in "texts" 2 and 3 the aorists are prophetic past tenses), whereas the interpretations use present tenses, referring to the fulfillment of the types and prophecies at the present time, i.e. in the form of

Jude's opponents. (2) Phrases with *houtoi* ("these people") are used in a formulaic way to introduce each section of interpretation. These resemble similar formulae used in the Qumran commentaries (4QFlor 1:2, 3, 11, 12, 17; 4QpIsa 3:7, 9, 10, 12; 4QpIsa^b 2:6–7, 10) and occasionally elsewhere (Gal 4:24; 2 Tim 3:8). In Jude they serve to identify the false teachers as the people to whom the prophecies refer, and so make the transition from the prophecy to its application to the false teachers. In each case the interpretation then describes the false teachers in a way which conforms to the prophecy. (3) Introductory formulae introduce "texts" 1, 3 and 4, and distinguish "texts" 3 and 4 from the preceding sections of interpretation. "Text" 2 lacks an introductory formula, but is sufficiently marked out by its form as a prophetic woe-oracle.

In addition to the four main "texts," there is a secondary "text" (1a), which is introduced in v 9 to help the interpretation of "text" 1. This is a summary of an apocryphal account of the death of Moses. The use of such a secondary text in the course of the interpretation of another text can be paralleled in the Qumran commentaries, as can the incorporation of implicit allusions to other texts in the course of the interpretation of a given text, a practice which Jude adopts in vv 12–13, where there are allusions to Ezek 34:2; Prov 25:14; Isa 57:20; *1 En.* 80:6.

Exegetical techniques used in the midrash include the lavish use of catchword connections. Words from the same stem are used to link "texts" together (the practice known by the rabbis as *gezera sawa*), to link a "text" to its interpretation, and to link the introductory statement of theme (v 4) to the "texts." For example, the catchword "ungodly" links "texts" 3 and 4 (vv 15, 18), and both these "texts" to v 4. But not all the catchword connections are visible in English translations. Again, such use of catchword connections can be amply paralleled at Qumran and elsewhere (e.g. 1 Pet 2:4–10).

Thus Jude's midrash resembles the Qumran commentaries in its use of exegetical formulas (especially the *houtoi* phrases) and exegetical methods (especially catchword connections). In form it resembles especially the so-called "thematic *pešarîm*" (such as 4QFlor). It also shares with the Qumran commentaries, as also with much early Christian exegesis, the hermeneutical presupposition that Scripture is prophetic of the last times in which the interpreter and his community are living, and indeed actually refers to themselves and their enemies. It seems that Jude's midrash is an unusually sustained and elaborate exercise in the kind of scriptural exegesis which must have been typical of the early Church from an early date and declined to the extent that Christianity moved away from its Palestinian Jewish origins.

B. Literary Relationships

Many of Jude's pervasive allusions to the OT have already been noticed in section A. Scholars have often supposed that Jude, like most NT writers, used the LXX version, but the evidence is in fact against this. He uses some standard items of Jewish Greek vocabulary and idiom, which are found in the LXX, but none of his many allusions to specific verses of the OT echoes the language of the LXX. Moreover, some of his allusions depend on a meaning of the Hebrew text which is not rendered in the LXX. In two cases (Prov 25:14: Jude 12; Isa 57:20: Jude 13) the LXX gives a quite different sense from that of the Hebrew, and Jude is plainly following the Hebrew. In a third case (Ezek 34:2: Jude 12), while Jude's dependence on the LXX is not impossible, his allusion is closer to the Hebrew. It seems, therefore, that it was with the Hebrew Bible that Jude was really familiar. When he wished to allude to it, he did not stop to find the LXX translation, but made his own translation, in terms appropriate to the style and content of his work.

Jude evidently set high value not only on Jewish Scriptures which are now canonical, but also on apocryphal works. Besides his explicit quotation from *1 Enoch* in vv 14–15 (*1 En.* 1:9), there are further allusions in v 6 (cf. *1 En.* 10:4–6, 12; 12:4; 15:3; 15:7; and perhaps also *2 En.* 7:2; 18:4–6) and in v 13 (*1 En.* 80:6), while the scheme of four metaphors from nature in vv 12b–13 seems to relate to *1 En.* 2:1–5:4; 80:2–7. We cannot be sure of the extent of the Enochic corpus he knew, but he was evidently very familiar with parts of our *1 Enoch*. He treats Enoch, whose prestige he indicates in the phrase "the seventh from Adam" (Jude 14; cf. *1 En.* 60:8; 93:5; *Jub.* 7:39), as an authoritative prophet. Since he also treats an oral prophecy of the apostles (v 18) as authoritative prophecy, we do not have to conclude that he had a canon of Scripture which included the Enoch literature along with OT books. He may (like the author of *4 Ezra* 14) have treated apocalypses such as *1 Enoch* as authoritative literature alongside the OT canon. The evidence is not sufficient to determine the exact status the Enoch literature held for Jude. As for his text of Enoch, there are some indications in v 6 and vv 14–15 that he knew the Aramaic original rather than, or as well as, the Greek version, though since the relevant chapters of *1 Enoch* in Greek are extant only in one manuscript, we cannot be entirely sure that he did not know a form of the Greek text closer to the Aramaic than ours.

Another apocryphal work was the source of Jude's reference to the dispute over the body of Moses (v 9). This story is no longer extant in the form Jude knew it, but from various sources it can be reconstructed with high probability and in some detail (see Bauckham, *Jude, 2 Peter* WBC, 47–48, 65–76), as follows:

> Joshua accompanied Moses up Mount Nebo, where God showed Moses the land of promise. Moses then sent Joshua back, saying, "Go down to the people and tell them that Moses is dead." When Joshua had gone down to the people, Moses died. God sent the archangel Michael to remove the body of Moses to another place and to bury it there, but Samma'el, the devil, opposed him, disputing Moses' right to honorable burial. [The text may also have said that the devil wished to take the body down to the people, so that they would make it an object of worship.] Michael and the devil engaged in a dispute over the body. The devil slandered Moses, charging him with murder, because he slew the Egyptian and hid his body in the sand. But Michael, not tolerating the slander against Moses, said, "May the Lord rebuke you, devil!" At that the devil took flight, and Michael removed the body to the place commanded by God. Thus no one saw the burial-place of Moses.

This story may have been known to Jude as the ending of the *Testament of Moses*, whose extant Latin text breaks off before the end. The probability of this would be increased if, as some scholars have thought, there are allusions elsewhere in Jude to the extant text of the *Testament of Moses* (Jude 16: cf. *T. Mos.* 7:7, 9; 5:5; Jude 3: cf. *T. Mos.* 4:8), but these alleged allusions are far from certain.

That there is a close relationship between Jude and 2 Peter is obvious to any careful reader. The resemblances are largely between Jude 4–13, 16–18, and 2 Pet 2:1–18; 3:1–3. Almost all scholars have agreed that in view of the degree of close verbal resemblance the relationship must be a literary one. The view that Jude is dependent on 2 Peter was once common, but in the last half-century has received almost no support from scholars. A few recent writers have postulated a common source used by Jude and 2 Peter, but by far the most widely accepted view is that 2 Peter is dependent on Jude. A strong reason to prefer this view is that while much of the content and some of the words of Jude 4–19 reappear in 2 Peter, Jude's elaborate midrashic structure and exegetical techniques do not. It is much more difficult to imagine Jude constructing his complex midrash from the material in 2 Peter than to imagine the author of 2 Peter discarding the midrashic features of Jude's work as he reused some of the material for other purposes.

It has sometimes been claimed that Jude shows acquaintance with the Pauline literature, but the terminology Jude shares with Paul is really no more than the common vocabulary of the early Church.

C. Theological Character

In much recent scholarship Jude has been placed, along with other "late" NT writings, under the general umbrella of "early Catholicism." In part, this is a result of associating Jude closely with 2 Peter, which is generally classified as "early Catholic." However, it is a mistake to suppose that because material from Jude has been taken over by 2 Peter, the context and character of the two letters are similar. Careful redaction-critical study of 2 Peter's use of Jude shows that the author has adapted the material he borrowed from Jude for a different context and a different purpose.

Jude's language about "the faith" in vv 3 and 20 also contributes to the judgment that the work is "early Catholic." Jude is supposed to view the Christian message as a fixed body of credal belief which is authoritatively transmitted from the apostolic age. However, the objective use of *pistis* ("faith") to mean "what is believed" can be paralleled in Paul (Gal 1:23), where it refers simply to the gospel. The notion of a body of orthodox doctrine needs no more to be read into Jude's use of the term than it does into Paul's. The concept of tradition in Jude 3 can also be amply paralleled in Paul, who frequently refers his readers back to the traditions he delivered to them when he founded their churches as an unalterable standard of Christian truth (e.g. 1 Cor 11:2, 23; 15:3; 2 Cor 11:4; Gal 1:8–9).

Two further features, in addition to the development of fixed credal orthodoxy, which are usually considered characteristic of "early Catholicism" are the fading of the imminent eschatological expectation and the growth of institutionalized office in the Church. In Jude, however, the Parousia hope is lively and pervades the letter (vv 1, 14, 21, 24). The whole argument of the midrash (vv 4–19) hinges on the expectation that Jude's opponents are to be judged by the Lord at his Parousia and so presupposes an imminent Parousia. As for ecclesiastical officials, they are not so much as mentioned in Jude. Jude's opponents were evidently charismatics who claimed prophetic revelations, but his response is not the "early Catholic" one of restricting charismatic activity to ecclesiastical officials or subjecting it to their control. He addresses not officials but the whole community, who all enjoy the inspiration of the Spirit in charismatic prayer (v 20) and are all responsible for upholding the gospel (v 3). The usefulness of the general concept of "early Catholicism" is in any case beginning to be seriously questioned, but it should at least be quite clear that it is inapplicable to Jude.

The evidence points rather to Palestinian apocalyptic Jewish Christianity as the milieu to which Jude belongs. We have seen (in section A) that the midrash section (vv 4–19) shows the author to be an accomplished practitioner of Jewish exegesis of a kind which can be most closely paralleled in the Qumran literature and is not typical of the literature of Diaspora Judaism. His use of the Enoch literature and the apocryphal account of the death of Moses point in the same direction, as does his dependence on the Hebrew Bible (see section B above).

D. The Opponents

The opponents against whom Jude warns his readers have usually been thought to be gnostics. Few modern scholars are willing to identify them with a specific gnostic sect, and many speak cautiously only of "incipient Gnosticism," such as may also be characteristic of Paul's opponents in Corinth or the Nicolaitans in Revelation. However, secure exegetical evidence for specifically gnostic teachings cannot be found in Jude. His polemic seems entirely aimed against the opponents' practice and advocacy of immorality: they must, therefore, have been people who were *in principle* libertines. Their immorality must have been real, not a polemical slur, since it is the sole reason for Jude's attack on them. He is not casting aspersions on the morality of people he really disagrees with for other reasons. Everything he says about them can be directly related to their antinomianism. This antinomianism could have been one of the streams which flowed into later Gnosticism, but it is not itself distinctively gnostic.

The opponents were evidently itinerant charismatics who had arrived in the church or churches to which Jude writes. They reject all moral authority, whether that of the law of Moses (vv 8–10) or that of Christ himself (vv 4, 8). Their denial of Christ as Master and Lord (v 4) is not to be understood as a doctrinal error, but as rejection of his moral demands: by their immoral practice they in effect disown him as Master and repudiate his authority as Lord. Evidently they understood the grace of God in Christ (v 4) as a deliverance from all external moral constraint, so that the man who possesses the Spirit (v 19 is Jude's response to this claim) becomes the only judge of his own actions, subject to no other authority. Like the Corinthians, whose slogan was "All things are lawful for me" (1 Cor 6:12; 10:23), they take Christian freedom to mean that the really

spiritual person is free from the constraints of conventional morality. In their indulgence in sexual misconduct (vv 6–8, 10), they may have been deliberately flouting accepted standards of Jewish morality and conforming to the greater permissiveness of pagan society. For their authority to behave in this way, they appealed to their charismatic inspiration, manifested in prophetic visions ("dreaming," v 8, is a pejorative reference to these), in which perhaps they received revelations of the heavenly world and their own exalted status in it.

The most puzzling feature of the opponents, their attitude to angels (vv 8–10), is probably to be understood with reference to angels as guardians of the Law and of the moral order of the world. When accused of sin by the standard of the law of Moses or of the order of creation, they spoke disparagingly of the angels who gave the Law and administered the moral order of the world, alleging that these angels were motivated by ill-will toward humanity. Such an attitude to the angels of the Law does resemble the views of many later gnostics, but it stops far short of the cosmological dualism characteristic of these gnostics, for whom the hostile angels were the creators and lords of the material world.

Jude's opponents were not simply members of the Church, but teachers: vv 11–13 portray them, with appropriate OT types, as people who lead others astray and, notably, as shepherds who feed themselves instead of the flock. They were present at the Church's fellowship meals (v 12), where no doubt they imparted their prophecies and teachings to the Church. They gathered their own faction of followers, who considered themselves truly in possession of the Spirit (v 19).

It is possible, though by no means certain, that Pauline teaching may have had some influence on the opponents. They could have been taking to an extreme and misinterpreting Paul's teaching about grace and the Law. Not only did Paul himself recognize and oppose the danger of an antinomian distortion of his teaching on Christian freedom (Rom 3:8; 6:1, 15; Gal 5:13), but also the blaspheming of angels, so distinctive of Jude's opponents (vv 8–10), is not too distant from some of Paul's treatment of the angels of the Law and "the elemental spirits of the world" (Gal 3:20; 4:3; 8–9; Col 2:8–23; Rom 8:33–39).

E. Date

In the history of scholarship Jude has been assigned to a very wide range of dates, from the 50s to the late 2d century. Recent scholars are not inclined to date the work very far into the 2d century, but many consider a date relatively late in the 1st century to be probable. However, the most important factor in this opinion is the classification of Jude as an "early Catholic" work, which we have already seen to be unjustified (section C above). Nor does the character of the opponents' teaching (see section D above) require a late date, since it is not developed Gnosticism.

A late date has also been deduced from v 17, in which the author is often thought to be looking back on the apostolic age as an era now past. However, this is by no means a necessary understanding of the verse and is probably a mistaken one. It is not the apostles themselves, but their predictions, which belong to the past. As in vv 3 and 5, Jude is recalling his readers to the instruction they received at their conversion, from the apostles who founded their churches. The apocalyptic prophecy of v 17 formed part of the initial Christian teaching which was given to these churches at their foundation. Understood in this way, Jude's statement is parallel to many of Paul's in which he refers his readers back to the teaching he gave them when he established their churches (1 Cor 15:1–3; Gal 1:9; 1 Thess 4:1–2; 2 Thess 2:5), with the one difference that, since Jude is evidently writing to churches he did not found himself, he speaks of the apostles' teaching rather than his own (but cf. Rom 6:7; 16:17). If v 18 ("they said to *you*") means that Jude's readers themselves had heard the apostles' preaching at the time of the founding of their churches, then the passage suggests an earlier rather than a later date for the letter.

If 2 Peter is dependent on Jude (see section B above), then the date of 2 Peter is a *terminus ad quem* for Jude, but scholarly opinions on the date of 2 Peter differ almost as much as do those on the date of Jude. Perhaps all that can be said, in general, is that the letter of Jude gives a general impression of primitiveness and contains nothing that requires a late date. It could very plausibly be dated in the 50s, and might be one of the earliest of the NT writings.

F. Authorship

The letter is attributed to "Judas, a servant of Jesus Christ and brother of James" (v 1). This Judas (traditionally in English "Jude") has usually been identified as Judas the brother of Jesus, who is mentioned in Matt 13:55; Mark 6:3; and Hegesippus (*apud* Euseb. *Hist. Eccl.* 3.19.1–20.6). Other identifications have occasionally been suggested, but are implausible because they do not satisfactorily account for "brother of James." Since for purposes of identification reference would normally be made to one's father, not one's brother, the James in question must have been very well-known. The only man in the early Church who could be called simply James without risk of ambiguity was James the Lord's brother.

However, the question arises whether the letter was really written by Judas the brother of Jesus or is a pseudepigraphal work attributed to Jude by a later writer. There is no scholarly consensus on this point. Against the pseudepigraphal hypothesis, it has sometimes been argued that Jude was too obscure a figure in the early Church for a later writer to adopt him as a pseudonym that would lend authority to his work. Though this may be true of large parts of the early Church, it would not be true of Palestinian Jewish-Christian circles, where the blood relations of Jesus were prominent in the leadership of the churches until well into the 2d century, or in East Syrian Christianity, whose favorite apostle, Judas Thomas, came to be considered the twin brother of Jesus and thereby identified with Judas the brother of Jesus. However, it is unlikely that a pseudepigraphal work from either of these contexts would have described Jude in the way he is identified in v 1. A Syrian writer would certainly have called his pseudonym Judas *Thomas* (or Didymus), as Syrian Christian literature always does. A Jewish-Christian writer would surely have given Jude his common title "brother of the Lord," which, in such circles, would not only distinguish him from other Judases, but would indicate his authorita-

tive status. That this title is not used is much more easily explained if the letter is authentic. Not wishing to claim an authority based on mere blood-relationship to Jesus, Jude avoids calling himself "brother of the Lord," which readers would have taken (especially in a letter opening) as his claim to authority. Instead, he bases his authority to address his readers on his being "a servant of Jesus Christ" (cf. Phil 1:1).

Of Judas the brother of Jesus, we know little. One of the four brothers, probably younger than James (Matt 13:55; Mark 6:3), he was presumably, like the other brothers, not a follower of Jesus during his ministry (Mark 3:21, 31), but became a believer after the resurrection (Acts 1:14). According to 1 Cor 9:5, Jesus' brothers became traveling missionaries, and this general reference probably includes Jude, especially as it most likely does not include James, who seems to have remained in Jerusalem. Jude's missionary labors would most probably be among Jews, but not necessarily in Palestine: he could have gone to the Diaspora. Julius Africanus (*apud* Euseb. *Hist. Eccl.* 1.7.14) says that the family of Jesus spread the gospel throughout Palestine, starting from Nazareth and Cochaba (most likely Kaukab in Galilee, northwest of Sepphoris, rather than Kaukab in Transjordan): this confirms both the missionary role and other indications that the family remained based in Galilee.

The only other possibly reliable information is Hegesippus' story (*apud* Euseb. *Hist. Eccl.*, 3.19.1–20.8) about the grandsons of Jude (whose names are given in another fragment as Zechariah and James). As descendants of David and related to Jesus the Messiah, they were denounced as politically dangerous and brought before the emperor Domitian. But when they explained that they were only poor farmers, working with their own calloused hands, and that the messianic kingdom they expected was heavenly and eschatological, the emperor dismissed them as harmless and ordered the persecution of the Church to stop. Hegesippus adds that they became leaders of the churches and survived until the reign of Trajan. No doubt the story preserves some historical memory, but it has a clearly apologetic thrust in showing that the emperor himself had recognized that Jewish Christianity was not a political danger, while the trial before Domitian himself and especially his ordering persecution to cease as a result are improbable. Thus it would be unwise to trust the chronological implications of the story: that Jude had grandsons who were adult in the reign of Domitian and (even less trustworthy because not stated by Hegesippus) that Jude himself was then dead. But if Jude, as one of the younger brothers of Jesus, were born ca. A.D. 10, he could have had grandsons aged thirty in A.D. 90, when he himself would be eighty. Thus, even if the letter had to be dated fairly late in the 1st century, it could still be an authentic letter of Jude. But, as we have seen (section E), there is no reason to date it so late.

A late dating of Jude is the major reason why many scholars have concluded it must be pseudepigraphal. If we reject that reason, there remains only one obstacle to its authenticity the language of the letter, which has often been said to be Greek too good to be attributable to a Galilean Jew of peasant stock. Although the author was certainly a Semitic speaker who habitually used the OT in Hebrew and probably read the book of Enoch in Aramaic (see section B), his command of literary Greek is quite impressive. However, this should not be exaggerated. A wide vocabulary, which Jude has, is easier to acquire than skills in grammar and style, which are adequate but not remarkable in Jude. The kind of skills he shows (see Bauckham *Jude, 2 Peter* WBC, 6–7) are the rhetorical skills which a Jewish preacher in Greek would need to acquire and which he could acquire from familiarity with Jewish literature in Greek and from much listening to Jewish and Christian sermons. It is not easy to estimate how competent in Greek a Galilean Jew would have been, but in Jude's case, if his missionary career took him among Greek-speaking Jews, there seems no reason why he should not have acquired the degree of competence displayed in this letter.

Finally, it should be noted that the character of the letter—its exegetical methods (section A above), its indebtedness to Palestinian Jewish literature (section B above) and haggadic traditions, its apocalyptic perspective (section C above)—is entirely consistent with authorship by a Palestinian Jewish-Christian leader of the first generation, as Judas the brother of Jesus was. The preservation of this short letter in the NT therefore affords us a rare glimpse into those early Palestinian Christian circles in which Jesus' own blood relations were leaders.

G. Destination

Little can be said about the destination of the letter. The formal opening (vv 1–2) identifies it as a real letter, and, as the specific occasion for writing (v 4: itinerant teachers from elsewhere have been misleading the readers) and the particular characteristics of the opponents (section D above) indicate, it is not a general letter to all Christians, but an occasional letter to a specific church or group of churches. The latter possibility might explain the failure to specify a place in v 1, but specific destinations were sometimes omitted when letters were later copied for the benefit of a wider readership.

Both the identity of the author and the Jewishness of his letter suggest that the recipients would probably be Jewish Christians. On the other hand, although antinomianism was not unknown in 1st-century Judaism, the antinomian teaching of the opponents points most plausibly to a gentile environment (as with the antinomian problems in Paul's Corinth and in the churches of the book of Revelation). Perhaps we should think of a predominantly, but not exclusively, Jewish-Christian community in a gentile environment.

H. Message

In appreciating the message of Jude, it is important to bear in mind the structure explained in section A above. The purpose of the letter, to urge the readers "to carry on the fight for the faith" (v 3), is really only fulfilled in vv 20–23. The exegetical section (vv 4–19) about the false teachers establishes the danger they pose to the readers, while vv 20–23 explain how the readers should respond to this danger, or, more positively, how, in the light of this danger, they are "to carry on the fight for the faith." The danger is antinomianism, the claim that the gospel frees Christians from moral obligation. Such teaching and the

immoral behavior which follows from it incur divine judgment: this point is made by identifying the opponents as the sinners of the last days whose judgment has been predicted all along. The true gospel, on the other hand, which Jude's readers must maintain in the face of antinomian teaching is a gospel with necessary moral implications. It must be lived out in a way of Christian life which Jude summarizes in four injunctions in vv 21–22: (1) the gospel ("your most holy faith") received from the apostles, with its clear moral implications, must be the foundation on which the Christian community is to be built; (2) prayer under the inspiration of the Spirit shows a reliance on God to be distinguished from the prophetic inspiration claimed by the opponents; (3) the readers must maintain their place in God's love by obeying his will; (4) they must live in expectation of the Lord's coming, when he will show mercy to those who remain faithful to him. Thus obedient discipleship leads to eschatological salvation, by contrast with the path of immorality, which is leading the antinomians to eschatological judgment.

Jude's denunciation of the opponents, because of the serious danger they pose to his readers, is accompanied by a genuine pastoral concern not only for those they have led astray but even for the opponents themselves. Although the text of vv 22–23, which advises the readers on how to deal with the opponents and their followers, is uncertain, the general advice is clear: to exercise Christian love, but in connection with great care to avoid the contaminating effect of the opponents' influence.

The doxology (vv 24–25), which has often been admired, depends on liturgical tradition, but is nevertheless framed to conclude the message of the book. It is in effect a confident prayer that God will preserve the readers from the spiritual disaster with which the false teaching threatens them, and bring them to the destiny he intends for them, when they will be presented as perfect sacrifices in his heavenly temple. All the concerns of the letter are finally aimed at this goal: that the Church should be fit to be offered to God's glory.

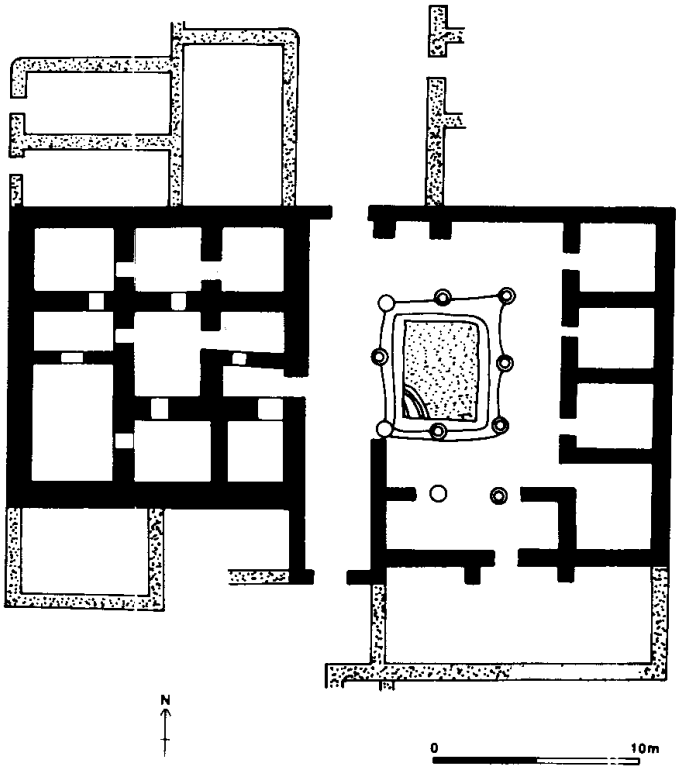
JUDEA (PLACE) [Heb *yĕhûdâ*]. See JUDAH (PLACE).

JUDEA, RIDGE OF. See RIDGE OF JUDEA (PLACE).



JUDEIDEH, TELL (M.R. 141115). An ancient site in the Shephelah, about 2 km N of Beth-govrin, situated 398 m above sea level.

It is generally agreed that the site is to be identified with Moresheth-gath—the birthplace of the prophet Micah (Mic 1:1; Jer 26:18), and was one of the cities captured by Sennacherib in his campaign against Judah in 701 B.C. (Mic 1:14). The book of Micah places Moresheth-gath in the vicinity of Lachish and Mareshah (Mic 1:13–15). Eusebius (*Onomast.* 134.10), Hieronymus, and the Medeba Map locate the site N of Beth-govrin. The city is to be reckoned among those which Rehoboam fortified, if the reading "Moresheth-gath and Mareshah" is accepted for "and Gath and Mareshah" in 2 Chr 11:8.

The ancient settlement was spread over the natural hill, an elongated rectangular area about 580 m long. Excavations have concentrated on the S part of the hill at the site of the walled citadel.

Little was uncovered from the Bronze Age, apart from a few graves. From the scanty material published in the excavators' report (Bliss and Macalister 1902), it is difficult to assign exact dates to this material. The excavators were of the opinion that the site was abandoned at the end of the Bronze Age and remained unoccupied until the end of the Judean kingdom.

Three main periods are distinguishable in the Iron Age: (1) Pre-Israelite (i.e., Canaanite); (2) Jewish (Israelite II); and (3) Hellenistic-Roman. In the vicinity of the mound, graves belonging to the Iron Age and the Roman period

JUD.01. Plan of military headquarters at Tell Judeideh, Herodian Period. *(Redrawn from* EAEHL *3: 695)*

were found. From the Iron Age II, 37 handles stamped with *lmlk* seals were discovered. The handles include the two- and four-winged types as well as reference to the four cities (Ziph, Hebron, Socoh, *mmšt*). Building remains were also found.

The main finds belong to the Roman period. In the Early Roman period, there was a military enclosure on the S part of the hill. The enclosure was surrounded by a wall which had four double-winged gates flanked by square internal towers. The main streets passed through the gates and crossed at right angles in the center of the enclosure in a manner typical of military camps. The headquarters in the center consisted of two buildings. The W building was square and had eight rooms arranged around a courtyard. The E building was Hellenistic in plan with rooms arranged around an enclosed courtyard, having a peristyle of eight columns and a pool in the center. See Fig. JUD.01. Nothing was found in the buildings to indicate their dates, but on the basis of their style the buildings should be assigned to the time of the Herodian dynasty.

JUDGE, JUDGING.

The OT uses several different terms to express the idea of "judge" or "judging." These occur both as nouns and as verbs.

A. The Noun "Judge"
1. The Root *Špṭ* in Akkadian Literature
2. The *Šāpiṭum,* "Judge," in Extrabiblical Literature
3. The Usage of the Root *Špṭ* in the OT
4. The Role of the *Šôpēṭ* in the OT
5. The Usage of *Dyn* in Extrabiblical Literature
6. The Root *Dyn* in the OT
7. Others Who Judged in Israel
B. Judging (Verb)
C. Judging and Ruling
1. Synonyms
2. God Judges the Whole Earth

A. The Noun "Judge"

Although the roots *špṭ* and *dyn* are often used in parallel in the OT and in the literature of the ANE, there is evidence suggesting that originally they were not synonymous in meaning. The *šôṭēṭ,* unlike the *dayyān,* was an undifferentiated executive appointed to play several administrative roles which included deciding cases. The translation of *šôpēṭ* to mean "undifferentiated executive" is comprehensive and more apt than "judge" (*CMHE* 219 no. 3).

1. The Root *Špṭ* in Akkadian Literature. In Akkadian there are two homonymous roots: *špṭ* I and *špṭ* II. *Špṭ* I is often used in parallel with *dyn* when used in connection with legal matters. *Špṭ* II, on the other hand, means "to threaten" or "to warn." It is significant that when it refers to "threat," or "warning," *špṭ* appears only in the OB period as attested in the Mari texts. The substantive *šāpiṭum,* "judge," is not attested until after the OB period (ca. 2000–1600 B.C.). This strongly suggests that the agent *šāpiṭum* was originally West Semitic and was introduced into the Akkadian language and administrative system by the Amorites. Prior to their arrival, the title for "judge" was *dayyānu(m),* an official who decided cases like a modern law-court judge or magistrate. This fact is supported by the fact that the root *dyn* is used forensically in all Semitic languages. While the *dayyānu(m),* "law-court judge," only decided cases which the litigants brought to him, the *šāpiṭum,* "judge," as an undifferentiated executive, performed many other functions which included deciding cases of litigants under his jurisdiction.

2. The *Šāpiṭum,* "Judge," in Extrabiblical Literature. In the Mari documents, the agent *šāpiṭum* was a person whom the king *(šarrum)* appointed to perform some special tasks. His authority was delegated to him in order that he might assist in the administration of a territory or in conducting military campaigns (cf. *ARM* 1, 73: 45–53). The functions of the *šāpiṭum* included that of "arbitrating" in domestic affairs of litigants within his jurisdiction (*ARM* 8, 84: 1–10). He was also appointed by the *šarrum* to act as a territorial governor (cf. Kupper 1957; *ARM* 2, 98: 7–14).

3. The Usage of the Root *Špṭ* in the OT. The term *šôpēṭ* is a participle of the verb *šōpaṭ* which, because it is multifarious in meaning, is translated "decide," "judge," "rule," "govern," "vindicate," "deliver," etc. In the English versions of the Bible, it is uniformly and erroneously translated "judge." This universal rendering of *šāpaṭ* is very unfortunate because it conceals other meanings which elucidate the appointment and function of the *šôpēṭ* in

Israel. Whereas the root *dyn* occurs only 25 times, the root *špṭ* is attested in 180 references in the *Qal*. To distinguish between *dyn* and *špṭ* as used in the OT, close attention should be paid to their contexts. Extrabiblical literatures, which are older than the OT, should also be consulted to elucidate the original usage and to realize the changes which may have taken place in the usage of *špṭ* diachronically. The fact that among the Semitic people *dyn* is overwhelmingly used in legal documents and in reports of legal decisions suggests that it was the original forensic term denoting "to judge." It is also significant that when the root *špṭ* is used with *bên . . . ûbên,* ("between . . .") it generally refers to the restoration of *šālôm* which prevailed prior to the prevailing strife or dispute (Gen 16:5; Judg 16:27).

4. The Role of the *Šôpēṭ* in the OT. The substantive *šôpēṭ* is used with reference to both God and humans. This is similar to the usage of *šāpiṭum* in Akkadian literature. Just as the *šāpiṭum* exercised authority delegated to him by the *šarrum* or by the deity, similarly the *šôpēṭ* of the book of Judges exercised authority delegated to him by Yahweh, the *šôpēṭ kol hāʾāreṣ,* "the Judge of all the earth," (Gen 18:25). That one was chosen by God to function as *šôpēṭ* was signified by the spirit of God which descended upon that person (Judg 2:16; 3:9, etc.). Yahweh had the authority to appoint and depose a *šôpēṭ,* "judge" (cf. Ps 82:1–8). The role of Yahweh as *šôpēṭ par excellence* compares to that of the Canaanite patron deity 'El who appointed the gods Baʿl, Yamm, and Mot to function as judges, under his authority (cf. *CTA* 6.VI.28–29).

The main task for which the judges were appointed was to maintain harmonious relations among the Israelites. The judge made legal decisions in civil disputes (Judg 4:5; 1 Sam 7:15; cf. 2 Sam 15:4). Most of the disputes which related to the *šôpēṭ* were those which concerned the welfare of the poor, the widow, the orphan, and the stranger (Psalm 82; Jer 5:28–29; 22:15; Deut 1:16–17, etc.). In this function the judges did not always pass a verdict which justified the plaintiff and condemned the defendant. The judges often acted as arbitrators, i.e., restorers of *šālôm* which prevailed before the onset of strife or hostilities (Gen 16:5; 19:9; Judg 11:27). For this reason, if those who were wronged failed to acquire justice from human judges, they summoned Yahweh, the Judge preeminent, to intervene (Ps 6:7–9; Ps 82:8). Because Yahweh was considered righteous in all his judgments, an innocent person who felt he had been judged unjustly directly appealed to Yahweh to judge (*špṭ*) him, that is, "to deliver," "to vindicate," or "to reward" him according to God's criterion of retribution (Ps 26:1; cf. Judg 11:27). The root *špṭ* in both Akkadian and Hebrew usage also referred to the "administering," "ruling," or "governing" of a territory. This is the general meaning of *špṭ* in the book of Judges (Judg 3:10; 4:4; 1 Sam 7:6; cf. *ARM* 1, 73: 45–53).

In the Akkadian texts of Mari, apart from governing a territory, a *šāpiṭum,* "judge," also commanded armies against enemies of the king (*ARM* 2, 98: 7–14). This compares very closely to the roles played by the judges in premonarchical Israel: they led armies and delivered the Israelites from their oppressors and enemies, e.g., Judg 1:16, "The Lord raised up judges, who saved them . . ."; Judg 3:10, ". . . he judged Israel; he went out to war." In this usage, the term *špṭ* refers to "delivering" or "saving," (Heb *yšʿ*).

5. The Usage of *Dyn* in Extrabiblical Literature. The root generally used in legal decision-making in Semitic languages is *dyn.* This is evidenced in the Akkadian texts, e.g., the Code of Hammurabi in which the legal term for making a decision or judgment on a case is *dyn,* "to judge" in a forensic sense (*AHW* p. 171). The term *dyn* is also found in Arabic, Aramaic, and Syriac bearing the same legal meanings. Thus in Akkadian the term *dînum* refers to the verdict passed by the *dayyānu(m),* "law-court judge," or by the *šāpiṭu(m),* "judge," i.e., "undifferentiated executive" (cf. *ARM* 8, 83 and 87). In Ugaritic, on the other hand, the root *dyn* is used in parallel with *tpṭ,* e.g., *ydn dn ʾlmnt, ytpṭ tpṭ ytm,* "He [Dan'il] judged the cases of the widow, he presided over the orphans' lawsuits" (*CTA* 17.V.6–8 cf. *CTA* 16.IV.45–47). The Ugaritic usage compares to Hebrew where *špṭ* and *dyn* are also used in parallel (Ps 9:5; Isa 3:13–14; Jer 5:28). This wide usage indicates that the root has a very long history.

6. The Root *Dyn* in the OT. The usage of the root *dyn* in the OT is similar to its use in Ugaritic texts. In both literatures, the roots *dyn* and *špṭ* are used in parallel in a way which suggests close similarity in meaning, though not necessarily implying synonymy. The root *dyn* is sparsely used in Hebrew and Aramaic and only accounts for twenty-five occurrences. Besides 2 Sam 19:10—Eng 19:9 where the root *dyn* is in the *Nipʿal* form, all other usages are in the *Qal* form. The substantive *dyn* is attested in twenty-four references which generally bear the meaning "judgment" in a juridical sense. In Prov 22:10, the root *dyn* in the term *mādôn,* "strife," appears in parallel use with *qālôn,* "abuse." In this reference, *dyn* has lost its juridical meaning and may be translated "quarreling" (cf. 2 Sam 19:10—Eng 19:9; Eccl 6:10).

7. Others Who Judged in Israel. As Judge *par excellence* and king (Jer 21:12; 22:16; Ps 72:2; Prov 31:5, 8, 9) God appointed human judges who deputized for him in the administration of justice. In many ancient communities, advanced age was a status position, which symbolized one's authority reflected in his wisdom based on his experience with life. Thus a tribal leader (Gen 49:16), or a high priest (Zech 3:7) or one who achieved the status of leadership by virtue of military valor, e.g., a premonarchical judge, was expected also to decide cases as a judge. Similarly, by virtue of his position, the king was expected to judge *(špṭ),* i.e., dispense justice *(mišpāṭ)* by protecting the poor, the widow, the orphan, and the stranger against exploitation by the rich or the strong. Thus the phrase *ʿāsāh mišpāṭ ûṣĕdāqāh,* "to execute justice and righteousness," refers to the maintenance or restoration of justice and equity among the citizens of his state.

B. Judging (Verb)

In the OT as well as in the ANE in general, the root *špṭ* referred both to the judging of the people and to the ruling or governing of a territory. Because it is multifarious in meaning the root *špṭ* can only be translated correctly by paying close attention to the context in which it is used. Thus in Zech 7:9 *špṭ* can best be translated "to render judgment" or "to condemn" (Ezek 23:45). In Deut 1:16–17, *mišpāṭ* refers to "deciding a case" but in 1 Kgs 7:7 it

means "the place of judgment." At Mari, the *šāpiṭum,* as ruler of a territory, also acted as a judge who settled disputes in the area of his jurisdiction. Similarly, in premonarchical Israel, the *šôpēṭ* decided cases just like the *dayyānu(m)* of the ANE. A king also acted as a judge (cf. 2 Sam 8:15). Because to rule or govern a territory also implied maintaining peace by preventing situations which disturbed *šālôm,* it is from the root *špṭ* that the terms for judging and ruling are derived. In several other contexts, the Hebrew term *mišpāṭ* refers to "judgment," "custom," "right," and "statute." When the term *mišpāṭ* is used with *ʿāsāh,* it is best rendered by the meaning "to execute judgment/justice" (Ezek 39:21). In Amos 5:24 and Mic 6:8 *mišpāṭ* means "justice." The term *šĕpāṭîm,* which always appears in the plural, as well as *šĕpôṭ* (2 Chr 20:9 and Ezek 23:10), is rendered by the meaning "acts of judgment." When used with *ʿāsāh, šĕpāṭîm,* it refers to the infliction of punishment (Exod 12:12; Num 33:4; Ezek 5:10, *passim*).

In the OT the root *dyn* is not widely attested even though its parallel usage suggests that it was used as a synonym of *špṭ.* In some contexts, the root *dyn,* like *špṭ,* also bears the meaning "to govern" or "to judge." While *mišpāṭ* refers to justice as the rendering of judgment, the Heb term *dîn* refers solely to "decision" or "judgment" in a juridical sense.

Since peace was the main concern of justice in Israel, there are other terms which, according to the context, can be best translated "judgment"; e.g., in the RSV *taʿam* (Ps 119:66) is translated "taste," "judgment," as referring to discernment granted by Yahweh. The other term, *pāqad ʿal,* "to visit upon," strictly means "to punish," i.e., "to execute judgment." In several contexts the Hebrew verb *rîb* is to be rendered "to contend," "to strive" (Judg 11:25; 1 Sam 25:29). There are some words which seem to be derived from the root *dyn,* which are uncertain in meaning, e.g., *šaldîn* in Job 19:29; (Pope *Job* AB, 147–48).

C. Judging and Ruling

The Mari texts evince that judging and ruling could be performed by the same person, the *šāpiṭum.* The *šāpiṭum* was appointed to administer a territory in the absence of the *šarrum* (cf. Kupper 1957: 581; *"Baḫdin-Lim . . ."*). He was also appointed as a commander during a military campaign (cf. *ARM* 1, 73: 45–53). Because of his prominent position in the community the *šāpiṭum* also judged the people in their domestic quarrels (*ARM* 8, 84: 1–11). In the Ugaritic literature, Dan'il as king was also expected to judge or administer justice for defenseless people such as the widow, the orphan, and the sojourner (*CTA* 16.IV.45–54). The OT shows that the premonarchical rulers (*šôpĕṭîm*) conducted military campaigns (Judg 2:16; 3:10), governed the state (Judg 10:3; 12:7), and also administered justice (Judg 4:4). The root *špṭ* is therefore multifarious in meaning in both the Akkadian and the OT. The best meaning of the term in every usage is determined only by paying close attention to the context in which *špṭ* is used.

In the OT, which is written primarily for teaching the way of the Lord to the people of Israel, the term *špṭ* ("to judge") was not used forensically in the administration of civil law. Judging was a divine role delegated by Yahweh himself to those he anointed to become leaders in politics as well as to those he appointed judges in judicial affairs. Judges were therefore strictly required to judge impartially irrespective of the statuses of the litigants (Exod 23:26; Deut 1:16–17). To maintain pure justice in settling disputes, the judges were admonished not to accept bribes because bribes blind the eyes of judges (Deut 23:2–3; Isa 1:23; 5:23; 10:1; Amos 5 12; 6:12; Mic 3:11; 7:3; Prov 6:19; 12:17; 18:15).

1. Synonyms. The term *šāpaṭ* is synonymous with *dyn* particularly in its wider meaning of "judging" or "the administration of justice." Though *dyn* is sparsely used in the OT, its synonymity with *špṭ* is indicated by their parallel use. At all events, *dyn,* as attested in extrabiblical literature, was the term used in legal decision-making processes. Only the context in which *dyn* is used will determine its best nuance. In Jer 21:12, for lack of the most appropriate word, the RSV has correctly rendered *dinû . . . mišpāṭ* as "Execute . . . justice." That *dyn* is used forensically is elucidated by the context which shows that the oppressed person wants justice because he has been robbed by wicked people whom, apparently, he knew. Similarly, in Jer 22:16 the fact that *dān* and *dîn* are used in connection with the needy and the poor, people who were defenseless (cf. Ps 72:2; Prov 20:8; 31:5–9), implies that the root *dyn* is used in connection with the execution of justice. The root *špṭ,* though used synonymously with *dyn,* is normally a special term which implies righteousness and holiness on the part of the people who judge (*šṭ*). Because Yahweh was originally regarded as the sole judge of the whole world (Gen 8:25), *špṭ* as well as its derivative *mšpṭ* implies a morally good character on the part of those who judge (*špṭ*). In general, however, the root *dyn* should be rendered synonymously with *špṭ,* particularly when it is used in the OT without contextual hints. The substantive *dîn* could therefore refer to "justice" and "legal rights" whereas the verbal form referred to "judging," that is "rendering justice [to]."

2. God Judges the Whole Earth. In the OT Yahweh is regarded as the just Judge of the whole world—an attribute which is also affirmed of Shamash in Mesopotamia. According to Ecclesiastes and Job and from the complaint of the prophets, for example, Jeremiah, the justice of God's judgment was not always clear. From the experience of those who were unjustly treated by the wicked, people realized that God either delayed to act or even deceived them (Jer 20:17). For this reason those wronged by evil people had to demand God's hearing or judgment (Ps 17:12; 26:1–12; 43:1, etc.). Because, as Creator of the world, God is universal, it is he who judges the nations with justice, requiting every person justly (Gen 15:14; 1 Sam 2:10; Ps 76:89; 110:6).

TEMBA L. J. MAFICO

JUDGES, BOOK OF. The seventh book of the Hebrew Bible and second book of the Former Prophets in the Jewish canon of Scripture adopted by the early Christian church as the OT. Judges is a collection of stories about persons and events of the premonarchy period in ancient Israel, arranged to present an edifying history of the period extending from the death of Joshua to the establishment of monarchy as told in 1 Samuel. The historiography of Judges is essentially religious, displaying various qualities of leadership along with problematics of Yahwist peoplehood, when "there was no king in Israel," and each one "did what was right, as he saw it" (17:6; 21:25). The title "Judges" reflects a public activity and/or office of the leaders, especially in times of hardship and oppression, about whom the stories were told. The authority of the leaders is dependent upon Yahweh, whose role as divine warrior is subordinated to his role as divine judge (11:27) and subject to the general duty of law, whether local or international, to conform with standards of justice (Good 1985: 399).

4. Levitical Sponsorship? Dtn, Dtr 1, Dtr 2

A. Outline of Judges

The present book of Judges is composed of three parts. The first is an introduction summarizing the Conquest and the final settlement in Canaan (Judg 1:1–3:6). The second part is the history of the judges proper (3:7–15:20), which is itself composed of two subsections: one treating an initial phase of judges' activities (Othniel, Ehud, Deborah and Barak, and Gideon, culminating in the account of two "minor" judges; 10:1–5); and the other treating a subsequent phase of judges' activities, beginning with 10:6–16, and then reviewing the exploits of Jephthah, three "minor" judges, and finally Samson (ending in 15:1–20). The third part is a series of supplementary stories, including another story about Samson (chap. 16), about Micah's shrine and Micah's Levite (chaps. 17–18), and about the rape and murder of a Levite's concubine (chap. 19) and the civil war that followed (chaps. 20–21).

B. Context and Canonical Form

1. A Persistent Problematic. The book of Judges, which presupposes and continues the story line that began in the book of Exodus and came to a climax in the book of Joshua, deals with a fundamental problematic of biblical religion; that of living a life of faithful obedience to the expressed will of Yahweh. Exodus recounts how Yahweh liberated a group of state slaves in Egypt and reconstituted them by covenant in the Sinai wilderness to be his own special possession governed directly by Yahweh through the mediation of Moses. After a generation of moving about Sinai and S Transjordan (Numbers), and a renewal of the covenant in Moab (Deuteronomy), the book of Joshua tells of Israel's entry and settlement in Canaan. The book of Joshua ends with yet another renewal of covenant, this time at Shechem, and with the notice of Joshua's death.

In picking up the story at this point, the book of Judges must deal with a pair of implicit questions: (1) How will reconstituted Israel now conduct its affairs as the people of Yahweh settled in their God-given home? and (2) How will Israel be governed now that there is no Moses or Joshua to exercise leadership?

It is a curious fact that those who are remembered as leaders in the book of Judges are rarely mentioned elsewhere in the Hebrew Bible. Apart from a doublet (cf. Judg 1:11–15 and Josh 15:13–19) and a brief genealogical interest in Othniel (1 Chr 4:13) and Ehud (1 Chr 7:10; 8:6), the list of echoes is limited to Jerubbaal (Gideon) in 1 Sam 12:11 (cf. 2 Sam 11:21), Jephthah in 1 Sam 12:11, Bedan (Abdon?) in 1 Sam 12:11, and Jair (where interest centers, however, in Jair's villages: Num 32:41; Deut 3:14; Josh 13:30; 1 Kgs 4:13; 1 Chr 2:22–23). The prophet-kingmaker Samuel at the outset of the following era was also remembered as the last of the judges (1 Sam 7:15–8:3), but the memory was rarely evoked.

The opposition in the era gets nearly equal attention elsewhere: Sisera (1 Sam 13:9) together with Jabin (Ps 83:9), Zeba and Zalmunnah (Ps 83:11, cf. "day of Midian" in Isa 9:4 and defeat of Midian at Oreb in Isa 8:1–3). Also see reference to the demise of Abimelech (2 Sam 11:21).

In a pair of deuterocanonical and NT writings (Sir 46:11–12 and Heb 11:32) the interest is entirely on the leaders, praised as a group in the former, and with names specified in the latter (Gideon, Barak, Samson, Jephthah—in that "uncanonical" order). That the list in Heb 11:32 is out of phase with the canonical book and mentions only half of the Deborah-Barak team combines with other indicators of theological perspective to suggest that rhetorical and didactic-ethical concerns outweighed strict chronological sequence (if it was accurately remembered) in the organization of the book of Judges.

2. Stories in Didactic Editorial Framework. a. The Outer Framework. The canonical book is framed by a question-and-answer repeated from chap. 1, and a generalization echoing throughout the final chapters. At the outset, sometime after the death of Joshua, the Israelites make inquiry: "Who shall go up first for us to do battle" against the Canaanites? Whether the anticipated warfare is, from Israel's side, offensive or defensive as sequel to Joshua is unclear. In any case, the oracle answers: "Judah shall go up" (1:1–2). After initial successes in the S (1:3–19) qualified by corrective notices about Caleb at Hebron (1:20), Jebusites in Jerusalem (1:21), and Joseph's takeover of Bethel in the near N (1:22–26), the progress of land settlement deteriorates so that by the end of the chapter Israel is in nearly disastrous straits. The beginning of chap. 2 finds "all the Israelites" at Bochim (= Bethel?) weeping (Heb *bōkîm*) before Yahweh, in response to which the oracle brings bad news: because of Israel's covenant breaking, Yahweh will no longer evict Canaanites (2:1–5).

Late in the judges era, after recounting a civil war that would have obliterated Benjamin (chap. 20), except for a punitive raid on Jabesh-gilead and the premeditated abduction of women at a Shiloh vintage festival (chap. 21),

the book concludes with a sweeping but ambiguous generalization providing a rationale for monarchy: "In those days there was no king in Israel; every man did what was right, as he saw it" (21:25). Out of context that statement might describe either a bad scene (anarchy) or a good one (governance by internalized ethic).

The same generalization and the same question-and-answer have already occurred in close proximity (but in reverse sequence) in the concluding chapters (chaps. 17–20). Here, however, Israel would be mobilized for civil, not offensive or defensive, warfare. The stage is set by two stories in chap. 17, concerning a northerner, Micah an Ephraimite. In the first story Micah acquires a molten image for divinatory purposes (17:1–5), and in the second hires a young Levite from Bethlehem in Judah to be his priest and thus secure Yahweh's favor (17:7–13). As connective between stories we read the identical statement (17:6) with which the book ends: "In those days . . . no king . . ." Here the cliché unquestionably describes a bad scene, where the target of polemic is a N sanctuary, and not "all Israel." In the body of the book "all Israel" is in fact mentioned explicitly only once (8:27), specifically as "playing the harlot" with Gideon's ephod (another divinatory object).

The stories of Micah's free-lance N establishment are in turn followed by a grim account of conquest at Dan, where Micah's Levite (hired out from under Micah) founds a priestly house tracing descent from Moses (18:30), "throughout the period that the House of God was at Shiloh" (18:31).

Juxtaposed with these stories about the corrupting exploitation of a young Levite from the S is the account in chap. 19 of a well-established Levite from the N who journeys S to Bethlehem to reclaim his runaway concubine-wife. Despite his own implication in permitting the subsequent rape and murder of the woman, at Gibeah in Benjamin en route home, this Levite as self-designated leader rallies the Israelite militia for private vengeance. With the forces mustered and ready at Mizpah, we hear the same questions as at the outset of the era: "Who shall go up first for us?" And the same oracular answer: "Judah will go first" (20:18). But there would be two resounding defeats before the Israelites inquire, at last, at Bethel (where the ark of the covenant was then to be found), and receive a reliable oracle (20:26)!

From this description of the outer framework it should be clear that the book of Judges displays a clash of perspectives and tensions within its organization which are deeply rooted in the different histories of northern and southern, eastern and western constituencies of Israel from very early times. The storytellers and redactors thus reflect the tug of competing loyalties to various sanctuary sites and the teaching of their personnel, down the years.

b. Introduction (1:1–3:6). The book's introduction is complex. All of 1:1–2:5, as described above, is prologue, summary recapitulation at the outset of the era following Joshua's death and burial which is now told again (2:6–10 read as past perfect: "Joshua had died . . .") in a text strikingly similar to Josh 24:28–31, but with the sequence appropriately revised for introduction to the new era.

The next segment (2:11–23) sets forth the pattern of the period, beginning with a formula that regularly introduces each of the "savior" judges: "Israelites did what was evil in Yahweh's sight" (2:11; 3:2; 4:1; 6:1; 10:6; 13:1), "they prostrated themselves to other gods," the Baals and the Ashtaroth. Such behavior was followed invariably by the victory of oppressors, as Yahweh had promised (2:11–15). It was, equally, an era which also experienced the compassion of Yahweh, who raised up a leader to rescue them. Yahweh was motivated to do so by the sound of their suffering. Yet at the death of the leader, they "turned and behaved more corruptly than their fathers, following other gods," so that at last Yahweh let the enemies remain "without evicting them at once" (2:16–23).

Chap. 3 begins with the ironic explanation that the peoples which Yahweh allowed to remain (Philistines, Canaanites, Sidonians, Hivites, Hittites, Amorites, Perizzites, and Jebusites) were to be there for one purpose: that the future generations of Israelites might have direct experience of warfare and thus be covenantally tested (3:1–4). An ominous side effect, however, was intermarriage and apostasy (3:5–6).

Thus ends the introduction to the era. In the stories which follow, relief at any pressure point, whether from invasion or from resident enclaves within the land, is understood as deliverance for "Israel," no matter how local the threat and the organized resistance. The body of the book is in two parts, as signaled by a special introduction to Jephthah in chap. 11.

c. History with the Judges, Part One. (1) Othniel (3:7–11). The story of Othniel ben Kenaz versus the oppressor Cushan-rishathaim comes first and is most obscure. Othniel's origin is in the S hills around Hebron. Cushan's base was probably Armon-harim ("Hill-country Fortress") not Aram-naharaim (Mesopotamia); the latter would result from a common scribal lapse, with the introduction of word-dividers and spacing in written texts. The story displays the exemplary relationship between a local leader activated to display Yahweh's spirit and a populace petitioning Yahweh for collective relief. "Yahweh's spirit" will only next be mentioned in 6:34. In this example story, "to judge" is to mobilize and successfully lead the people in defensive warfare, which in this case produced "40 years" of pacification, till Othniel died.

(2) Ehud (3:12–30). The second of the savior judges is a left-handed Benjaminite. The name Benjaminite means "son of the right hand [the south]," but there is more than wordplay involved. Left-handedness, considered peculiar and unnatural, was notably frequent in this tribe (see Judg 20:16; and cf. 1 Chr 12:2). The left-handedness may have been artificially induced (binding the right arms of the young children) so as to produce superior warriors. Left-handed persons have a distinct advantage in physical combat, especially in regard to ancient armaments and defenses (Halpern 1988: 40–43). Ehud is activated by Yahweh in response to the Moabite incursion and oppression from field headquarters at the City of Palms (probably the Jericho oasis). Eglon ("young bull") was famed for his obesity, and is slain by Ehud in a single-handed act of diplomatic treachery. Eglon's forces were stampeded and men from the highlands of Mount Ephraim joined in the pursuit. The result was "80 years" of peace.

(3) Shamgar was another single-handed deliverer, versus an entire Philistine brigade (3:31). That he was an

Anathite may point to a hometown Beth-Anath in Galilee. More likely the label identifies Shamgar as a (former?) mercenary, relating his background to a military contingent under tutelage of the fertility/warrior goddess Anath. Defeat of the Philistines was deliverance for the Israelites. No specifically Yahwist claims are made for Shamgar.

(4) Deborah and Barak, that is, "Honey Bee" and "Lightning" (4:1–24) display collaboration of a "judge" (Barak, Heb 11:32) and a prophetess, the wife of Lappidoth (that is, "Flashes"). Deborah's oracular activity and leadership of the militia makes her the heroic one, in a story told at the expense of Barak. Oppression is blamed on "Jabin, king of Canaan," mentioned as such only in the introductory and concluding verses. Verse 17 refers in a flashback to "Jabin, King of Hazor," thus recalling an older treaty which explains the presence of Heber's Kenite clan in the far N and the setting for Heber's wife, Jael. Opposition in the field is headed by Sisera who commands 900 especially sturdy chariots constructed with iron fittings. Sisera's name is non-Semitic, probably of Anatolian origin, as was the knowledge of iron technology. Prodded and accompanied by Deborah, Barak musters forces from Naphtali and Zebulun at a northern Kedesh, and on Mount Tabor, while Sisera's force assembles near Tabor, at the Kishon river. Yahweh confounds the opposition (the narrative does not say how), and Sisera flees N on foot, with Barak in hot pursuit. If the narrative implies that Heber's clan had changed sides (4:17), Jael was an exception. She slays Sisera while he is enjoying her hospitality; and so Deborah's taunting prophecy (4:9) is fulfilled. Barak arrives at the scene too late to take any credit, but returns in time for the celebration.

(5) The Song of Deborah and Barak (5:1–31) is a priceless piece of archaic Hebrew poetry which offers direct access to religion and polity of the Yahwist organization in the late 12th–early 11th centuries B.C.E. In the form of a victory hymn, the song celebrates the theophany of Yahweh as experienced by those who participated at the rout of Sisera's chariotry, thanks to a timely cloudburst and flash flood. For "the stars in their courses" (source of rain?) "fought against Sisera" (5:20).

It was a battle for control of the broad and fertile Esdraelon plain, pegged to the time of Shamgar and Jael (5:6a), spurred on by Israel's successful control of the caravan routes through the highlands of Ephraim and Galilee (5:6b–7), interrupted only by Canaanite control of the intervening plain. In this far older song it is a coalition of "kings of Canaan" whose forces Sisera commands.

While the prose story highlights *dramatis personnae* and mentions only the tribes of Zebulun and Naphtali, the older song calls the tribal roll, for praise or blame as appropriate. Six of the W tribes are variously lauded for responding to the muster: Ephraim, Benjamin, Machir (= W Manasseh?), Zebulun, Issachar, and Naphtali. Two coastal tribes, Asher and Dan, are faulted for what sounds like subservience to Sea Peoples. Two Transjordan constituencies are faulted for staying at home: Reuben and Gilead (= E Manasseh?). Two territorial tribes are treated with silence: Judah and Gad. There is similarly no mention of Levi, which, however, is not surprising in a roster of territorially based units.

Absence of Judah suggests that the events occurred well along in the Philistine period, which rendered Judah totally ineffectual and posed a threat of complete encirclement for the Joseph tribes. Silence concerning Gad in Transjordan most likely reflects one of Moab's incursions into the territory N of its recognized border at the Arnon. Such incursions happened frequently enough that Gad's territory, near the Transjordan escarpment, is known elsewhere in scripture as "plains of Moab."

The song has the highland peasantry pitted against the professional soldiery of the feudal elite from older city-state centers of the plains and the Galilean crossroads at Hazor. After lauding Deborah as a "mother in Israel" (for giving the right oracular answer?), the song turns at last to imagining the scene at Harosheth-haggoim, where Sisera's mother is inquiring anxiously about the tardiness of her son's return, only to be ironically reassured by "the wisest of her captains' ladies" that they are surely enjoying the spoils of war. Verse 31 is a chiastic couplet, quite distinct from the sort of repetitive and seconding patterns that occur throughout the song, and probably represents what Deborah and Barak sang in the prose narrative tradition, prior to incorporation of the archaic victory hymn. Again the land was pacified, for 40 years.

(6) Gideon, that is, "Hacker," gets proportionately far more attention than any other figure in the book (6:1–8:35). He was a savior who nearly became king. The crisis surmounted by this man from the Abiezrite clan of W Manasseh, depradations by Midianites and other easterners at harvesttime, was an annually recurring one, which left the Israelite peasantry desolate after pillaging that ranged as far S as Gaza. These Midianites probably represent a later wave of immigration from E Anatolia (as distinct from the earlier Midianites of Mosaic tradition, most likely also from the N), who brought with them the domesticated camels which made them such effective tax collectors. Description of the Midianite oppressors as Yahweh's response to Israel's relapse (6:1–6) is the most elaborate thus far and will be matched only by the introduction of Jephthah (10:6–9). When the people petition Yahweh for relief, Yahweh sends a prophet, the only one to be mentioned in the book, who brings Yahweh's indictment, a warning for breach of covenant (Heb *rîb*, verbal element in the name Jerubbaal).

Similarly, the stories of Gideon's authentication as leader are without close parallel. A recruiting angel appears in human form to confront Gideon under an oak (sacred tree?) at Ophrah which belongs to his father Joash (note Yahwist name), while Gideon is beating out wheat in a winepress so as to conceal his activity from Midianites in the neighborhood. In the interview which follows, Gideon demands a sign that he is in fact dealing with Yahweh, and is convinced by the sign that he must soon die! Reassured to the contrary by Yahweh, Gideon promptly builds an altar for Yahweh at Ophrah (still there in the narrator's day) and sacrifices a bull upon it, according to Yahweh's instructions. He names the altar: "He Creates Peace/Well-Being" (6:11–24). The socioreligious practice is illustrated by the "Bull site" in Manasseh, an open Iron Age I cult place (Mazar 1982; Kochavi 1985).

Only now does the reason for Gideon's initial reluctance, and his nickname "Hacker," become clear. He is to be a reformer, charged with dismantling his father's Baal-altar

and chopping down the Asherah alongside it. When the townsmen object after the fact, Joash the apostate advises it will be better to let Baal press his own case, thus ironically legitimating the given name of his son, Jerubbaal, "Let Baal Sue" (6:25–32). The reader is thus reminded of Yahweh's indictment brought by a prophet at the beginning of the Gideon stories. This story explains how Judge Hacker, son of the apostate Joash, could properly wear a Baal-name, which occurs with increasing frequency in chaps. 7 and 8.

The remainder of chap. 6 describes the opposing forces: Midianites, Amalekites, and easterners versus the peasants' militia from Manasseh, Asher, Zebulun, and Naphtali, mustered by Gideon, who is now clothed with Yahweh's spirit (6:33–35). But Gideon will hold out for another confirmatory sign. The fleece test, when Yahweh is also able to do it in reverse, convinces Gideon that God has told him the truth (6:36–40).

In chap. 7, "Jerubbaal" (that is, Gideon), according to the text, stations the troops, and Yahweh readies his force by drastically reducing their numbers. Now it is Yahweh who tests the warriors, selecting from the 22 muster units 300 of the less alert, those who incautiously lap at the water like dogs. The initial victory will be Yahweh's alone (7:1–8). With the force thus drastically reduced, Gideon is advised by Yahweh to conduct a nighttime reconnaissance, from which Gideon learns that the outcome of battle is adequately foreseen in the Midianite camp (7:8–15). The 300 men are divided into three units, for a nighttime surprise attack from the camp's perimeter. Each warrior is heavily laden with a trumpet in one hand and a flaming torch inside a heavy ceramic jar in the other. With simultaneous blowing of trumpets and shattering of jars, the opposition is stampeded by the sound and light terror, turning first upon one another and then to disorganized flight. Gideon and the militia had not yet done any fighting, and Yahweh had won, as promised (7:16–22).

Israelites rallied from Naphtali, Asher, and Manasseh give chase. Gideon now sends "envoys" (plural of "angel" in 6:11) throughout all of Mount Ephraim. The tardily mustered Ephraimites capture and execute two Midianite kings, Oreb and Zeeb, bring their amputated heads to Gideon in Transjordan, and voice their indignation at not being summoned at the outset. They are appeased by Gideon's explanation that it was Yahweh's prerogative to give them Oreb and Zeeb (7:23–8:3), for Gideon is on the trail of two others.

The bulk of chap. 8 concerns Gideon in Transjordan. The men of Succoth and Penuel are not persuaded that Gideon's business deserves their provisioning; and Gideon, notably, makes no reference to Yahweh's legitimation. This is Gideon's war; the victory this time will be Gideon's (8:4–9). And so it happens. The two kings Zebah and Zalmunna are taken alive at Karkor and brought to Succoth and Penuel which are, as Gideon had promised, terrorized before the kings are executed. The narrator has withheld until now information that goes a long way toward explaining the caricature of Gideon as savior-judge throughout these chapters. Whereas it was a prime concern of the early Yahwist movement to curtail the vendetta (cf. Deut 32:35 and the institution of cities of refuge), Gideon had taken the Israelite militia into Transjordan in pursuit of blood vengeance. There was also rich booty (8:4–21).

The final narrative segment tells how Gideon, for a good Israelite reason, declined the offer of dynastic rule. He requested instead contributions of the valuables taken as booty, out of which he made an ephod, an elaborate priestly vestment worn (or displayed to be consulted) as having divinatory value. "And all Israel" [its only occurrence in the body of the book] "prostituted themselves there." Still, the land had been pacified for 40 years (8:22–28).

In a few compact editorial verses which make a rough transition (8:29–32), the reader is introduced to the house of Jerubbaal: numerous wives and 70 sons plus Abimelech, whose mother was a slave-wife from Shechem. Finally we read that Gideon died at a ripe old age, to be buried in the tomb of his father. With Gideon dead, the good that he had done was quickly forgotten, along with Yahweh's acts of salvation. Israelites prostituted themselves to a deity called "Baal of the covenant" (alternatively "El of the covenant"), and worshiped at Shechem in the stories which follow.

(7) Abimelech's Career is the organizational midpoint of the book. Archaeological evidence will be assessed below which strongly suggests that the careers of Deborah and Barak were roughly contemporary or slightly later than Abimelech. In any case, considerations of space suggest that the stories in Judges are arranged so as to center rhetorically in the abortive experiment with monarchy at Shechem, where covenant renewal had climaxed the preceding era. In BHS 10 pages are required for chaps. 1–5, 11 pages are given over to Gideon and Abimelech alone (chaps. 6–9), and 20 pages suffice for all that follows (chaps. 10–21).

Unlike the achievements of his father Gideon, which are entertainingly narrated with sustained tension between favorable and unfavorable valuations, Abimelech's story is told by an extremely hostile narrator. The name Abimelech, "My Father is King," is ambiguous, the referent of "Father" being either Gideon or the God of Israel. The name recurs with unparalleled frequency (39 times in 57 verses).

Abimelech's path to power as king of the Shechem city-state, which is reverting to Bronze Age governance in the story, is rapidly recounted: negotiations through his mother's connections with the Shechem elite, appropriation of funds from the Shechem temple in order to hire mercenaries, liquidation of the 70 brothers with the exception of Jotham, the youngest, who hid away, and coronation near a (sacred?) oak at the Shechem fortress (9:1–6).

Jotham's fable addressed to the Shechem elite, telling about the trees who set forth to anoint a king over them but who could only persuade the worthless bramble to accept the office (9:7–15a) is followed by Jotham's statement of readiness to let the rightness of their action be proved or disproved by appropriate blessing or curse (i.e., historical process), whereupon Jotham flees, not to be mentioned again in Scripture outside the chapter (9:15b–21).

In addition to being king at Shechem (never explicitly king "in Israel"), Abimelech also became, like his father, field commander (Heb *śar*) of the Israel militia, for three

years. The split loyalty is presented as his undoing: God sends an evil spirit between Abimelech and the Shechem elite. The mention of "God" in v 23 will be echoed twice in vv 56–57 (the name Yahweh is totally absent), signaling the narrator's theological valuation, which otherwise is left to the tone of the narrative plus Jotham's pronouncement.

Gaal ben Ebed ("Loathsome, son of Slave"), a full-blooded Shechemite, undermines Abimelech's kingship, objecting to Abimelech's half-Shechemite genealogy. The coup is thwarted when Abimelech's appointee as Shechem commandant, Zebul ("Big Shot"), gets wind of the matter and sends word to Abimelech. Gaal is enticed out of the city for open combat and Gaal escapes, but there are many casualties (9:26–41).

Abimelech retaliates for the Shechemite support of Gaal by ambushing and slaughtering Shechem's peasants in the fields, following up the slaughter by seizing the city, razing it, and sowing it with salt, presumably thus laying it under another curse (9:42–45).

Probably v 45 refers only to the poorer quarters of the lower city, as known from excavations. For the next scene has the Shechem elite crowding into the "stronghold of covenant-El's temple." Abimelech's force sets fire to the place and the elite perish in the building's destruction (9:46–49).

There was a similar structure at Thebez called "Strong's Tower," where Abimelech fought his final campaign and died an ignominious death—he drew too close to the structure and "a certain woman" threw down an upper millstone which crushed his skull (9:50–54).

The summary is brief. Seeing that Abimelech was dead, the Israelites "went away, each to his own place" (9:55), a statement adumbrating the disbanding of the militia at the end of the era (21:24). Abimelech had experienced justice, as had the Shechem elite; Jotham's invocation of historical process had been the right word at the right time (9:57).

(8) Two "Minor" Judges follow Abimelech. First, "in order to save [salvage?] Israel" arose Tola ("Worm"?), a man of Issachar who lived (presumably as "resident alien") at Shamir in the hill country of Ephraim. Tola is the first of five who are said to have "judged" Israel, but about whom very little information and no warfare stories survive. Was their activity strictly local? Were they also saviors? Perhaps Tola was thought to have saved Israel by presiding over disputes in such a way that violence was mostly avoided. The list of five is broken open and used to frame the stories about Jephthah, presumably because Jephthah was remembered in both ways: presiding over both internal and external relations, and resorting to military force only when diplomatic recourse was exhausted (see below). Jephthah's name may well have occurred in the same archive as the other five.

With Jair the Gileadite, second in the minor-judge sequence, the center of attention shifts to N Transjordan. The political effectiveness of Jair is represented in genealogical metaphor: he had 30 sons in 30 towns, still called "villages of Jair" at the time of composition and redaction. That Tola judged for "23 years" and Jair for "22 years" (not round numbers) suggests an archival source concerning local or regional administration.

d. History with the Judges, Part Two. (1) Introduction (10:6–16). These verses ironically echo the first introduction (esp. 2:11–3:6), listing all the oppressors of part one, with whose deities Israelites had become entangled, and including Ammonites who will next become the chief oppressors. This time, however, crying out to Yahweh is inadequate. The gods must go. Upon their removal, the plight of Israel becomes intolerable to Yahweh.

(2) Jephthah. His story unfolds with inverted rhetorical relationship to those whose stories are told in part one. Jephthah's family is well-to-do (cf. Gideon) but he is the son of a prostitute, driven out by the sons of his father's wife. His military prowess comes to be certified by activity of a mercenary band which rallies around him at Tob, near the modern border between Syria and Jordan (11:1–3). Ammonite expansion in central Transjordan mounts to the point where Jephthah is summoned by the elders to take charge of the militia as *qāṣîn* (a ranking officer in Joshua's organization, Josh 10:24). Jephthah, however, holds out for highest rank, in covenanting at Mizpah, a Yahwist sanctuary in central Transjordan, location uncertain (11:4–11).

Jephthah first acts vis-à-vis the Ammonites (like Moses before him and prophets after him) as ambassador of Yahweh to earthly courts, in this case a foreign court under the supposed sovereignty of Chemosh, who elsewhere is god of Moab (not Ammon). The dispute is over territory N of the recognized Moabite border at the Arnon, territory with a long history of rival Ammonite/Moabite/Israelite claims. In two embassies Jephthah is presented as making every effort to settle the matter by diplomacy before taking to the field, where Yahweh would be the judge (11:12–28). Only now, in relation to Jephthah's tour to muster the militia, is there reference to Jephthah's manifestation of Yahweh's spirit (11:29). Jephthah seems thus to be presented at the outset of "part 2" as an exemplary leader, apparently the best since Deborah in chaps. 5 and 6.

But Jephthah was not flawless. The sacrifice of Jephthah's daughter in literal fulfillment of a vow (whether hastily worded in reference to livestock or implying a state of desperation before the battle) shows Jephthah and his family marked for tragedy. The cultural background of the women's annual lamentation on the hills, legitimated by the story, remains obscure.

As the next and final Jephthah units show, the tragic dimension of Jephthah's career was not confined to his family. Here there is a brief account of intertribal war, Jephthah's force versus Ephraimites west of the Jordan, precipitated by jealousy of Jephthah's Transjordanian achievements, to which the Ephraimites claim not to have been invited. Negotiations quickly evolve into violence, with heavy Ephraimite casualties (12:1–4), followed by the execution of Ephraimite fugitives at the Jordan crossings, fugitives recognized by a dialect difference: Ephraimites cannot produce the sibilant in "Shibboleth" to the satisfaction of the Gileadite sentries. Jephthah is not mentioned in this final unit, however (12:5–6). The long section closes with a rubric familiar from the "minor judge" list, according to which Jephthah had "judged Israel six years."

(3) Three More "Minor Judges" exercise leadership west of the Jordan river: Ibzan of Bethlehem (most likely in Zebulun) for 7 years, Elon of Aijalon (specifically in Zebulun) for 10 years, and Abdon of Pirathon (in

Ephraim) for 8 years (12:8–15). No warfare stories are told.

(4) Samson ("Little Sun") belongs to a Danite family living in the region flanked by Judah and the Philistine frontier. Concluding formulas in 15:20 and 16:31, familiar from each of the minor-judges and Jephthah materials, are a distinct redactional signal to two blocks of material.

One group of stories (13:1–15:20) explain and display Samson's prodigious strength, recounting the young man's exploits on the western frontier, thus legitimating the claim in 15:20, where "judged Israel" refers to defeated Philistines. There is no indication that in Samson's case it had anything to do with management of intertribal conflict.

In chap. 13, after the notice about the resumption of doing evil and the consequent 40 years of Philistine oppression, Samson's surpassing physical strength is explained as the result of a prenatal agreement between his mother and an angelic ambassador of Yahweh (cf. recruitment of Gideon in chap. 6). The envoy gave her the news that she was bearing a son. The son would be a Nazirite (Num 6:13–21) from birth, who would begin the liberation of Israel from the Philistines; she was to begin at once observing the Nazirite vow. Here the unnamed mother is much quicker to get the message than is the father, Manoah, ponderous head of the house who is presented as something of an isolationist in face of the prolonged Philistine threat.

Chaps. 14 and 15 show Samuel's strength and virility as sadly subversive of the charismatic promise while also legitimating the assertion that he "judged Israel." First there is the eye-catching Philistine woman whom he wheedles his parents into visiting as prospective daughter-in-law, "for she is the right one in my eyes" (14:1–3). This anticipates the formulaic cliché which echoes at the end of the era (17:6; 21:25). En route to Timnah for the parental negotiations, Samson slays a young lion barehanded; and on a subsequent visit he finds the carcass full of bees—and honey. It was widely understood that honey held enlightening and courage-producing potential (1 Sam 14:24–30). Thus it might have been a sign which Samson either failed to recognize or else suppressed by not telling his parents where he found the honey. The story sets the stage for a seven-day wedding feast at Timnah, where Samson propounds a riddle and makes a wager with his "thirty friends" (public functionaries?). They, however, cheat by threatening the bride to extract the answer to the riddle. Their breach of faith brings on Samson a manifestation of Yahweh's spirit, so that the problematic marriage is providentially annulled, but not without the death of 30 other Philistines with whose garments and gear Samson pays his wager obligation. The bride, unbeknownst to Samson, becomes the wife of Samson's best man. The chapter makes it clear that Samson has the requisite physical prowess to be a deliverer; it is lack of civic commitment that will make him a tragic figure.

In chap. 15 Samson returns sometime later to visit his "bride," and is so enraged by the alternative offer of her younger sister that his fury is unleashed (no mention of Yahweh's spirit this time). He captures 300 jackals, ties them tail to tail with a torch between each pair, and turns them loose in fields, vineyards, and orchards. Philistines retaliate by executing the bride and her father, to which Samson responds by smiting Philistines "leg on thigh." Having in effect just announced his retirement, Samson retreats to Judah and hides out in a cave at Etam, location uncertain (15:1–8).

But his retirement was not to last. Philistines deploy themselves against Lehi ("Jawbone") in Judah, demanding Samson's extradition, to which Samson agrees, provided that the Judahites themselves do not try to harm him. As Yahweh's spirit empowers him, Samson promptly breaks free of the new ropes with which he is bound, picks up a donkey jawbone, lays low a whole contingent of Philistines, composes a brief poetic couplet on the subject, and is about to die of thirst when, at last, he addresses Yahweh directly in 15:18, and his prayer is answered. There are clearly etiological elements in the chapter, all subordinate or secondary to the characterization of "Little Sun," of whom it could at last be said that he "judged Israel" (15:9–20).

Chapter 16 adds two stories which underscore the tragic element: first a brief unit about a one-night visit to a prostitute in Gaza (16:1–3), followed by a prolonged love affair with Delilah ("Flirty") of Vineyard Valley (RSV "Valley of Sorek"; Nahal Sarar, which begins about 13 miles SW of Jerusalem, guarded in ancient times by the town of Beth-shemesh). The stories are shaped by tradition's uniform characterization of Samson, but they are not two versions of the same story. It is implied that Judge Samson learned nothing from the near-fatal Gaza escapade, and nearly destroyed Israel as a result of the Delilah affair.

The cutting of the Nazirite's hair was public recognition of release from a vow (which in this case had been made for him) and discharge from active duty (Num 6:13–20). Thus Israel was left for a while without the Nazirite judge during the Philistine crisis. But Samson's hair would grow again, and Samson could voluntarily reenlist, to achieve a momentary settling of accounts with Philistines. Samson is thus presented as a tragicomic figure. While he ran afoul through his lusty self-interest, consequent suffering evoked a new confession, and he died honorably while effecting Yahweh's justice toward Philistine terror. The concluding formula in 16:31 ("He had judged . . ."), repeated from 15:20 but in perfect tense and disjunctive syntax, strongly suggests a second compiler. Chaps. 14 and 15 answer the question: Whatever became of "Little Sun," prodigal son of Manoah? He judged Israel. Chap. 16 answers the question: What became of Judge Samson?

(5) Micah's Place. The S Danite setting of the Samson stories formed a natural bridge to the concluding framework stories described briefly above (B.2). These stories begin in chap. 17, with the blossoming of Micah's religious establishment in the near N (probably early Bethel). Micah ("Who is like Yahweh?") is another prodigal, but one whose doting mother is a sponsor of divinatory equipment for Micah's shrine (17:1–5). In the sequel, Micah employs as his priest a young itinerant Levite from Bethlehem in Judah (17:7–13). The connective hetween stories is the first full statement of the assertion with which the book will end: "In those days, there was no king in Israel. Each one did what was right in his own eyes" (17:6). Here the assertion clearly describes a bad scene; it is S polemic aimed at a N sanctuary.

(6) The Migration of Dan. The polemic intensifies in chap. 18, which begins with a partial echo: "no king in Israel." Here Micah's place is "providentially" deprived of its divinatory equipment and priest, stolen and hired away by the Danites who, because of continued resistance to their settlement along the coast, are moving to the far N. The town of Laish, peaceably isolated, is an unsuspecting sitting duck for the Danites, who promptly rebuild and rename it ("Dan") and install there Micah's image and the young Levite who is at last identified as Jonathan, grandson of Moses! Here ends a S version of the founding of what would become the other infamous northern royal sanctuary, controlled by a rival branch of the Mosaic priesthood throughout the period that the "House of God" (i.e., the legitimate one, with another branch of Mosaic family) was at Shiloh (18:1–31).

(7) The Anonymous Levite and the Gibeah Outrage. Chapter 19 begins with an echo of the anarchy formula "no king in Israel," but in syntactical form that suggests yet another block of preformed narrative to follow. This story too unfolds on the N-S axis, with strongly inverted rhetorical relation to the preceding chaps. 17 and 18. Here it is a prosperous Levite from Ephraim, whose troubles begin when his concubine-wife becomes angry and runs off S to the home of her father at Bethlehem in Judah. When the Levite follows to reclaim her, he is feasted by her father for the better part of a week. Getting a late start for home on the fifth day, they are able to proceed only as far as Gibeah in Benjamin, where once again the Levite enjoys lavish hospitality as a sojourner, but thanks only to another prosperous Ephraimite who is likewise a "resident alien" in Benjamin. In a scene which echoes the story of Lot at Sodom (Genesis 19), protection of the stranger does not here extend to the concubine-wife, who is offered by the Levite to local hooligans who are terrorizing the place. The woman is found by the offended Levite next morning, raped and dead at the door. He transports the body home to Ephraim, carves the corpse into twelve pieces (cf. 1 Sam 11:7 and 1 Kgs 11:30–39) and sends them off to all the tribes with the call to muster. He has in effect set himself up as "judge"—for civil war in pursuit of private vengeance (cf. Gideon in Transjordan, chap. 8). But it will get worse before it gets better.

(8) The "Unholy" War (chap. 20). The warfare against Benjamin, it is specified, involved "all Israel" (20:1) for the first time since a similar specification about the harlotry at Gideon's ephod (8:27). In chaps. 20–21 Israel is distinctively the *qāhāl*, "assembly" (21:5) or *ʿēdâ*, "congregation" (21:10, 13, 16); this is genuinely early usage and not itself a sign of postexilic editing in priestly circles (Anderson 1970; Hurvitz 1972; 1974; Boling 1983). The story perhaps originated in the suppression of a Benjaminite independence movement (Schunk 1963: 69–70). Here the bitterly ironic caricature of institutional life savagely turned toward "national" self-destruction continues. Two calamitous defeats by those who represent "Israel" come on the heels of oracular advice received at W Mizpah, specifying that Judah should go first to battle, as in 1:2. Only upon the third muster and inquiry, at Bethel while the ark of Yahweh's covenant is there, is the oracle reliable and victory achieved. Here, in contrast to 2:1–5 and chapter 17, the attitude toward Bethel is not polemical. The warfare left only 500 survivors hiding out, all males.

(9) Resolution (chap. 21). When at the outset of the final scenes, the people inquire at Bethel to learn why it has come about that one tribe is nearly extinct, the oracle is silent. They are thrown back upon their own devices and conclude that another small civil war will be advisable, to slaughter the men of Jabesh-gilead, who had not rallied against Benjamin (the E-W axis again), and to capture virgins for the 500 Benjaminites. The expeditionary force returns, however, with only 400 women. Another 100 are secured by the Benjaminites, thanks to the reasoning of Israel's elders, who propose a Benjaminite raid on Shiloh at festival time and offer a theologically foolproof rationale. If Shiloh's fathers and brothers come to complain, the elders will be able to say: "We did them a gracious deed. For we [the elders] did not take them; neither did you give in to them." And so it happened in the story. In response to the picture of tragic anarchy leading to the brink of national suicide, the final chapter of Judges draws upon the comic vision: "In those days there was no king in Israel" (except Yahweh, that is); "every man did what was right, as he saw it" (governed by internalized ethic, that is). Lamenting the atrocious behaviors, the book concludes by commending an enduring principle for decision-making in the maintenance of community for the well-being of every family.

C. The Book of Judges in Modern Study

Judges poses many and complicated questions. How to understand the evidence for a process preserving stories over a span of centuries and for editorial activity which reflects historical developments between original event and final telling? What to make of the narrators' and redactors' interest in certain towns and not others as places of assembly and oracular inquiry? How to correlate results of archaeological exploration, and critical study of ancient Israel's social world, with literary criticism? Who were the traditionists who generated the stories and what can be said of their social location down the centuries to the final compilation and redaction?

1. Judges as Narrative Art. The structure of Judges is distinctive, with indications of successive editing throughout introductory and concluding chapters, but much less frequently in the connections between stories that make up the body of the book. Rarely did the redactional activity in the body of the book invade essential contents of narratives. This is in striking contrast to the preceding book, where the model leadership of Joshua is displayed in highly stylized narrative. Thus early Israel's narrative art survives in its purest form in Judges. An appropriate label for such stories is "historical romance," a category better known from the classical world where they appear regularly in one of two genres: ideal and comic. The ideal genre tells of a well-known figure in popular language for popular delight as well as edification. The comic genre is a more sophisticated one, appearing less frequently, and intended for more discriminating attention. Stories that comprise the body of Judges correspond mainly to the "ideal" genre, that is, stories of leaders whose varying Yahwistic effectiveness is evaluated in the telling. The

outer framework gives abundant evidence of the comic vision.

2. Judges as Historiography. The first products of Israelite history-writing do not appear until the 10th century B.C.E., when historiography answered a new need for the Davidic empire's self-understanding. Two major works stem from the Solomonic era and/or its immediate sequel. One is the 'Court History of David" (2 Sam 9:20) or "Succession Document" (if it continues in 1 Kings 1–2). To the same period belongs the essential compilation of old materials that form the epic core of Genesis through Numbers. The main story line of the epic core is identified by the symbol "J," as it represents a version of origins which attained favored status in Jerusalem and Judah and notably uses the divine name Yahweh in stories referring to periods long preceding Moses. Other lexical and stylistic contrasts, as well as theological ones, distinguish the J material from its originally N (Ephraimite) counterpart, committed to writing perhaps a century later, after the split at the death of Solomon. The northern or "E" version prefers the generic noun Elohim and avoids use of the proper name Yahweh until the latter is revealed to Moses in Exodus 3. In general, material in Genesis-Numbers displays a simpler, earthier, livelier account than does E. The latter has its own theological perspective, with concentration upon angelic messengers, miracles, and related concerns. At Sinai, for example, J revels in the splendor of Yahweh's theophany (Exodus 19), while it is E that contributes the revelation of the divine will (Exodus 20), according to most critics. In general we may say that while J was not uncritically supportive of the Davidic establishment, E sought to undergird a Mosaic revival in the north. It is generally agreed that J and E were brought together in the S after the destruction of the N kingdom had shown that Moses and the prophets spoke the truth. Finally the corpus was supplemented and reedited in the 6th century B.C.E. by priests who were in exile in Babylonia.

It is not clear how far the epic core told the story after Moses. After a long interruption by the bulk of Deuteronomy, the JE material resurfaces in Deuteronomy 34, reporting the death and burial of Moses. Attempts to trace the JE story line into Joshua–Judges (see the classic commentaries of Burney [1970] and Moore [*Judges* ICC]) and beyond have met with little agreement among critics. It is often suspected that Judges 1 is J's account of conquest, at last yielding pride of place to an E account (the bulk of Joshua 1–11), but if so the trail then peters out.

More persuasive and productive than the older approach to literary source-strata has been the recent half-century of efforts to reconstruct the origins of stories and archival materials in relation to the various tribal constituencies that comprised Israel in the pre-state period. At the same time a broad consensus has formed around the relation of Joshua–2 Kings to the preceding book of Deuteronomy. The result is a Primary History comprised of (1) the Tetrateuch (Genesis–Numbers), and (2) a Deuteronomic corpus (Deuteronomy–2 Kings) which did not undergo a priestly redaction. The two have been dovetailed together so that the lengthy speeches of Moses (Deuteronomy 1–33) precede the old narrative account of his death and burial.

The core of Deuteronomy (essentially 4:44–27:26) presents itself as the farewell speech of Moses, delivered in the plains of Moab as he presides over renewal of the Sinai covenant, with the people poised for entry into the land of promise. Deuteronomy displays a pattern for the organization and governance of the tribal league, and for the role of Moses thus far as well as prophets in the future, in analogy to forms and practices of international diplomacy. Israel is the Kingdom of Yahweh, formed and ever reformable, thanks to the Sovereign's stipulation of binding basic policy (Decalog) for the development of legal tradition.

With the core of Deuteronomy given a new frame (1st and 3d speeches) to serve as introduction, the books of Joshua–2 Kings follow as the result of a full-scale chronicling project, mainly completed in the period of Judahite revival under King Josiah (ca. 640–609). Deuteronomy is the basis for one of two themes pervading the corpus: ancient covenantal curses account for the demise of the N kingdom. That disaster of 721 B.C.E. only heightened one of Deuteronomy's enduring concerns, to find provision for jobless Levites at the central Yahwist sanctuary (Deut 18:1–8). Provision for such teacher-priests, in turn, presents the most notable discrepancy between Deuteronomic platform and Josianic policy (2 Kgs 23:9).

The second recurring theme of Samuel and Kings—God's promises to David—was undergirded by Judah's experience: nearly 400 years with a single dynasty in power. With the destruction of Jerusalem and Judah (587) the corpus underwent a final editing, ending with release of the Davidic king Jehoiachin from a Babylonian prison (2 Kgs 25:27–30).

Evidence for the growth of the book of Judges corresponds in general to the foregoing description of the larger corpus: an old didactic collection of preformed narrative units was redacted in two major stages, Josianic and post-Josianic.

Traditions taken up in the book of Judges are thus neither so much promonarchical or antimonarchical as they are amonarchical and pro-Mosaic, with the rule of ethic and governance by Yahweh alone making the difference between anarchy and community well-being, i.e., premonarchic memories are adapted for the postmonarchic era.

3. Archaeology and Social World. For a 13th-century setting of the exodus and career of Moses (better later in the century than earlier) and for the problematics of reading archaeological data alongside biblical texts, see JOSHUA, BOOK OF, section C.3.

If Judges 1 is read as a flashback, then despite Joshua's achievement there was a period after his death when the situation deteriorated to the point where many towns and regions had in effect to be "conquered" all over again. On any reading of the chapter it is impossible to square the stories entirely with evidence from excavations and surveys. On the one hand, archaeology in the Judahite hill country and Shephelah has documented widespread upheaval in the period ca. 1250–1150 B.C.E. On the other hand, a number of plausibly identified biblical sites in the far S, towns which are said to have been conquered or settled in Joshua–Judges, were not actually founded until the 10th century when Israel had become, under David, a territorial state, controlling a small empire. Given the frequency and ease with which an ancient population (and

its town name) could relocate after major destruction (with often a natural cause) to a promising nearby site, it is probably futile to seek one-for-one correlations with the brief notices brought together in Judges 1.

Of the major places of assembly in Judges only the location of Gilgal (2:1), somewhere near Jericho and, in any case, not a sizable "ruin," is uncertain.

Recent excavations at Tell Dan point to mid–12th century for its takeover. Bethel (modern Beitin), figuring prominently in the outer framework of Judges (1:22–26; 20:18; 21:2) is probably identical with Bochim in 2:1–5, as well as the target of polemic in the Micah stories (chap. 17). The site shows a 13th-century destruction followed almost at once by resettlement.

Bethel is also a point of reference for locating the sacred tree where Deborah held forth (4:5), in whose story "Jabin King of Canaan who reigned in Hazor" is at the root of resistance to the Israelite caravan trade through the plain of Esdraelon. Hazor (Tell el-Qedah) saw a destruction of the LB city in the second quarter of the 13th century. But in the earliest Iron Age town (presumably "Israelite") there is a characteristic Canaanite temple with corresponding furnishings. It was in this period that N Galilee saw a rapid spread of new, unwalled, upland settlements, and terrace farming, for the first time in history. The data thus attest to shifting demographic patterns in the far north providing a plausible setting for the flashback to the era of the Jabin (Joshua 11) whose policy at Hazor explains the subsequent move of a Kenite clan to the far N, and Jael's presence in Judges 4 and 5, which celebrate victory "at Taanach by Megiddo's stream." Extensive excavations at Megiddo and Taanach show a significant occupational gap at the former. Megiddo was abandoned or lightly occupied from ca. 1125 to the beginning of the first Iron Age town there, ca. 1100–1050. Taanach in the 12th century was, like Hazor, not extensively occupied, and was destroyed ca. 1125. The team of Deborah and Barak may thus plausibly be located in the second half of the 12th century.

Likewise Abimelech at Shechem. There was a destruction of the LB city in the 14th century (cause unknown), but it was soon reoccupied and followed by an interlude of roughly 200 years before it was destroyed again, in the middle to late 12th century. The latter destruction may reasonably be correlated with the story of Abimelech in chap. 9.

The same long interlude at Shechem saw a blossoming of unwalled settlements, for the first time in history, throughout the hill country to the N of Shechem and to the S as far as Hebron. Like the roughly contemporary phenomenon in N Galilee, these settlements were occupied by families practicing a subsistence agricultural economy based on construction of terraces for dry-farming (see JOSHUA, BOOK OF, section C.3; and Stager 1985).

These developments centering in the Shechem area may in turn be viewed against the background of Shechem's pragmatic stance vis-à-vis Egyptian administration in the 14th century, as seen in the activities and attitudes of Labayu and his sons, in the Amarna correspondence (Campbell 1960). Whatever the cause of the 14th-century destruction of Shechem, it did not curtail a movement toward functional independence in the wider area.

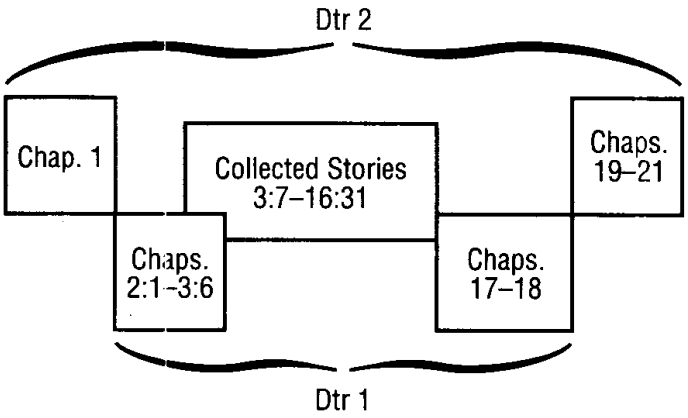
Shiloh and the W Mizpah figure only in the outer framework, and both may well have emerged as prominent in the wake of Shechem's destruction. Mizpah (probably Tell en-Nasbeh) was one of the many new settlements atop the hill country in the late 13th–early 12th centuries. Shiloh was an out-of-the-way rallying point, a town site which had lain in ruins largely uninhabited throughout the LB Age. It became another of the flourishing farming settlements and probably had a small temple in the pre-state period. With subsequent destruction of Shiloh by the Philistines, the place of Israelite muster once again became Gilgal, in the days of Samuel and Saul.

The Philistine crisis which generated the Samson stories was not finally surmounted until the establishment of monarchy with Saul and the transformation of Israel into a territorial state centered in W Palestine under David and Solomon. In this respect, Israel lagged some two centuries behind developments in Transjordan where a strong territorial state, Moab, was already in place on the plateau S of the Arnon, with a smaller Ammonite state at the desert fringe of Gilead, in the era of Moses (see Sauer 1986). In the case of Israel it was not so much cultural lag as it was communal preference and sworn allegiance to a divine Sovereign which undergirded resistance and rebellion. Conflicting Ammonite, Moabite, and Israelite claims N of the Arnon, and Jephthah's negotiations in chap. 11, now make sense in view of shifting demographic patterns as reconstructed from excavations and surveys in Transjordan. See also JOSHUA, BOOK OF, section C.3. The re-emergence of Israel as an effective tribal organization happened first in Transjordan, to which point it was nearly pushed back by the time of Samuel.

Early Israel was, in many respects, what anthropologists call a segmented society with correlated lineage systems. In such societies political organization is regularly based on genealogical reckoning and operative descent rules. As segments move from one place to another, undergo expansion or decline due to whatever circumstances, new adjustments result and genealogy, in time, adjusts to affirm the new arrangements, which come to be widely accepted as the way it has always been. Something similar happens with chronology. The large round numbers assigned to careers of savior-judges, and the more plausible shorter careers of "minor judges" (with some in both categories very likely contemporaries), are arranged end-to-end for an improbable lengthy era.

The hypothesis that early Israel was such a segmented society helps to understand the tensions which pervade the book of Judges, on both the N-S axis and the E-W axis. Some of these roots go deep, not only to the post-Joshua constituencies and their leaders in times of crisis, but on into the pre-Mosaic and pre-Yahwistic period of "Elohistic" Israel (see also JOSHUA, BOOK OF, section C.4).

4. Levitical Sponsorship? Dtn, Dtr 1, Dtr 2. While it is clear that the finished book of Judges shortly foresees or soon follows the dismantling of state and temple in 587, interpretation is inadequate which regards the book and the larger corpus as mainly an etiology of national destruction. Throughout the Former Prophets are signs of at least two major "editions," both of them making use of older units and large blocks of material, and both of them shaped by a book of Mosaic Torah. Dtn, Dtr 1, and Dtr 2 are convenient shorthand for this sequence of editions.



Dtr 1 forms the major portion of the Former Prophets, a late preexilic product probably from the reign of the reforming King Josiah. Designed to be supportive of life under a monarchy reformed according to the law of Moses, it presents Joshua as an ideal for the king in matters military, while the stories of Judges are left unrevised to display the problematics of life without monarchy.

Dtr 2 is a subsequent edition. It may be exilic, but need only be post-Josianic to account for the editorial editions.

Dtn is the bulk of Deut 4:44–28:68, an old Book of the Law of Moses, rediscovered in Josiah's day, which effectively accounted for the demise of the N kingdom. Given a new introduction, it became a theological preface to the story unfolding from the era of Moses to the Mosaic revival, late 7th century B.C.E. *Dtn* is neither promonarchical nor antimonarchical, without the explicit regulation of kingship in Deut 17:14–20, which therefore appears to be secondary. Clearly *Dtn* stems from no "royal" sanctuary. It most likely stems from levitical circles claiming premonarchical legitimacy, mostly in the N, and calling for grassroots covenant renewal on the Sinai/Moab/Shechem pattern. Continuing rivalry of levitical-priestly families claiming descent from Aaron (Jerusalem, Bethel, Hebron) or Moses (Dan, Shiloh, and probably Shechem) explains many tensions in the traditions. See also JOSHUA, BOOK OF, section C.5.

With the collapse of the N kingdom and a flooding of refugees and immigrants into the S, and with Josiah's closure of sanctuaries a century later but without adequate provision for unemployed priests, the constituencies would be in place in Jerusalem to account for the contrasts between *Dtr 1* and *Dtr 2*. The former (mainly Aaronite) frames a collection of stories with polemic against Bethel and Dan, and centers in the demolition of Shechem. *Dtr 2* (mainly Mushite) is clearest in the tragicomic frame around the entire era: united in chap. 1 for offensive war but on the ropes by the end of the chapter, reunited at last but for civil war which nearly eliminates a tribe at the end of the era.

The main configuration of the structure of Judges may thus be presented in schematic outline:

JUD.02. Structure of the book of Judges.

Slavish reliance upon archaic institutions which had displaced Yahweh's governance (i.e., "going by the book") is consigned to the past. The chaos and despair that descended on Judah in the wake of Josiah's death is countered by a comic vision that has rediscovered an enduring center of religious faith in public life. For commentaries, see Boling *Judges* and *Joshua* in AB, Hoppe *Joshua Judges* OTM, commentaries on Joshua/Judges/Ruth in NCBC (Gray) and ATD (Hertzberg), and commentaries on Judges in CBC (Martin), OTGuides (Mayes), IB (Myers), and OTL (Soggin). For further discussion, see *CMHE;* Freedman *IDB* 3: 711–27; and *WHJP* 3/2: 23–38, 3/7: 129–63.

JUDGMENT, DAY OF. See DAY OF JUDGMENT.

JUDGMENT, HALL OF (PLACE) [Heb *ʾulām hammišpāṭ*]. One of the buildings associated with Solomon's palace complex (1 Kgs 7:7). The context of the passage suggests that this was another name for the main ceremonial hall, or "Hall of the Throne" (throne room), where one might have an official audience with the king. The text seems to list the major compartments of the palace complex as one would logically encounter them moving from the (public) entrance to the (private) living quarters: one first had to pass through the Hall of Pillars to reach the Hall of Judgment. Assuming that Solomon's palace was constructed along the typical lines of the Syro-Phoenician *bīt hilāni,* the "Hall of Pillars" would correspond to the portico and front hall of the typical *bīt hilāni,* while the "Hall of Judgment" would be the large room behind it. Not only was this room equipped with a dais for the throne, it seems to have been furnished with either an open hearth or a portable brazier (Jer 36:22), as attested in other *bīt hilānis* (see Ussishkin 1973).

GARY A. HERION

JUDITH (PERSON) [Heb *yĕhûdît*]. **1.** The wife of Esau and daughter of Beeri the Hittite (Gen 26:34). Hoffner (1969: 32) has shown that the names of persons called "Hittites" in the OT are almost all good Semitic names, e.g., Ephron, Gen 23:8; Adah, Gen 36:2; Ahimelech, I Sam 26:6; etc. Judith is a good Semitic name from Heb *yĕhûd* (plus the feminine gentilic suffix), meaning "Jewess." Therefore, it is most likely that Judith is part of a group of Canaanites living in the hills near Hebron and not a Hittite from Anatolia. This conclusion is also supported by Gen 36:2 where Esau took wives from the Canaanites, including Adah the daughter of Elon the Hittite, and by Gen 28:1 where Isaac charges Jacob not to marry one of the Canaanite women (as Esau had done, cf. Gen 27:46).

2. Heroine of the book of Judith (Gk *Ioudith*), daughter of Merari and widow of Manasseh (Jdt 8:1–2). Her genealogy, extending back 16 generations, is one of the longest in the OT and indicates her importance. Using her beauty and courage she enticed Holofernes, general of Nebuchadnezzar, and cut off his head. This enabled her to deliver the Hebrew people from a seemingly invincible foe. In addition, her piety and patriotism are models for emulation.

JUDITH, BOOK OF. Named after its heroine (Gk *Ioudith* = Heb *yhwdyt,* "Jewess"), this book, whose central theme is "The Omnipotent Lord has foiled them by the hand of a female" (Jdt 16:5), is regarded by Jews and Protestants as apocryphal, and by Roman Catholics since the decrees of the Council of Trent in 1546 as deuterocanonical.

A. Summary

The content of the book may be summarized as follows. In the twelfth year of his reign Nebuchadnezzar, king of the Assyrians, left his capital Nineveh to wage war against the Median king, Arphaxad. While many of Nebuchadnezzar's subjects in the east rallied to his aid, those in the west, from Cilicia in the north to Ethiopia in the south, scoffed at his appeal for help. Unable to do anything about it at the time, he swore that some day he would punish them for it. Finally, in his 18th year (the year after he had destroyed Arphaxad and his "invincible" city, Ecbatana) Nebuchadnezzar decided to avenge himself on the west (chap. 1).

Summoning Holofernes, his greatest general, Nebuchadnezzar spelled out his plans for revenge: those nations who would submit to Holofernes by offering tokens of earth and water Nebuchadnezzar would personally deal with later; meanwhile those refusing to submit to Holofernes were to be slaughtered and looted without mercy.

So Holofernes marshaled an enormous army of 120,000 choice infantrymen, 12,000 mounted bowmen, as well as the support people and supplies needed for such an army. Starting out from Nineveh, they made the trek to Bectileth in N Cilicia in just three days. Then the army hacked its way through Put and Lud, plundering Rassisites and Ishmaelites in the process. Crossing the Euphrates River and proceeding through Mesopotamia, Holofernes' army then razed the walled towns along Wadi Abron and occupied Cilicia. Many people and towns were destroyed by him,

including Midianites and peoples in the plain. Seacoast towns such as Sidon, Tyre, Okina, Azotus, and Ascalon (chap. 2) threw themselves upon his mercy, saying, "Come and treat us as you see fit." Holofernes not only tore down their sanctuaries and sacred poles, but even commanded that everyone should worship Nebuchadnezzar as god—and him only!

Holofernes' army then advanced toward Esdraelon and camped between Geba and Scythopolis (chap. 3). The Israelites in Judea, who only a short time before had returned from exile and had just recently rededicated their Temple at Jerusalem, were terrified. The territory of Samaria and cities like Kona, Beth-horon, Belmain, and Jericho secured their hilltops and prepared for war. Joakim, the high priest in Jerusalem at the time, specifically ordered Bethulia and Bethomesthaim, near Dothan, to secure the passes (since access to Judea and Jerusalem was through a narrow pass wide enough for only two men at a time to pass).

Israelites throughout Judea—priests, men, women, children, even animals—wore sackcloth, and were fasting and praying for themselves and especially for their Temple at Jerusalem (chap 4).

When Holofernes learned of this resistance, he was both surprised and angered. Demanding information on the Israelites, he got a full report from one Achior, leader of the Ammonites. Achior told how the Israelites had lived first in Chaldea, next in Mesopotamia, and then in Canaan. There they grew rich until a terrible famine forced them to Egypt, where they were ultimately enslaved by Pharaoh. Through the intervention of their god, they left Egypt, their god even drying up the Red Sea for them. They lived in the Sinai for a while, but then invaded the land of the Amorites, driving out its inhabitants. "And as long as they did not sin against their god," Achior said, "they prospered." But the Israelites sinned so much that finally their god allowed them to be conquered and exiled to a foreign land, from which they had just recently returned. If these people were sinning now, Achior was certain, their god would let the Assyrians conquer them. But if not, then the Assyrians could not defeat them (chap. 5).

Holofernes and his staff scoffed at Achior's counsel. He "rewarded" Achior by setting him in a place where the Israelites might find him and adopt him as a friend. Thus, Achior would share their fate, death at the hands of the Assyrians.

Once the Bethulians found Achior and heard his story, they renewed their prayers while Uzziah, their chief magistrate, took Achior into his own home (chap. 6).

Holofernes, on the advice of the leaders of Esau and Moab, seized the water sources of Bethulia, thereby assuring that the town would die either of starvation or thirst. And indeed after thirty-four days of siege, the cisterns of Bethulia were going dry and its people were collapsing in the streets. The situation was so desperate that its citizens demanded that their magistrates surrender the city, arguing that it was better to be living Assyrian slaves than "free" Israelite corpses. Uzziah offered them a compromise: if there was no relief from God within the next five days, then they would surrender the city (chap. 7).

Everyone in Bethulia accepted the compromise except one person, Judith, daughter of Merari. This beautiful and wealthy young widow of Manasseh was best known for her piety (since the untimely death of her husband almost three and a half years earlier, she had devoted herself to prayer and to fasting on all days except when they were prohibited). No one ever spoke ill of her. She summoned the three magistrates to her place and upbraided them, scolding them for trying to put God to the test. She insisted that God will do as he pleases, unmoved by the ploys of men. God might very well be testing his people in the present crisis, for, unlike some earlier occasions, he was not punishing them now inasmuch as they had not sinned against him. To Uzziah's snide suggestion that she, being such a righteous woman, should intercede for the people, Judith offered a counterproposal: she and her maid would leave town that night, and within five days the Lord would deliver Israel by her hand. The magistrates promptly gave her their blessing (chap. 8).

But first Judith, covered with sackcloth and ashes, prayed to the Lord, begging him for the same support he had granted her ancestor Simeon when he avenged Hamor's rape of Dinah. She begged God to crush the Assyrian forces threatening Jerusalem and its Temple. She also prayed for a beguiling tongue and a strong hand to overthrow her enemy (chap. 9).

Her spiritual preparation completed, Judith bathed and put on her most fetching attire, so that every male who saw her, be he Israelite or Gentile, was struck by her beauty. Then, with the blessing of the town fathers, she and her maidservant left Bethulia, taking with them only enough kosher rations for a few days.

As the two made their way through the valley, they were arrested by an Assyrian patrol, who, captivated by Judith's beauty, ended up personally escorting them to Holofernes' tent (chap. 10).

Holofernes' efforts to reassure Judith were clearly unnecessary, for she immediately took charge. She shamelessly flattered him on his accomplishments, assuring him, "I will say nothing false to 'my lord' this night" and "If you follow the advice of your maidservant, God will accomplish something through you, and 'my lord' will not fail to achieve his ends." She told Holofernes about what had transpired between Achior and the Bethulians. Moreover, Judith confirmed Achior's words to the Assyrians: Israel could not fall to the Assyrians unless it had sinned against God—and, Israel was about to do exactly that! The siege of Bethulia would shortly prompt its citizens to eat and drink things forbidden by their God. When they did that, they would deserve to die at Assyrian hands. Therefore she would remain in camp, leaving it only at night with her maid to pray. When God revealed to her that the impending sacrilege had occurred, then she herself would guide Holofernes' army to Jerusalem without loss of life or limb.

Delighted by her information and beauty, Holofernes believed her every word (chap. 11). To his invitation that she share his dinner, Judith declined, insisting that "Your servant will not exhaust her [kosher] supplies before the Lord God accomplishes by my hand what he has planned."

Until late that night and for the next three days Judith stayed in her own tent, leaving the Assyrian camp only at night to bathe and then pray, after which she would eat her one meal of the day. But on the fourth day Holofernes, intent on seducing her, invited her to a small dinner party

in his tent. "Dressed to kill," Judith accepted his invitation, saying, "I will do whatever 'my lord' desires right away, and it will be something to boast of until my dying day."

His lust welling up within him, Holofernes drank so much wine (chap. 12) that by the time everyone but Judith had tactfully withdrawn for the evening, he was sprawled on his couch, dead drunk. Judith, taking his sword and praying for strength, struck Holofernes' neck twice, chopping his head off and then rolling his body onto the floor. Next she grabbed his canopy and had her maid drop the head into her sack. The two of them then, as usual, left the camp "to pray."

Arriving in Bethulia, Judith told everyone what God had done, how he had shattered the enemy by the hand of a mere female. As she offered Holofernes' head as evidence, she assured them that her "honor" was still intact (chap. 13).

Judith then mapped out the strategy for the next day. The Bethulians were to act as if they were coming down to fight, whereupon the Assyrians would alert their general, only to find him and themselves headless. *Then* the Israelites would attack.

That settled, Judith had Achior brought to her. On seeing the severed head, Achior collapsed. After hearing her story, Achior firmly believed in Israel's God, to the extent of his being circumcised and becoming a Jew, as are his descendants to this day.

The next day it all happened exactly as Judith had planned. The Assyrians panicked when they learned about Holofernes (chap. 14). Not only did the Bethulians attack them, but so did Israelites from all their cities far and wide, pursuing the Assyrians as far as Damascus. Looting the Assyrian camp took an entire month, during which time the high priest Joakim and the Jewish Council came down from Jerusalem to visit the scene and congratulate Judith. Then she and the people gradually worked their way toward Jerusalem, the women dancing along the route and the warriors, armed and garlanded, marching behind them (chap. 15).

Along the way Judith sang a psalm that told of the murderous boasts of the Assyrians, how "the Omnipotent Lord had foiled them by the hand of a female," and how "Her sandal ravished his eyes; her beauty captivated his mind; and the sword slashed through his neck!" She also insisted that burnt offerings were of little significance to God; rather, he was impressed by a person's fear of him.

Once back home, Judith remained there for the rest of her life. Although many men wanted her, she remained a celibate. Before dying at the ripe old age of 105, she manumitted her faithful maidservant and distributed her property among her closest relatives on both sides of the family. For the rest of Judith's life—and for a long time afterward—no one dared to threaten her people (chap. 16).

The preceding summary has been unusually detailed so as to enable the reader to perceive some of the book's strengths and weaknesses. The story, at least as presented in the Greek, is well told, especially chapters 10–13, which are a masterpiece of irony. The character and personality of both Judith and Holofernes are most vividly drawn. (Even supporting characters like Nebuchadnezzar, Uzziah, and Achior seem to have a life of their own.) And whether or not one agrees with the book's theology and ethics, its religious concerns and values are effectively expressed in the story's plot, speeches, and prayers. Nonetheless, the book bristles with problems.

B. Historicity

The story purports to be a historical account, and indeed it has many of the outward trappings of one, including various kinds of dates and numerous well-known and unknown (but not improbable) ethnic, personal, and place names. Even more important perhaps, apart from a few improbable details and obvious embellishments for literary effect, such as the Palestinian "Thermopylae" in Jdt 4:7 (see Momigliano 1982: 227–28), the story has a quite believable plot. Divine or miraculous intervention is virtually absent, the book's frequent allusions to praying and fasting notwithstanding. It is Judith and her courageous people who destroy the enemy. Thus a present-day scholar like Montague (1973: 8) can conclude that the author of Judith

> reworked . . . a story whose historical nucleus went back two centuries to the Persian period . . . there is a historical nucleus which gave rise to the Judith tradition, though this nucleus is now difficult to recover.

But as long ago as 1689, when Capellus characterized the book as "a most silly fable" (*Commentarii et notae criticae in Vet. Test.*, p. 575), scholars have questioned the story's historicity because of its shocking carelessness with well-established historical and geographical facts: "The use by its author of Jewish history from the Bible is marked by either freedom or recklessness about such matters as chronology" (Sandmel 1978: 62). The most flagrant "errors" are, of course, those in the opening verse: "It was in the *twelfth* year of the reign of Nebuchadnezzar, who ruled over the *Assyrians* from his capital *Nineveh* . . . ," because, as most students of the Bible know, Nebuchadnezzar was king of Babylonia, not Assyria, and Nineveh was destroyed in 612 B.C., that is, several years *before* Nebuchadnezzar came to the throne. Finally, the twelfth year of Nebuchadnezzar would have been the fourth year of the reign of Zedekiah (cf. Jer 32:1), Judah's last king in the *pre*exilic period; yet elsewhere in Judith the story is set in the *post*exilic period (cf. 4:3, 6; 5:18–19). These are but the story's most egregious historical "blunders."

As for the book's geographical errors, Holofernes' enormous army accomplished the 300-mile trek from Nineveh to N Cilicia in *three days* (2:21), then fought its way through Put and Lud ([2:23], countries usually identified by scholars as Libya in Africa and Lydia in Asia Minor), only to find itself crossing the Euphrates and going west *through Mesopotamia* (2:24) to Cilicia (2:25)! Even though Holofernes' itinerary along the Palestinian coast appears more geographically correct, his attack against Bethulia and Judea seems to come from the north (cf. 4:6; 8:21; 11:14, 19); yet 7:17–18 suggests that his attack came from the south, the latter view being also that of the Vulgate and its Aramaic source (see below).

With 4:6, geographical errors give place to geographical ignorance and uncertainty, for five of the eight Israelite cities mentioned there are unidentifiable. Worst of all, the

location of Bethulia, which is mentioned 19 times in the text (but nowhere else in the Bible!) and whose setting includes a number of geographical and topographical clues (cf. 3:10; 4:6; 6:11; 7:12–13; 10:10–11; 11:19) is *totally unknown*. See BETHULIA (PLACE). Nonetheless, some historical atlases (e.g., *MBA*, 132) "locate" it on one of their maps.

All this being the case, it is perhaps a bit surprising that Achior's summary of Israel's history is (given, of course, its brevity and purpose) a reasonably accurate one, albeit from a Deuteronomistic point of view.

C. "Explanations" for the Book's Errors

Scholarly efforts over the past century to preserve some semblance of historicity for the Judith story have taken three major tacks, each with a number of "minor" variations supplied by its later proponents.

Steinmetzer (1907) proposed the "evolving text" theory. The original story, Steinmetzer argued, concerned events in the days of Ashurbanipal of Assyria (668–627 B.C.) but was later given a new setting in the days of Cyrus the Great of Persia (550–530 B.C.), and still later, of Artaxerxes I Longimanus (465–424 B.C.), also of Persia; the narrative was finally adapted to the events and atmosphere of the days of the infamous Antiochus IV Epiphanes of Syria (175–163 B.C.). Thus, the theory "explained" the various elements in the Judith story that were appropriate for a particular historical time and place.

The second theory was the "pseudonym hypothesis," according to which, for one reason or another, all the characters in Judith were deliberately disguised historical personages. Thus, for example, Judith's "Nebuchadnezzar" and "Holofernes" actually represented the Emperor Trajan and Lusius Quietus or Pompey and his general Scaurus or Antiochus IV Epiphanes and his general Nicanor. But even though the pseudonym theory now looks better, especially in light of the Essene practice in the Dead Sea literature of giving well-known persons a disguised name, the theory fails insofar as full and exact parallels for all the characters within a particular scenario or historical period seem lacking.

The third, and probably the most popular hypothesis, is the "two-accounts theory," in which the Judith story (chaps. 4–16) was combined with the "historical" account of a pagan king's war in the east and west (chaps. 1–3). On the basis of internal onomastic and historical clues, scholars have variously identified Judith's "Nebuchadnezzar" as Ashurbanipal of Assyria; Artaxerxes III Ochus of Persia (358–338 B.C.)—who actually had a general named Holofernes and an advisor named Bagoas; Antiochus IV Epiphanes of Syria; or Demetrius I Soter of Syria (162–150 B.C.), not to mention "Nebuchadnezzar IV" and others. (For details, see Pfeiffer 1949: 295–96; and Soubigiou *Judith* SBJ 4: 490.)

The postexilic setting of the story (cf. 4:3; 5:19), the presence of Persian terms (e.g., *kidaris*, "turban," in 4:14; and *akinakēs*, "sword," in 13:6) and practices ("to prepare earth and water" in 2:7) as well as authentic names of that period (e.g., Judith [see Heltzer 1980], Holofernes, Bagoas, and Joakim), plus (with the exception of "Scythopolis" in 3:10 and "Azotus" in 3:28) the absence of Greek personal and place names—all make it quite likely that the storyteller utilized information, possibly oral in form, from the time of Artaxerxes III (*HJP*^{2} 3/1: 218). But if so, the story in its present form was written much later.

D. The So-Called "Imbalance" of the Book

The oft-cited charge that chaps. 1–7 (i.e., the story prior to Judith's appearance) are detractive and peripheral to the "real" story (i.e., Judith 8–16) has been refuted, hopefully once and for all, by Craven (1977; 1983). She has shown that chaps. 1–7, in a number of ways and on a variety of levels, serve as an effective and indispensable foil for chaps. 8–16. In the first half of Judith, Nebuchadnezzar and Holofernes, resorting to fear and brute, masculine force, won many battles; but Judith, with her "soft" feminine beauty and wiles, reinforced by her religious faith, won the war. Israelite men hid behind their city walls (Judith 4–6) while Judith and her maid went out to meet the enemy face-to-face (Judith 10–13).

Craven's compositional analysis proves that the book is made of a whole cloth and was intended from the beginning as a balanced and proportional narrative. As shown in Fig. JUD.03 (see Craven 1977: 60, 87–88), each half of the book has a threefold chiastic structure and a distinctive thematic repetition, namely, *fear* or its denial in Judith 1–7, and *beauty* and its effects in 8–16. In terms of both content and form, then, Section D (Judith's triumph over Holofernes) is the heart of the story as well as the center of the chiastic structure.

In some respects, the book of Judith is misnamed. Its message and structure would have been more clearly perceived if down through the ages it had had a more appropriate title, such as "Beast and the Beauty."

E. The Prose and Poetic (16:1–17) Accounts

Like the story of the Canaanite oppression in Judges 4 and 5, the tale of Judith has both a prose (Judith 1–15) and a poetic version (16:1–17).

Although scholars debate whether the poetic version in Judith was composed before, after, or at the same time as the prose narrative, Jansen (1936: 63–71) and others (Dancy, *Judith* CBC; and Moore, *Judith* AB, 252–57) maintain that the author of the prose account adopted a synagogal psalm—one patterned after the song of triumph par excellence, namely, the Song of the Sea in Exodus 15 (see Skehan 1963)—and adapted it; i.e., substituted what is now 16:5–10 (a masterpiece of irony) for the "incident" originally recounted in the synagogal hymn. If so, then it is likely that 16:13–17 are, even as they claim to be, "a new song" (16:13), that is, they represent an even later addition. In comparison with the rest of the song and the prose account, vv 13–17 are inferior in literary style and theologically different, in that they contain "apocalyptic/eschatological" elements (16:15, 17) and deemphasize the cultus (16:16).

F. Genre

If Judith is not history, then what is it? Over the past century three general types of answers have been given, each having a number of variations. Many students of the book have agreed that it is a *novel*, but they have disagreed as to the particular type. Is it "a Jewish novel" (Altheim and Stiehl 1963: 200–1), "a Jewish-Hellenistic novel"

Chapters 1–7

1. Introduction to Nebuchadnezzar and his campaign against Arphaxad (1:1–16).
2. Nebuchadnezzar commissions Holofernes to take vengeance on disobedient vassal nations (2:1–13).
3. Development:

- A. The campaign against the disobedient nations; the people surrender (2:14–3:10).
- B. Israel hears and is "greatly terrified"; Joakim orders war preparations (4:1–15).
- C. Holofernes talks with Achior. Achior is expelled from the Assyrian camp (5:1–6:11).
- C' Achior is received into Bethulia; he talks with the people of Israel (6:12–21).
- B' Holofernes orders war preparations; Israel sees and is "greatly terrified" (7:1–5).
- A' The campaign against Bethulia; the people want to surrender (7:6–32).

Chapters 8–16

- A. Introduction of Judith (8:1–8).
- B. Judith plans to save Israel (8:9–10:9a).
- C. Judith and her maid leave Bethulia (10:9b–10).
- D. Judith overcomes Holofernes (10:11–13:10a).
- C' Judith and her maid return to Bethulia (13:10b–11).
- B' Judith plans the destruction of Israel's enemy (13:12–16:20).
- A' Conclusion about Judith (16:21–25).

JUD. 03. Chiastic structure in the book of Judith.

(Zenger 1981: 437), "a religious novel" (Andrews 1954: 35), "a short historical novel which carries a strong religious message" (Dancy *Judith* CBC, 67), or "a quasi-historical novel" (Metzger 1957: 51)?

Others have maintained that Judith is some type of *folktale:* "an epic rescue story" combining the themes of the Faithful Wife and the Female Warrior (so Coote in Alonso-Schökel 1974: 21–26; Thompson 1955–58, type 888), or a tale exemplifying "the perennial battle of the sexes" (so Dundes in Alonso-Schökel 1974: 28–29), or "an example narrative," with suprahistorical or metahistorical dimensions in which Nebuchadnezzar is a type of Anti-Yahweh (Haag 1963: 38–42).

Still other scholars have characterized the book as an *apocalypse:* one with eschatological aspects (so Scholz 1885), or "an apocalyptic parable" (Lefèvre, *SDB* 4: 1315–21), or an expression of *Heilsgeschichte* ("Salvation History") portraying a battle essentially between Yahweh and Anti-Yahweh (Dreissen 1953: 81), or a synthesis of two genres, the haggadic and the apocalyptic (Steinmann 1953: 129; Delcor 1967).

Doran (1986: 304) rightly cautions against reading Judith "in too allegorical a manner." It may be that those who subscribe to the apocalyptic/eschatological interpretation have put an undue emphasis on Jdt 16:15a and 17, neither of which need necessarily be interpreted in an apocalyptic or eschatological sense and, in any case, may not have been part of the text originally (so Jansen 1936; Moore, *Judith* AB, 251–52, 253–57). It should also be noted that Holofernes, not Nebuchadnezzar, is the villain who gets his deserved punishment.

All things considered, the book of Judith is best regarded as a folktale which offers an example story of a pious widow who, strengthened by her religious faith, courageously took matters into her own hands and defeated the enemy.

G. Irony: The Key to the Book

No biblical book is so quintessentially ironic as Judith. Failure to recognize this fact has been a primary reason for a number of misinterpretations of the book. The author of Judith was an ironist *extraordinaire* who, because he often meant the opposite of what he said, was sometimes misunderstood. A perfect case in point is the very first verse of Judith. Torrey (1945: 89) rightly maintained that Judith's ancient audience would have understood that verse as ironic, even as a modern reader would understand a story which began, "It happened at the time when Napoleon Bonaparte was king of England, and Otto von Bismarck was on the throne in Mexico." The storyteller, speculated Torrey, might even have given his listeners "a solemn wink" as he delivered his opening sentence.

Judith herself is certainly an ironic figure: a beautiful and desirable widow, she lived the life of a celibate after her husband's death; a childless widow, she gave spiritual and political rebirth to her people; a wealthy woman, she spent most of her life fasting; very feminine in appearance, she brutally murdered Holofernes with her own two hands.

Holofernes, too, is an ironic figure: able to conquer the entire west, he was unable to conquer Bethulia; intending to master Judith, he was mastered by her—by the very sword with which he himself had used to claim the lives of so many others.

Even the minor characters are ironic. Achior, a seasoned warrior, fainted upon seeing the decapitated head. A man of action, Achior was also a wise man, almost an Ahikar *redivivus* (Cazelles 1951). See ACHIOR (PERSON). A pagan Ammonite, Achior from the beginning showed more faith in Israel's God than did the Israelite magistrate of Bethulia, Uzziah (= "God is my strength"), who in "womanly" fashion hid behind the safety of high walls while Judith, in "manly" fashion, went out to meet the enemy face-to-face. (On the "serial androgyny" of Judith, see Montley 1978.) King Nebuchadnezzar, "Lord of the whole world" (2:5) could not conquer Israel. The Assyrian soldiers who arrested Judith ended up escorting her to Holofernes' quarters, a perfect example of the captive taking captive the captors.

Good (1965: 81–82) has shown that there are several forms of irony in the OT, including

> *punctual* irony, the use of words and expressions of ironic intention . . . at, more or less isolated, "points" . . . *episodic* irony . . . an entire episode with an ironic aim or intent . . . [and] *thematic* irony, the conjunction of a number of episodes all of which point to an ironic theme or motif.

All three types of irony abound in Judith. Of the numerous examples of *punctual* irony, one might note the following: "So who are you, Achior, . . . that *you play the prophet,* . . . advising us not to make war against the people of Israel because their god will protect them? *Who is god except Nebuchadnezzar? He will send his forces and wipe them off the face of the earth! Their god won't save them.*" (6:2); *"My servants will now 'deliver' you* to the hill country . . . *You will not die—until you are destroyed with them!"* (6:6–7); *"God did well to send you* [said Holofernes to Judith] . . . to give strength to our hands and destruction to those who insulted my lord . . . If you do as you have promised, . . . *you shall . . . be famous throughout the world"* (11:22–23).

As for *episodic* irony, the punctual ironic statements taken together in the exchange between Holofernes and Achior (e.g., 5:5, 20–21, 23–24; 6:2, 3, 5, 7–9) or those in the exchanges between Holofernes and Judith (e.g., 11:1, 5–6, 16, 22, 23; 12:4, 14, 18) constitute splendid examples. Moreover, when these two episodes are taken together, *thematic* irony is created, i.e., Achior spoke the truth and was *not* believed while Judith dissimulated, equivocated, and outright lied—and was believed!

The heroine's relationship with all the males in the story—the elders, the Assyrian soldiers, Achior—is ironic, but especially so with Holofernes. For as Winter so nicely put it, "Holofernes, on seeing Judith, loses his head before it has been cut off" (*IDB* 2: 1024). For the brutal murder itself, the author uses most erotic terms: "Her sandal *ravished* his eyes; her beauty *captivated* his mind; and the sword *slashed through* his neck!" (16:9). Given the patriarchal character of Judith's day, one can scarcely imagine a more ironic theme than the book's central one: "The Omnipotent Lord has foiled them by the hand of a female" (16:5). (For a more detailed analysis of irony in Judith, see *Judith* AB, 78–85.)

H. Religious Views and Values

The theological views and values of the author are skillfully conveyed in two ways: (1) explicitly by the speeches, prayers, and conversations of the characters; and (2) implicitly by the actions of the characters, especially Judith.

1. In Speeches, Prayers, and Conversations. In Judith, neither God's various titles (4:2, 11; 5:8; 6:19, 21; 7:28; 8:11; 9:2, 7, 11, 12; 13:18) nor his attributes (see 4:13; 8:14, 20; 9:2, 11, 12; 16:13, 15) are in any way unusual or noteworthy. As in other postexilic books, Yahweh is the Creator of the Universe and the Lord of History (see 9:5, 13; 13:18) who has guided Israel from the days of the patriarchs (5:26; 8:26; 9:2–4) down through the postexilic period (5:17–19; 8:18–20), and will continue to do so until the very end (16:17).

God's covenant with Israel is interpreted largely in Deuteronomistic terms (5:17–18, 20–21; 8:20; 11:10). Consequently, there is a very strong emphasis on the importance of Jerusalem (4:2; 10:8; 11:19; 15:9; 16:18), its Temple (4:2–3, 12; 8:21, 24; 9:8, 13; 16:20), and everything associated with it, including its altar and utensils (4:14–15), high priest (4:6), the priests and Levites (4:14–15), and various kinds of sacrifices and offerings (4:14; 9:1; 11:13; 16:18 [16:16 notwithstanding]). The efficacy of prayer, fasting, and wearing sackcloth (4:11–15; 8:5–6; 9:1) is unquestioned. Judith's concerns for *kašrût* are central to her character as well as to the plot (10:5; 11:11–15; 12:4, 19).

With the exception of almsgiving and the baptizing of gentile converts to Judaism (14:10), virtually all the traditional Jewish practices of Maccabean Pharisaism are mentioned. Were it not for the sweeping authority of the high priest (4:6) and the very strenuous fasting of Judith herself (8:6), a much earlier date could be assigned Judith's Pharisaism.

2. The Heroine's Character. As for religious values expressed by *the actions* of Judith, the storyteller obviously subscribed, without any reservations, to two very popular but highly debatable aphorisms, namely, "All's fair in love and war" and "The end justifies the means." He was also clearly suggesting that courage and cleverness, Pharasaic piety and ardent patriotism, undergirded by a strong faith in Yahweh, held not only Judith in fine stead but would do the same for other Jews in any time or place. Such a message helps to explain the story's popularity among Jews despite its omission from the Jewish canon.

No one doubts Judith's cleverness or courage. But many have questioned her character and conduct. To be sure, she prayed constantly and fasted frequently (8:4–8); she ate only kosher foods even in the crises of life (12:1–2, 19); she honored the memory of her deceased husband by never remarrying; and she did all the proper things right before she died (16:22–24). But in her dealings with Holofernes she was a shameless flatterer (11:7–8), a bold-faced liar (11:12–14, 18–19), and a ruthless assassin (13:7–8; "a clever and resourceful assassin" [Nickelsburg 1981: 106]).

While Bissell's indictment (1886: 163) of her is obviously expressed in Victorian language and reflects a clearly Victorian sexual morality, it still expresses adequately the thoughts and feelings of many who have either rejected the book or accepted it, albeit with reservations:

> The character [of Judith] . . . is objectionable . . . from a moral standpoint . . . Her way is strewn with deception from first to last . . . she would have been willing even to have yielded her body to this lascivious Assyrian for the sake of accomplishing her purpose . . . That God in his providence interposed to prevent such a crime, cannot relieve her of the odium attaching to her conduct . . . there are elements of moral turpitude . . .

Nonetheless, by the standards of *her* day and *her* people, Judith *was* deeply religious (8:8), one who prayed to God even as she chopped off Holofernes' head (13:7). In fact, the author of Judith could very well have described her as "the saint who murdered for her people." (The word "saint" is used here not in the sense of one who is morally "perfect" but, rather, of one who is totally dedicated to one's God.)

I. Original Language

Even if Aramaic was the original language of the Judith story (so Bruns 1954: 12–14), the LXX gives every indication of being a translation of a Hebrew text. Variant readings in the LXX point in this direction (see 8:21; 10:3; 12:16; 16:11, 15) as do certain awkward words and phrases

which are best explained by positing the misreading of a Hebrew word which resembles in appearance the one presupposed by the extant Greek rendering (see 1:8; 2:2; 3:9; 12:7; see especially Zimmermann 1938).

Then, too, a number of Hebrew idioms are rendered quite literally by the Greek, e.g., "all flesh" (2:3); "on the left," i.e., north (2:21); "a month of days" (3:10); "generation after generation" (8:32); and "to speak peace" (15:8). Finally, the ubiquitous paratactic construction (i.e., "and" followed by the verb); the infinitive absolute construction (2:13; 6:4; 7:15; 9:4); the abundance of resumptive pronouns (10:2; 16:3, 5); the superabundance of *spodra* (Gk for Heb *m'd*, "very"); instances of hendiadys (2:12; 7:18; 8:5; 9:8; 10:3; 14:10; 16:1)—these and other features regularly remind a reader that Judith is a translation from the Hebrew. (For further details, see Cowley, *APOT* 1: 244; Enslin 1972: 40–41.)

J. Author and Place of Composition

Several lines of evidence suggest that the author of Judith was a Palestinian Jew (although Luria [1975: 328–41] argues for a Syrian provenance) and probably an early Pharisee. First, the *Vorlage* of the Greek Judith was Hebrew. Second, the central events of the story (i.e., chaps. 4–16) take place in Palestine itself, where the author evidenced a better grasp of geography than he did in those areas outside Palestine (i.e., in chaps. 1–3). Third, the religious ideas of the book are Palestinian and Pharisaic, with no traces of either Sadducean (Craven 1983: 118–21; but see Mantel 1976: 60–80) or Alexandrian influence.

K. Date of Book

Judith contains basic and unmistakable Hellenistic elements. There are, for example, "details of fact" characteristic of that period, including the wearing of garlands (Jdt 3:7), the use of olive wreaths (15:13), reclining while eating (12:15), and, most important of all for the Judith story, worshiping a king as god (3:8). Institutional arrangements first characteristic of the Maccabean/Hasmonean periods are also present in the book, namely, the sweeping political and military powers of the high priest (4:6) and the supremacy of the Jerusalem Council over other Jewish councils (4:6, 8; 11:14).

Even more significant, a number of items in the Judith story are reminiscent of the general "plot," spirit, terminology, and traditions of the days of Judas Maccabeus (167–161 B.C.), who fought at Jamnia, Azotus, and Bethhoron as well as at other prominent towns mentioned in Judith. Especially striking are the parallels between the Judith story and the defeat of Nicanor, a general of Antiochus IV Epiphanes, as narrated in 1 Macc 7:43–50:

> So the armies met in battle on the thirteenth day of the month of Adar. *The army of Nicanor was crushed, and he himself was the first to fall in battle. When his army saw that Nicanor had fallen, they threw down their arms and fled. The Jews pursued them a day's journey . . . And men came out of all the villages of Judea round about, and* . . . drove them back to their pursuers . . . *Then the Jews seized the spoils and the plunder, and they cut off Nicanor's head . . . and brought them and displayed them just outside Jerusalem. The people rejoiced and celebrated that day* as a day of great gladness. And they decreed that this day should be celebrated each year on the fourteenth of Adar. *So the land of Judah had rest for a few days.* (italics added)

The central threat in the book of Judith (i.e., that a mortal king had to be worshiped as god [3:8]) is identical with that of another book composed in the days of Judas Maccabeus, namely, the book of Daniel, where in chap. 3, for instance, Antiochus IV Epiphanes, thinly veiled as "Nebuchadnezzar," demands that he be worshiped as a god.

But some other evidence in Judith suggests an even later date for the book, one in the Hasmonean period (135–63 B.C.). Inasmuch as Azotus, Scythopolis, Mount Gerizim, Shechem, and all the territory of Samaria were independent of Israel until conquered by John Hyrcanus I (135–104 B.C.), the very open and friendly attitude of Jerusalem toward Samaria and its territories (so Jdt 4:4, 6) as well as the total absence of idolatry throughout the land (so Jdt 8:18–20) strongly suggests that the Judith story received its final form sometime after 107 B.C., i.e., after the Samaritan Temple of Mount Gerizim had been destroyed and Samaritan territory had been "integrated" into the Judean state.

While one might argue that because the above-mentioned places were also part of the even larger kingdom of Alexander Janneus (103–78 B.C.) and therefore Judith could have been written in his day (so *HJP*^{2} 3/1: 218–19), it should be noted that the book does not reflect the very devisive and vicious sectarianism of Janneus' day when Pharisees and Sadducees persecuted and killed one another in great numbers. Thus, the religious views of Judith are more appropriate for the days of Hyrcanus than for those of Janneus; for they are essentially those of early Pharisaism, and they are not belligerently sectarian in character, that is, they are not anti-Sadducee or anti-Essene in emphasis.

L. Canonicity

1. Among Jews. The books of Esther and Judith each feature a beautiful Jewess whose courage and wiles save her people from certain destruction. The book of Esther mentions neither God nor any religious institutions or practices except fasting, while the book of Judith, filled as it is with allusions to God and numerous religious beliefs and practices, pulsates with the blood and spirit of Pharisaic piety. Yet it was the book of Esther, admittedly only after a long debate, that ultimately became part of the Jewish canon. For details, see ESTHER, BOOK OF.

In spite of the fact that Judith was part of the "Alexandrian Canon" (i.e., biblical and apocryphal works translated into Greek for those Jews who could not read Hebrew), there is no evidence that in Palestine Judith was ever regarded as canonical. Evidently it was not used by the Essenes at Qumran, or at least no trace of it has been found there among the Dead Sea Scrolls. The rabbis at Jamnia who established the canon of the Hebrew Bible around A.D. 90 may have rejected the book because, contrary to the prohibition in Deut 23:3, Achior, an *Ammonite*, was accepted into the Jewish religion (so Steinmann 1953: 61–62); or possibly Judith represented too "liberated" a woman for the rabbis to memorialize (so Craven 1983: 117–18); but most likely, the book ran counter to Halakah

(i.e., Talmudic Law), whereby a gentile convert to Judaism had to be circumcised *and baptized* in order to become a Jew, and Achior was not baptized (so Orlinsky 1974: 218). In any event, the story of Judith, or of a woman who did something comparable to what Judith did, has remained a popular story among Jews for the last two thousand years, as the existence of numerous Midrashim attest (see below).

2. Among Christians. Although some Greek Fathers in the Eastern Church accepted Judith as canonical (e.g., Clement of Alexandria [A.D. 150?–?215], the Council of Nicaea [325], and Junilius [fl. ca. 542]), more did not. Judith was rejected by Melito of Sardis (fl. ca. 167), Origen (185?–254), Athanasius of Alexandria (293?–373), Cyril of Jerusalem (315?–386), and a host of others. (For details on these Church Fathers, see Altaner 1960; *HJP*^{2} 3/1: 220.) In the West the situation was quite different. Apart from Jerome (A.D. 340?–420), who evidently spoke approvingly of the fact that the Jews of his day did not regard the book as canonical, western Church Fathers routinely accepted it, including Hilary of Poitiers (315?–?367), Augustine (354–430), the Council of Carthage (397), and others.

Appreciated more by those Fathers who put a high premium on celibacy (see Moore, *Judith* AB, 64), Judith did not have a book-length commentary written on it until that of Rhabanus Maurus (780?–856). The book's canonicity was not again questioned until the time of the Protestant and Catholic reformations of the 16th century. Then, following the lead of both the Jews and Martin Luther (the latter viewing it as an allegorical passion play), Protestants came to regard the book as apocryphal, while the Roman Catholic Church in its decrees at the Council of Trent in 1546 called Judith, along with other "apocryphal" books, deuterocanonical.

M. The LXX of Judith

Despite the absence of a Hebrew *Vorlage* with which to compare it, the LXX of Judith appears to be a very literal rendering of the Hebrew syntax and idiom. Then, too, many of the niceties of "good" (i.e., classical) Greek are either lacking or underrepresented. Genitive absolutes, subordinate clauses, and Greek particles are especially underused (for details, see Cowley, *APOT* 1: 244). Paradoxically, the book evidences a rich and flexible Greek vocabulary, especially in those areas of great interest to its translator, notably military terms and words for "sin" and "the Temple" (for further details, see Enslin 1972: 41). The translation was made no later than the 1st century A.D., since Clement of Rome (30?–?99) alluded to Judith in *1 Clem* 55:4–5.

N. Other Ancient Versions

The Old Latin (OL) of Judith, like other books of the apocrypha, is a translation of the LXX rather than of a Semitic text. By contrast, Jerome's Latin Vulgate (or Vg) is a paraphrase of a then-current Aramaic text and attempts to bring the OL into closer conformity with it (see Voigt 1925). His translation varies considerably from the text of the LXX. Of the 340 verses in the LXX, the Vg omits 43 verses entirely and omits large parts of 45 more. It also adds 32 verses which have no counterpart in either the LXX or the OL. Some of these variants clearly reflect Jerome's Aramaic *Vorlage* (see Moore, *Judith* AB, 95–97, 100–1). Whether that Aramaic text was based upon an older Hebrew account or upon the LXX is unclear.

The so-called ancient "Hebrew versions" of Judith are actually medieval Hebrew translations of the Latin (see Meyer 1922; Grintz 1957), not independent witnesses to another and older Semitic tradition of the Judith story (but so Dubarle 1958; 1961; 1966; 1969; 1975). Likewise, the dozen or so Midrashim ("expositions") dating to the Middle Ages (Gaster 1893–94; Dubarle 1966), seem closely related to the LXX and/or the Vg. (so *HJP*^{2} 3/1: 219ff.). The Syriac, Coptic, and Ethiopic versions of Judith, as with other books of the apocrypha, are literal translations of the LXX. Unfortunately, only the Greek (*OTG* 3/1; Hanhart 1979) and the Vulgate (*Librae Iudith,* 1950) have scientific editions of Judith.

Taken together, the preceding evidence indicates that the ancient versions of Judith, including the usually helpful Vulgate, are of little help in establishing the original text of the LXX.

CAREY A. MOORE

JULIA (PERSON) [Gk *Ioulia*]. A Roman Christian who received greetings from Paul in Rom 16:15. That Julia was the wife (or sister) of Philologus because she is coupled with him in v 15 is only a possibility. She was probably a gentile Christian. See NEREUS (PERSON). "Julia" was the Lat name of the *gens Julia* (Lampe *StadtrChr,* 66–67, 146, 152–53, 296). Women were often called by the name of their *gens* without cognomen. Three groups carried the name "Julius/Julia": the noble members of the famous *gens;* the provincials who had received Roman citizenship from Caesar or Augustus (and these provincials' descendants); and the numerous freed(wo)men of the *gens* with their descendants. The third group outnumbered the members of the first two. It is most likely, therefore, that the Christian Julia was a freed slave of the *gens Julia* or a descendant of a freed slave of this *gens.* Either way, she probably had Roman citizenship: slave masters with famous *gens* names like "Julius/ia" possessed Roman citizenship and in most cases passed it on to their slaves on the occasion of their release; the freed slaves bequeathed the citizenship and the *gens* name to their freeborn children. Slave masters of the *gens Julia* were the emperors Augustus, Tiberius, and Caligula, but many other patrons also carried the *gens* name and passed it on to their freed(wo)men (cf. e.g., Tacitus *Hist.* 1.76, *Ann.* 3.40; 15.50; 13.10). That Julia was an imperial freedwoman (cf. Phil 4:22; Christians in the emperor's household) is therefore one possibility among others.

PETER LAMPE

JULIUS (PERSON) [Gk *Ioulios*]. A centurion of the Augustan cohort who guarded Paul on his sea voyage from Caesarea to Rome (Acts 27:1–44). Julius was a common Roman name, made famous by Julius Caesar. Yet the centurion was probably not a Roman citizen, since his unit was an auxiliary cohort whose men did not receive citizenship until the completion of their 25 years' service (Webster 1985: 142–43).

During his trial before Governor Porcius Festus, Paul had appealed to Caesar, so the governor sent him to Rome under the guard of Julius and some of his soldiers. Julius treated Paul kindly on the journey, allowing him to visit friends when the ship stopped at the port of Sidon (27:3). After the vessel reached Myra, the centurion transferred Paul to another ship bound for Rome. He disregarded Paul's warning against further sailing as the dangerous winter season approached, agreeing with the ship's captain and owner to continue the voyage (27:9–11). As they sailed past Crete, a severe storm struck the ship, pummeling it for 14 days. When the ship finally ran aground on a shoal just off Malta, the soldiers planned to kill Paul and the other prisoners to keep them from escaping. But Julius stopped them, thus saving Paul's life (27:41–43). He also ordered all 276 passengers and crew to swim or float on wooden planks to shore, a plan which enabled every person aboard to be saved from drowning (27:43–44).

Scholars have questioned the historicity of various aspects of Julius' role in the entire travel narrative. Broughton (1933: 443–44) expressed surprise that a prisoner as important as Paul was not entrusted to a higher-ranking officer. Ramsay hypothesized that Julius might have been one of the *frumentarii,* a special corps of officer-couriers who acted as secret police, and could well have escorted a prisoner bound for Rome (1925: 314–15). But Sherwin-White has shown that the *frumentarii* did not begin functioning as secret police until early in the 2d century C.E.; in Paul's time they merely supervised grain shipments (1963: 109). More likely possibilities are that Julius served in a police role as a *praepositus* (chief of detachment) or else was assigned to escort Paul to Rome as part of his duties on Festus' administrative staff (Watson 1969: 145; Webster 1985: 270).

According to Conzelmann, an army centurion such as

Julius would have had little voice in the seafaring decisions affecting the ship (*Acts* Hermeneia, 216), whereas Luke portrays him conferring as an equal with the ship's captain and owner (27:9–12). Haenchen likewise discounts the possibility that Julius would have paid any attention to the opinions of one of his own prisoners such as Paul (*Acts* MeyerK, 708–11). More conservative scholars such as Marshall defend the historicity of Luke's portrayal of both Julius and Paul (*Acts* TNTC).

Julius' role in Lucan theology has not received due attention. Luke focuses more attention on Julius than any other person except Paul in the long travel narrative in Acts 27–28. While Julius does not become a Christian as does the more famous centurion Cornelius in Acts 10, he does act as the friendly gentile par excellence. By allowing Paul to visit friends in Sidon and by saving him from the threatening soldiers, Julius shows how gentiles and Christians can treat each other with mutual respect. That mutual respect pays off too, as God works through Paul's prophecy (27:21–26, 31) and Julius' commands (27:42–44) to save both the gentiles and Christians after the shipwreck. Surely Luke intends Julius' relationship with Paul to be a model for friendly, mutually beneficial relationships between gentiles and Christians.

MARK J. OLSON

JULIUS CAESAR. Perhaps the most celebrated personality of ancient Rome, Gaius Julius Caesar, as the first Roman emperor, laid the foundations of the aristocratic Roman Empire that ruled the Mediterranean area and much of Europe. The principal connected sources, apart from Caesar's own writings, are Suetonius' *Life of Julius Caesar* and Plutarch's *Life of Caesar*, though there are numerous references in contemporary and later ancient authors, since even in the ancient world Caesar was a historically fascinating figure who was seen to have instituted a major change in the Roman world. Born in 100 B.C. (or perhaps 102) of a patrician family already developing the myth of a divine origin, Caesar followed a typical "public" career in order to become involved in politics. His progress through the various positions normally held was quite regular: military and diplomatic service in the late 80s and in the 70s, quaestor (financial assistant) in 69 or 68, aedile (superintendent of public buildings and works) in 65, and praetor (administrator of justice) in 62. In addition, in 63 he was elected by popular vote to the life position of *pontifex maximus*. At the same time he was building his political influence, becoming involved in a number of schemes (including suspicion of involvement in the "conspiracy" led by Catiline). In some of these he was linked with the rich and powerful senator M. Licinius Crassus, while his political activity showed an increasingly popular line. Following his praetorship, Caesar was made governor of the province of Further Spain where he first displayed his skill as a military commander.

On his return from Spain Caesar joined an informal political alliance (the so-called "First Triumvirate") with Pompey and Crassus (since all three were having requests blocked by a group of conservatives in the senate) to secure the consulship of 59. Caesar's daughter Julia was married to Pompey to cement the alliance. Their opponents got Bibulus in as Caesar's colleague, and Caesar had to use force to push through legislation to satisfy the coalition's various requests. Caesar received a special command of several provinces with a large army for 5 years, but it was mainly in Transalpine Gaul that he spent the next 9 years (58–50) adding large areas to the Roman empire. The campaigning was sometimes difficult, and occasional atrocities were committed against defeated native tribes, but in the end Caesar achieved an important conquest. The campaign also secured for him a loyal and seasoned army and a large amount of booty (which he used to pay off his enormous debts and to distribute as bribes in order to broaden his political influence).

Toward the end of his command in Gaul, the die-hard conservatives in the senate, afraid of Caesar's rising power, threatened to prosecute him for the illegalities of his first consulship and so bring about his political extinction. They won Pompey over to their side, even though he had renewed his political alliance with Caesar in 56. The ambition for power which each had meant that they would almost inevitably come into collision; the deaths of Julia in 54 and Crassus in 53 widened the breach. To protect his own position, Caesar crossed the river Rubicon (the border of his province) and invaded Italy on January 10, 49.

With his more seasoned army Caesar soon gained control of Italy, leading Pompey to withdraw to Greece with many of the senators. Caesar turned first to defeating forces loyal to Pompey in Spain, before crossing to Greece where he eventually defeated Pompey at Pharsalus in August 48. He pursued Pompey to Egypt but arrived to find his opponent had already been murdered by the local ruling dynasty in an attempt to gain his favor. With some difficulty due to lack of troops, Caesar then spent the winter extricating himself from a domestic quarrel in Egypt which ended with the establishment of Cleopatra, now his mistress, on the throne. He then defeated a Pontic army, which had invaded Asia Minor, at Zela in August 47. He returned to Rome but in January 46 had to go to N Africa where he conducted a 4-month campaign against the Pompeian forces assembled there, which ended with a major battle at Thapsus. The wars now seemed over and Caesar returned to Rome to celebrate a fourfold triumph for his Gallic, Alexandrian, Pontic, and African victories. But in 45 he had to fight his hardest campaign against the remnants of the Pompeian forces led by Pompey's sons in Spain, culminating in victory at Munda.

During these years Caesar sponsored an extensive and diverse range of legislation, but it is not clear whether this program was merely haphazard and incomplete, or whether Caesar had some long-term plan to alter the

whole face of the Roman constitution. There is controversy too over Caesar's personal intentions. He continued to use the titles and powers of the republican constitution, since they cast a veil of legality over his position and actions. However, there was an unusual accumulation of offices, the dictatorship particularly being used in new and abnormal ways (culminating in the grant to him of the dictatorship for life early in 44). In combination with unprecedented and highly extravagant honors, these offices showed that Caesar was concentrating power in his own hands, perhaps because his desire and flair for administrative efficiency saw some sort of monarchy as the only practical solution to the problems which had faced the republican form of government for the last 100 years. At the time of his death Caesar was planning campaigns against Parthia and Dacia; they may have been partly an excuse to avoid a decision about what to do with the state.

Caesar also received emblems of royalty: a purple robe, statues, a gilt chair in the senate. There were some abortive attempts to offer him a crown, but these were not pressed due to the unpopularity of the idea of monarchy among the Romans. Allied to the question of monarchy is the question whether Caesar wished to be deified. There were some signs, including a senatorial decree for a temple and *flamen* (priest) for him. This suggests that full deification was planned, but the decree was not implemented until after his death.

Caesar's often-publicized "clemency" did much to conciliate the aristocracy. But his unusual powers and excessive honors, his disregard for republican procedure, the suspicion that he wished to be *rex* (king), alienated even men of his own party and he was assassinated on the Ides (15th) of March 44 in a conspiracy led by Brutus and Cassius. His death left a vacuum until his grandnephew Octavian, adopted as his son in his will, emerged to take up where his adoptive father had left off.

Caesar was married three times, but there were scandals throughout his life linking him with persons of both sexes; of his numerous mistresses the most famous were Servilia, the half-sister of Cato and mother of Brutus, and Cleopatra. As a person Caesar was extravagant, versatile, affable, and highly cultured. As a commander he had the ability to grasp the right moment for action and to gain the loyalty of his men. As an orator he was reputed to be second only to the great Cicero. As a writer his style was lucid and compressed, free of rhetoric, with simple but well-chosen vocabulary. His writings, in the new genre known as *commentarii,* include seven books on his Gallic campaigns, and three books on the civil wars; while they are masterly descriptions of warfare, they also served the purpose of propaganda for Caesar's achievements.

BRUCE A. MARSHALL

JUNIAS (PERSON) [Gk *Iounia*]. The only woman who is called an "apostle" in the NT (Rom 16:7). She was born a Jew, and is closely associated to Andronicus. Her name was the Lat name of the *gens Junia* (see the material in Lampe 1985 and *StadtrChr,* 66–67, 146–47, 152–53, 296). Women were often called by the name of their *gens* without cognomen (similar examples are Mary [Rom 16:6] and Julia [Rom 16:15]). Two groups carried the name of the *gens Junia:* the noble members of the famous *gens,* and the freed(wo)men of the *gens* with their descendants. The second group outnumbered the first. The chances therefore are that the Christian Junia was a freed slave of the *gens.* Either way, she probably had Roman citizenship: slave masters with famous *gens* names like "Junius/ia" possessed Roman citizenship and in most cases passed it on to their slaves on the occasion of their emancipation; the freed slaves bequeathed the *gens* name and the citizenship to their freeborn children. Without exception, the Church Fathers in late antiquity identified Andronicus' partner in Rom 16:7 as a woman, as did minuscule 33 in the 9th century which records *iounia* with an acute accent. Only later medieval copyists of Rom 16:7 could not imagine a woman being an apostle and wrote the masculine name "Junias." This latter name did not exist in antiquity; its explanation as a Greek abbreviation of the Latin name "Junianus" is unlikely.

PETER LAMPE

JUSHAB-HESED (PERSON) [Heb *yûšab ḥesed*]. A son of Zerubbabel (1 Chr 3:20). The verse here preserves a second group of Zerubbabel's offspring, distinct from those in v 19. It has been suggested that this group of children was listed separately because they were born after the return to Palestine (Williamson *Chronicles* NCBC, 57; Rudolph *Chronicles* HAT, 29). The name, which may reflect the hopes of the time, means, "kindness will be returned." The Greek codex Alexandrinus renders the name *Asobaesd* (= Heb *yāšôb (ha)ḥesed*).

RUSSELL FULLER

JUST, JUSTICE. The English language does not distinguish between the two Hebrew terms *mišpāṭ,* "justice," and *dîn,* "judgment." The substantive *mišpāṭ,* like the root *špṭ* from which it is derived, is multifarious in meaning. In the Mari documents, the meanings of the root *špṭ,* according to various contexts, include "to rule," "to govern," "to command [an army]," "to judge [in a forensic sense]," "to arbitrate [in a dispute]," "to warn," "to punish," and "to vindicate." Consequently, the substantive *mišpāṭ* yields a variety of meanings such as "justice," "judgment," "rights," "vindication," "deliverance," "custom," "norm." Although

some contexts of *mišpāṭ* show that the root *špṭ* and the substantive *mišpāṭ* were also used in a forensic sense, there is strong evidence that attests that originally the substantive *mišpāṭ* referred to the restoration of a situation or environment which promoted equity and harmony *(šālôm)* in a community. When referring to purely legal matters, the Semitic root normally used is *dyn* ("to judge") and the substantive *dîn* referred to a decision reached in a legal court. In several biblical passages, however, both *dyn* and *špṭ* are used in parallel contexts which present them as synonyms (1 Sam 24:15; Jer 5:28; 21:12; Isa 3:13–14; Prov 31:9; Ps 7:9; 72:1–4). Similar usage of *špṭ* is also reflected in the Ugaritic literature with reference to the gods Baal, Yamm, and Mot, and to the legendary kings Kirta and Aqhat. The usage of the root *špṭ* in the OT is therefore greatly elucidated by a comparison with other Semitic languages. To arrive at the best meaning of justice in the OT, it is therefore important to pay close attention to every context in which it is used.

A. God as Judge and Guardian of Justice

The Israelites, like other Semitic people in the ANE, regarded the deity as the Judge of the whole earth (Gen 18:25). God's universal judgeship was based on the fact that it was He who created the world and established equity and justice (Ps 99:1–4). He was thus regarded as the source and guardian of justice because justice and righteousness are his very nature and attributes (Ps 97:2). In several biblical passages, the two terms "righteousness" *(ṣĕdāqâ)* and "justice" *(mišpāṭ)* are used synonymously (Amos 5:24; Gen 18:19). Justice was central among the Israelites because they were very much concerned with social relationships among themselves as a people covenanted to God and also among the nations surrounding them. In this connection, as Judge *(šôpēṭ)*, God would administer justice by punishing those whose conduct made the lives of others very difficult in the world (Ps 94:2–4). God was thus summoned to judge the nations for their disregard of justice in their social dealings with other people (Ps 9:7–9). It is not piety which God required of humans, but the practicing of justice and righteousness (Amos 5:21–24; Mic 6:6–8). In the OT, God's justice is manifested in his retribution to all people and nations according to their just deserts. Those who felt unjustly treated by others in social, economic, and political relationships summoned God to judge them, that is, to do them justice by saving them from their enemies or oppressors (Ps 7:6–11). In several other texts in the book of Psalms, when the Israelites summoned God to judge *(špṭ)* them, they were calling him to avenge them of their enemies simply as vindication for their own uprightness (Ps 17:2; 26:1–3; 28:3–4). It appears that the Israelites based God's retributive justice on the principle of judgment by ordeal. In this type of judgment, the innocent, that is, the righteous *(ṣaddîq)*, would be vindicated while the wicked would be requited according to their unrighteousness. This is best illustrated in the quarrel between the Israelites and the Ammonites. Jephthah, as judge of Israel, tried to prove the Israelites' innocence to the king of the Ammonites. When his explanation of the situation failed to convince the king of the Ammonites, Jephthah summoned Yahweh, the Judge *(haššôpēṭ)*, to decide the case between the Israelites and the Ammonites. Military victory by the Israelites was construed to mean vindication for the Israelites' innocence while a decisive defeat inflicted on the Ammonites was seen as God's judgment *(mišpâṭ)* and punishment for the Ammonites' unprovoked aggression (Judg 11:27; cf. Gen 16:5).

B. Fairness of God's Justice

The Israelites expected God's justice to be fair because it issued from God who was a righteous Judge (Ps 7:11; 9:8; 119:137; 145:17). Those who were appointed to the office of judge *(dayyān* or *šôpēṭ)* or magistrate were expected to reflect God's holy nature (Exod 18:21). Consequently, when executing justice, the judges *(šôpĕṭîm)* were to be absolutely fair, realizing that they were acting as agents or deputies of the holy God (Deut 1:16–17; cf. Exod 18:21–23). In this light the so-called judges *(šôpĕṭîm)* of the book of Judges were appointed by God to act for him as administrators of justice in two ways. In a military emergency, they liberated the Israelites by commanding military campaigns against the aggressive enemies who threatened their freedom and peace *(šālôm)*. In peacetime, the judges administered justice by deciding disputes arising among their people (Judg 4:4–5). That these judges were just and righteous people is implied in the Deuteronomistic summary statement that when they died, the children of Israel forgot the way of the Lord (Judg 2:17–19).

C. God's Justice in Relation to the Poor

In several biblical passages, particularly in the Psalms and the Prophets, God is portrayed as having a special concern for the poor, particularly the widow, the fatherless, and the oppressed (Ps 10:17–18; 82:1–8; cf. 109:16). When they summoned God to judge them, the poor and oppressed did not expect him to reward them with material benefits beyond those they were normally entitled to in order to lead a normal good life. When they sold their produce and services, they expected a fair deal from the merchants (Amos 2:6–7). Ownership of land and property, freedom and security, constituted their inalienable human rights endowed upon them by God, their creator. For this reason, passages which refer to justice *(mišpāṭ)* of the poor are in actual fact referring to the rights of the poor (Jer 5:28). Therefore, justice *(mišpāṭ)* does not solely refer to moral norm, but also refers to basic human rights. For this reason, when the prophet Amos refers to the poor as the righteous *(ṣaddîq)*, he is referring to their being on the right with respect to their dispute with the oppressors over the infringement of their basic rights. It was therefore natural that the people oppressed by the economic, social, and political systems and others, such as the sojourners, who experienced some injustices, should appeal to God to intervene in order that their rights *(mišpāṭ)* might be restored (Ps 146:7–9; cf. 119:153–59). Since God requites all people according to their just deserts, those who felt innocent of any wrongdoing against other people, and who had not transgressed God's law, summoned God to test, try, or examine them to verify their uprightness in order that he might judge *(špṭ)* them accordingly (Ps 139:23–24). In making this summons, God was invoked to reward the wicked according to their wickedness and the upright in heart according to their righteousness (Ps 94:

1–3). God judges in order to restore the lost rights of the oppressed (Ps 76:9). He establishes justice in the world by eliminating inequalities (Ps 113:4–9). God's justice aims at creating an egalitarian community in which all classes of people maintain their basic human rights. See also JUDGE, JUDGING; POOR, POVERTY.

JUSTIFICATION. A term that describes the event whereby persons are set or declared to be in right relation to God. The word is often used to summarize the central message of the gospel proclaimed by Paul. Despite its historic importance in Christian dogmatic tradition, however, especially in Protestantism, the noun "justification" rarely appears in the Bible. The classic Pauline statements concerning the justification of human beings (e.g., Gal 2:15–16; Rom 5:1) characteristically employ forms of the verb *dikaioun* ("to justify"). The noun *dikaiosynē,* which appears frequently in Paul and elsewhere in the NT, is more appropriately translated by the word "righteousness" or, as in common classical and Hellenistic usage, "justice." Strictly speaking, only in Rom 4:25 and 5:18 does the word *dikaiōsis* ("justification") appear. In Rom 5:16 the noun *dikaiōma,* here set in opposition to *katakrima* ("condemnation"), probably means "pronouncement of acquittal." See also the RIGHTEOUSNESS articles.

G. Conclusion

A. Terminology

Both in the OT and in the NT the terms "just, justification, justify" usually translate exactly the same linguistic stock represented elsewhere in English translation by "righteous, righteousness." The English language regrettably lacks a verb etymologically akin to "righteousness." (Scholars such as Grobel and Sanders have sought to remedy the deficiency by exhuming an old Anglo-Saxon verb, "to rightwise" [= to justify, set right], but this proposal has not elicited enthusiastic acceptance.) Consequently, English translations of the Bible are generally unable to convey the close linguistic linkage between "the righteousness of God" and the justification of persons. The difficulty is illustrated by the RSV translation of Rom 3:26: "It was to prove at the present time that he [God] himself is righteous [*dikaion*] and that he justifies [*dikaiounta*] him who has faith in Jesus." This is not merely a Pauline pun; the verbal connection reflects an underlying theological coherence. In order to grasp this coherence and to appreciate the distinctive early Christian development of this complex of ideas, it is necessary to trace the functions of "righteousness/justification" language in the OT and in Jewish tradition.

B. Hebrew Scriptures and LXX

"Justification" as a theological concept has its metaphorical roots in legal language. To be "justified" is to be proved right or innocent before the bar. In the world portrayed by Israel's Scriptures, legal judgment is executed within the framework of the covenant with Yahweh; consequently, "righteousness" (*ṣĕdāqâ,* rendered by the LXX as *dikaiosynē*) in this context is a relational term which means faithful adherence to the structure of obligations established by the covenant. An excellent illustration of this is provided by Gen 38:1–26: Tamar, pretending to be a prostitute, tricks Judah into fathering her sons, but is pronounced "more righteous" than he, because he has defaulted on his obligation to her (cf. Deut 25:5–10). The oblique phrasing of Gen 15:6 (Abraham's trust in God's promise was "reckoned" as righteousness) may reflect the writer's sensitivity to the anomaly here: despite the absence of any explicit covenant relationship at that point in the narrative, Abraham is granted a standing before God normally ascribed only to participants in the Mosaic covenant. (Paul was later to capitalize upon the scrupulous turn of phrase: see Rom 4:3–8.)

Of course, precisely because "righteousness" characterizes faithful adherence to the covenant relationship, the term can be predicated of Yahweh no less than of the human covenant partners. God's righteousness is manifest in his resolute faithfulness to the covenant with Israel. Indeed, in the lament Psalms, the psalmist can frequently appeal to God's righteousness as a way of invoking the Deuteronomic covenant promises: if God is truly righteous, he will surely confer the promised deliverance and blessing (cf. Ps 31:1; 71:2). In some cases, as in Psalm 143, it is suggested that God, in his righteousness, will (or should) come to the aid of Israel on the grounds of the covenant relationship, apart from any consideration of Israel's worthiness (see esp. vv 2, 11–12); because the honor of God's name is at stake, he will not only judge and punish but also "vindicate his people" (Ps 135:13–14; cf. Ps 43:1). Both in intercession and in praise, *ṣĕdāqâ/dikaiosynē* can become a summary description of God's mighty salvific deeds on Israel's behalf (Ps 71:15–19; 98:2). Thus, the term characterizes not merely an abstract attribute of God but an aspect of the divine character made manifest in the action of claiming and delivering Israel.

Under the circumstances of the Exile, however, claims concerning God's unwavering faithfulness to the covenant became intensely problematical. How can God be described as righteous if he abandons Israel to her enemies? Particularly in Deutero-Isaiah, God's righteousness becomes the ground and content of an eschatological hope for the setting right of human historical experience: despite present appearances to the contrary, God will reveal his righteousness in a way which will vindicate Israel's trust in him, thus leading all nations to acknowledge his cosmic lordship. (Cf. Isa 51:4b–5 [LXX]: "For the Law will go forth from me, / And my judgment will go forth as a light to the nations. / My righteousness draws near quickly, /

And my salvation will go forth as a light, / And in my arm will nations hope.") In contexts such as these, the idea of God's righteousness becomes strongly associated with the ideas of deliverance and *vindication;* the latter notion is further reinforced by the LXX rendering of *ṣedeq/ṣĕdāqâ* as *dikaiosynē.* In Isa 50:7–9, for example, a passage full of legal imagery, the prophet describes God as "he who vindicates me" *(ho dikaiōsas me)* before all accusers and adversaries.

C. Qumran

The Qumran literature provides evidence for the further development of the concept of God's righteousness/justification within an apocalyptic sectarian form of Judaism. A much-discussed passage from the community's Manual of Discipline describes the hope of God's righteousness in terms reminiscent of the canonical Psalms but with heightened emphasis on the idea that God's righteousness will effect forgiveness and cleansing of sins.

> As for me, my judgment [*mišpāṭî*] is with God.
> In his hand are the perfection of my way
> and the uprightness of my heart.
> He will wipe out my transgression through his righteousness [*ṣidqôtāw*] . . .
> As for me, if I stumble, the mercies of God shall be my eternal salvation.
> If I stagger because of the sin of flesh,
> my judgment [*mišpāṭî*] shall be
> by the righteousness of God [*ṣidqat ʾēl*] which endures for ever.
>
> (1QS 11:2–3,12)

Some translations of this text have attempted to underscore its "Pauline" flavor by translating *mišpāṭî* as "my justification." This interpretation is probably slightly misleading: more to the point is the recognition that the passage portrays God's righteousness as the ground of hope for a speaker who acknowledges his own sinfulness. There is no reason to suppose that this Qumran conception had a direct influence on the formation of early Christian teaching about justification; rather, 1QS bears witness to the ongoing vitality within Judaism of the belief in God's righteousness as the basis for Israel's hope of vindication. Here again the expectation of justification is closely bound to the idea of covenant. The people of Qumran anticipate justification precisely because they participate in a community which seeks to live in faithful adherence to a particular understanding of God's covenant with Israel; consequently, they expect the God of the covenant to vindicate them in the final judgment.

D. Early Christian Traditions

The earliest Christians formulated their teaching about justification and about the righteousness of God in a linguistic and theological environment conditioned decisively by Jewish scripture and tradition. Consequently, the Christian understanding of justification represents a development of Jewish tradition rather than an innovation. Indeed, the traditions of Jesus' teaching preserved in the Synoptic Gospels use the language of justification infrequently; where these traditions do speak of "being justified," they typically carry the basic sense of being "proved right," as in the proverbial saying, "Wisdom is justified by her children" (Luke 7:35; cf. Matt 11:19: ". . . by her works"!). Two Lukan passages (Luke 10:29; 16:15) portray the desire for justification as a superficial seeking for human approval. In the parable of the Pharisee and the tax collector, on the other hand, Luke uses "justification" language with something of its characteristic OT covenant resonance: the tax collector "went down to his house justified" in the sense that he stood in right relation to God. Matthew 12:37 offers the single instance in the Gospels of an eschatological referent for justification language: "I tell you, on the day of judgment men will render account for every careless word they utter; for by your words you will be justified, and by your words you will be condemned." Here the root imagery of the law court is projected into a vision of final divine judgment (cf. Matt 25:31–46). In none of this material does "justification" receive an interpretation different from conventional Jewish usage.

Arguably the earliest distinctively Christian usage of language about justification centers on Jesus as "the Righteous One" *(ho dikaios),* the messianic figure who is unjustly rejected and killed (Acts 3:14; 7:52) but subsequently vindicated *(edikaiōthē)* by God (1 Tim 3:16) through the resurrection. Such christological conceptions are a natural outgrowth of the earliest Church's hermeneutical convention of interpreting the lament Psalms as prophetic prefigurations of the Christ's passion; the result is that the traditional hope for God's vindication of Israel becomes focused upon and enacted through the cross and resurrection. Within this framework of thought, Jesus' death was interpreted as having a vicarious sacrificial significance: "For Christ also died for sins once for all, the Righteous One for the unrighteous [*dikaios hyper adikōn*]" (1 Peter 3:18). While these formulations appear in texts written later than the Pauline epistles, in each case there is good reason to think that they preserve common early Christian tradition. (For discussion of the idea of Jesus' death as saving event in the context of Jewish thought, especially *4 Maccabees,* see Williams 1975.)

E. Paul

In the Pauline letters, there are a number of passages often regarded as citations of pre-Pauline liturgical or confessional traditions that refer to Christ as "our righteousness" (1 Cor 1:30) or to his death as a vicariously efficacious one whereby "we might become the righteousness of God" (2 Cor 5:21) or to baptism as the instrumentality through which "you were washed, you were sanctified, you were justified [*edikaiōthēte*] in the name of the Lord Jesus Christ and in the Spirit of our God" (1 Cor 6:11). Whether these formulations are pre-Pauline or not, they bear witness to the same sphere of Jewish-Christian theological conceptualities reflected in other NT writings: justification is interpreted as God's act of deliverance wrought through Jesus Christ, the Righteous One, whose sacrificial death avails for the salvation of the covenant people. This tradition is epitomized in the confessional formula of Rom 4:25, which (probably echoing Isaiah 53) acclaims "Jesus our Lord, who was put to death for our trespasses and raised for our justification [*dikaiōsis*]." This

formula, by connecting justification with resurrection, underscores the connotation of "vindication" present in the terminology. None of these passages makes the characteristically Pauline linkage between justification and faith, nor is there any polemical antithesis here between Christ and the Torah.

Even the doctrine of justification by faith is presented by Paul as a commonly held conviction of early Jewish Christianity. In his account of the confrontation at Antioch, Paul represents himself as having said to Peter, "We ourselves, who are Jews by birth and not gentile sinners, since we know that a person is not justified by works of the Law but through the faith of Jesus Christ, even we have put our trust in Christ Jesus in order that we might be justified out of the faith of Christ and not out of works of the Law, because out of works of the Law 'no one shall be justified' " (Gal 2:15–16, citing Ps 143:2). According to Paul's account of the matter, all parties were agreed on the affirmation that persons are justified *dia pisteōs Iēsou Christou* ("through the faith of Jesus Christ": on the translation of this phrase, see below); the controversy at Antioch concerned the social and ritual implications of this confession. Whether Paul's claim is in fact true or whether it is a rhetorical tactic is difficult to say. Early Christians would generally have shared Paul's belief that Christ's death and resurrection were the basis for justification (see the discussion of pre-Pauline formulations above); it seems likely, then, that Paul's original contribution to the discussion was his inference that this truth now abrogated any necessity for gentile converts to be circumcised and to obey the Jewish dietary laws. Consequently, the doctrine of justification by faith became Paul's theological warrant for an understanding of the Church as a new people of God in which Jews and gentiles could be united in table fellowship (cf. Dahl 1977).

The precise relation between faith and justification is a difficult exegetical issue. Traditionally, Paul's expression *dia/ek pisteōs Iēsou Christou* in Gal 2:16 (cf. 3:22; Rom 3:22, 26) has been understood to mean "through believing in Jesus Christ" (objective genitive). The texts would then establish a dichotomy between two different modes of human religious disposition: seeking justification through "works of the Law" versus through believing in Jesus Christ (cf. also Rom 4:1–8 for the antithesis between "works" and "faith"; the dichotomy would have appeared odd to Jewish Christians, as attested by James 2:18–26). A number of recent studies (Williams 1980; 1987; Johnson 1982; Hays 1983; 1987) have argued instead for an interpretation of *dia/ek pisteōs Iēsou Christou* as "through Jesus Christ's faithfulness" (subjective genitive). On this reading, texts such as Gal 2:16 would juxtapose human striving to Christ's accomplished act of obedient self-sacrifice. This interpretation would be consistent with the view of justification articulated in Rom 5:18–19: "Then as the trespass of one [Adam] led to condemnation for all, so also the righteous act [*dikaiōma*] of one [Christ] leads to the justification [*dikaiōsis*] of life for all. For just as by the disobedience of one [Adam] many were made sinners, so also by the obedience of one [Christ] will many be made righteous [*dikaioi*]." Here Christ's act of obedience is explicitly interpreted as vicariously efficacious for the justification of "many." The differences between these interpretations of "faith of Jesus Christ" should not be exaggerated: both stress the death and resurrection of Jesus as the decisive act of God upon which justification depends, and both agree in regarding trust/faith as the appropriate response to this divine act. Furthermore, on either reading, Paul emphatically dissociates justification from the Law, which finally has no power to give life (Gal 3:21), and associates it with a relation to Jesus Christ. To do otherwise, in Paul's view, would be to deny the efficacy or necessity of Christ's death, and thus to "nullify the grace of God; for if righteousness [*dikaiosynē*] were through the Law, then Christ died to no purpose" (Gal 2:21).

In Galatians, confronting an acute pastoral crisis, Paul pushes this line of theological reflection to radical conclusions about the incompatibility of Torah and Christ: ". . . if you receive circumcision, Christ will be of no advantage to you . . . You are severed from Christ, you who would be justified by the Law; you have fallen away from grace" (Gal 5:2, 4). In the subsequent letter to the Romans, however, he steers a more moderate course, developing other lines of thought already foreshadowed in Galatians (cf. Gal 3:8–9; 3:23–25; 4:21): though the Law has no power to accomplish the justification of the ungodly, it already points toward God's ultimate purpose, which has now been fully revealed in the gospel. The Law bears witness that God always intended to reveal his righteousness through Jesus Christ in such a way that Jews and gentiles alike will experience salvation, just as Isaiah prophesied (Rom 1:16–17, 15:8–12). Thus, Paul's development of "the righteousness of God" in Romans deliberately picks up motifs from Deutero-Isaiah, portraying God's righteousness as his covenant-faithfulness, which manifests itself in the act of eschatological deliverance. This is the meaning of Paul's claim that although "the righteousness of God has been manifested apart from Law" (i.e., in Jesus Christ), nonetheless "the Law and the prophets bear witness to it" (Rom 3:21–22), as the story of Abraham illustrates (Romans 4).

Once it is recognized that "the righteousness of God" in Romans is deliberately explicated in terms of this OT covenant conceptuality, it becomes apparent that the term refers neither to an abstract ideal of divine distributive justice nor to a legal status or moral character imputed or conveyed by God to human beings. It refers rather to God's own unshakable faithfulness. (Piper [1983: 203] interprets God's righteousness as an "unswerving commitment always to preserve the honor of his name and display his glory.") Insofar as "righteousness" may be ascribed to the human beneficiaries of God's grace (cf. passages such as Phil 3:9; Rom 9:30–10:4), this righteousness should be interpreted primarily in terms of the covenant relationship to God and membership within the covenant community.

In view of these exegetical observations, the traditional debate in Christian theology over whether justification is "forensic" or "ethical" demands reformulation. "Righteousness" refers to God's covenant-faithfulness which declares persons full participants in the community of God's people. This declaration has a quasi-legal dimension, but there is no question here of a legal fiction whereby God juggles his heavenly account books and pretends not to notice human sin. The legal language points rather to the formal inclusion of those who once were "not my people" in a concrete historical community of the "sons of the living God" (Rom 9:25–26). (Justification is only one of the

metaphors that Paul can use to describe this act of inclusion by grace; elsewhere he can speak, for example, of "adoption," as in Gal 4:5 and Rom 8:15.) On the other hand, though the gift of incorporation into this community neither presupposes a prerequisite moral uprightness on the part of the recipients (Rom 5:6–11) nor offers a magical transformation of moral character, participation in the covenant community carries with it a very definite normative demand for radical obedience to God (Rom 6:1–19; 12:1–2), because the very purpose of the covenant community is to manifest God's righteous design for his human creatures.

This interpretation of justification as God's act of claiming and vindicating a covenant community also precludes the individualistic error of treating justification as the believer's personal experience of forgiveness and deliverance from a subjective sense of guilt (Stendahl [1976] has stressed the absence of these categories in Paul). Paul, in Romans, does not begin with a human predicament and then present justification as the solution to it (cf. Sanders 1977; 1983). Rather, he assumes as a starting point the kerygmatic proclamation that God has acted to justify Jews and gentiles alike on the same ground. This proclamation raises the issue of God's righteousness as a theological problem. If God justifies people apart from Torah, does that mean he has capriciously abandoned his special covenant relationship with Israel? The problem is one of theodicy: "What shall we say, then? Is there injustice on God's part?" (Rom 9:14). The bulk of Romans then is a defense of God's righteousness, as assertion that God is faithful to his promises precisely in the act of justifying people through Jesus rather than through Torah. Thus, Romans deals with "justification" on two levels: (1) the "justification" of persons who are placed in right covenant relation to God through God's act in Christ and their response to it in faith; and (2) the "justification" of God's integrity in so acting.

F. Other NT Writings

In the rest of the NT, "justification" plays a relatively minor role. As the brief survey (above) of justification in the traditions of Jesus' teaching suggests, none of the gospel writers emphasizes justification as a major theological motif. The vocabulary of righteousness/justification is negligible in John (cf. John 16:8, 10 for the only instances) and altogether absent from Mark. Matthew has several sayings, especially in the Sermon on the Mount, that portray righteousness *(dikaiosynē)* as the goal of human hope or conduct (5:6, 10, 20; 6:1, 33; cf. 3:15). Some of these texts, in which righteousness is closely identified with "the kingdom of God" (5:6, 10; 6:33), might plausibly be interpreted in a manner consistent with Paul's understanding of the eschatological manifestation of the righteousness of God, but others (5:20 and 6:1) clearly refer to human moral performance. Luke's parable of the Pharisee and the tax collector (18:9–14) appears to reflect a "Pauline" understanding of justification, but Luke's failure to develop this theme in Acts suggests that the real point of the parable is the contrast between pride and repentance rather than between "justification by works" and "justification by faith." The only reference in Acts to justification appears in Paul's synagogue speech in 13:38–39: "Through this man forgiveness of sins is proclaimed to you, and by him every one that believes is freed [*dikaioutai*] from everything from which you could not be freed [*dikaiōthēnai*] by the Law of Moses." Here the connection with belief and the antithesis to the Law are faithful echoes of Pauline theology, but the use of *dikaioun* with *apo* (literally "justified from") is peculiar, and the link with "forgiveness of sins" is characteristically Lukan. The effect of this single, rather awkward, reference is simply to highlight the complete absence of justification as a theme of Christian proclamation elsewhere in Acts.

In the later NT epistles, there are two important passages that reflect a continuing concern about the Pauline formulation of the doctrine of justification. Titus 3:5–7 is a full and emphatic restatement of the doctrine, linking justification more directly with baptism than Paul did (but cf. 1 Cor 6:11) and reaffirming the Pauline denial of works as the means of justification: ". . . not because of deeds done by us in righteousness, but in virtue of his own mercy . . . which he poured out upon us richly through Jesus Christ our Savior, so that we might be justified by his grace and become heirs in hope of eternal life." The diction is more inflated than Paul's, and nothing is said here about faith, but the overall position is clearly a deft summary and extension of Paul's characteristic teaching on justification, preserving the Pauline heritage in a later historical setting.

The Letter of James, on the other hand, contains a notorious passage (2:14–26) which has often been read as a frontal assault on the Pauline doctrine of justification by faith: "You see that a person is justified by works and not by faith alone" (2:24). Briefly, it must be maintained that the understanding of "justification by faith alone" against which this polemic is aimed represents a caricature of the Pauline position (cf. Reumann 1982). Paul, like James, was insistent that faith is manifest in active obedience, and (interestingly) Paul never uses the expression "justification by faith *alone*" (*sola fide* is a slogan of the Reformation, not of Paul). The teaching of James is a corrective against a distortion that Paul himself vehemently forswore (Rom 3:8; 6:1–2). We will probably never know whether such a position was actually championed by a "hyper-Pauline" antinomian wing of the Pauline school (certainly the Pastorals represent a quite different direction of development of the Pauline tradition) or whether James has constructed a rhetorical "straw man," representing his own misinterpretation of the Pauline tradition. In either case, the conflict between James and Paul on "faith and works" is more a matter of terminology than of theological substance. If there is a material difference between the two writers, it is to be found rather in the fact that James' remarks never in any way link justification to God's redemptive act in Christ. See also JAMES, EPISTLE OF.

G. Conclusion

"Justification" has its roots in prophetic interpretation of God's covenant with Israel. Particularly in Deutero-Isaiah, God's righteousness provides the grounding for the hope of a future event whereby God will not only demonstrate his faithfulness to Israel but also extend salvation to the gentiles. Though Jesus apparently did not adopt this motif as a central theme of his preaching, the early Jewish-

Christian communities began to interpret Jesus' death and resurrection as the event through which this eschatological covenant promise was brought to fulfillment. Paul placed the idea of the righteousness of God near the center of his own theological reflection and stressed its inclusive dimension: God's eschatological righteousness revealed in Jesus Christ necessarily entails the justification of Jew and gentile on equal terms. Justification, consequently, cannot be abstracted from the formation of the "Israel of God" (Gal 6:16), a palpable historical community in which Jews and gentiles bear witness together to the grace of God. Whatever the reason (and many have been suggested), Paul's powerful and highly nuanced understanding of justification does not appear to have been widely influential in the early Church. Only much later was it "rediscovered" through hermeneutical innovations that allowed Augustine and Luther to reinterpret it for their own times as an antidote to Pelagianism and as a word of reassurance to the terrified introspective conscience (cf. Stendahl 1976). Historical criticism suggests, however, that Paul's understanding of justification must be interpreted resolutely in terms of OT affirmations of God's faithfulness to the covenant, a faithfulness surprisingly but definitively confirmed through Christ's death and resurrection (Rom 15:8). This reading of justification in Paul opens the possibility of new hermeneutical applications in a century haunted anew by questions of theodicy.

RICHARD B. HAYS

JUSTIN MARTYR (PERSON). Justin Martyr was the most significant of the 2d-century apologists for Christianity. He was born in Samaria, lived for a time at Ephesus, and finally conducted a training school for Christians at Rome until his martyrdom about 165. His most famous pupil was the Syrian Tatian, who later modified his teaching and left the Church.

Justin's first work seems to have been his treatise *Against All Heresies,* opposed to the Samaritans Simon Magus (Acts 8?) and Menander, as well as Marcion. See MARCION, GOSPEL OF. Later he composed his *Apology* now divided into two parts. The work is addressed to Antoninus Pius and his two adopted sons. Its date may be given by Justin's insistence on eternal fire for the wicked, for in the year 156 Polycarp of Smyrna, favorably received at Rome the year before, was burned alive after threatening his judge with "eternal fire." Justin's essay begins with the demand to investigate accusations and explains what Christians believe and do. The so-called "second apology" looks like a continuation of the first, perhaps with more emphasis on the philosophy espoused by the future emperor Marcus Aurelius.

The *Apology* begins with a refutation of anti-Christian slanders and a description of Christian moral teaching. It continues with a lengthy discussion of OT prophecy as fulfilled in Christ, with remarks about philosophy along the way. It ends with fairly full and important descriptions of baptism and eucharist (filling in the gap between the *Didache* and Hippolytus) and a quotation of a letter from Hadrian against informers. The second part asks the emperor to "subscribe" to Justin's petition.

Later he wrote his *Dialogue with the Jew Trypho,* in which texts like those in the *Apology* are given more complete exegesis and Trypho presents Jewish interpretations. The most important features are (1) the OT text(s) used by Justin, and (2) his picture of the nascent New Testament:

(1) In the OT exegesis of the *Apology,* Justin used "testimony sources" with texts already chosen by Christians, whereas in the *Dialogue* he used texts transmitted by Jews. He thought that the testimony texts were authentic, while the other version(s) had been corrupted. When he claimed

in the *Dialogue* that Jews had cut predictions of Christ out of their text he was comparing their version(s) with his own Christian book (Skarsaune 1987).

(2) The "New Testament" of Justin is especially interesting because he certainly knew the major Pauline epistles but never quoted from them, presumably because of the confusion over the epistles caused by Marcion's radical revisions. He knew and referred to the Apocalypse of John. He also knew several Gospels, which he sometimes identified for Greek readers as "memorabilia of the apostles" somewhat like the *Memorabilia of Socrates* by Xenophon. In his christological exegesis of Psalm 21 (22) (*Dial.* 99–107) he refers to the "memorabilia" 13 times, including one reference to the "memorabilia of Peter" for information found only in Mark 3:16–17 (partly Luke 6:14 D). This seems to show he knows Mark as a book, just as *Apol.* 61.4 reflects John 3:3, 5. He thus uses "the memorabilia compiled by the apostles and those who followed them" (*Dial.* 103.8). Other passages, however, are based on mixtures of texts which may well go back to traditions or anthologies before Justin's time (Bellinzoni 1967). This is not to say that he knew a pre-Tatianic *Diatessaron.* Both kinds of quotations are obviously opposed to Marcion's special edition. There seem to be no traces of Hebrews, the Pastoral Epistles, or the Catholic or General Epistles in Justin's writings.

His theology also deserves attention, for in regard to Christ he has taken the Logos doctrine developed in Hellenistic Judaism after Philo and combined it with a picture of prophecy fulfilled as set forth in his testimony book(s). What holds the two together is insistence upon the incarnation of the Logos, even though he never cites John 1:14.

ROBERT M. GRANT

JUSTUS (PERSON) [Gk *Iustos*]. **1.** The surname of Joseph, also called Barsabbas, a person put forward by the apostles along with Matthias as a candidate to replace Judas (Acts 1:23). Matthias and not Joseph Justus was the person on whom the lot fell and who was subsequently enrolled with the eleven apostles (1:26). Based on the criteria given for the candidates, Joseph Justus would have been one of those who accompanied the apostles "during all the time that the Lord Jesus went in and out among us, beginning from the baptism of John until the day when he was taken up from us" (1:21–22). The name Justus (righteousness) was not uncommon among Jews and proselytes living in the Greco-Roman world. This epithet, implying obedience and devotion to the Jewish Law, was perhaps given to him by other Jews.

2. Titius Justus, a Corinthian "worshipper of God" whose house was next to the synagogue (Acts 18:7). As a "worshipper of God" (Gk *sebomenos ton theon*), this gentile must have heard Paul speak about Jesus during Paul's stay in Corinth in the early 50s on his second journey. When Paul angrily separated himself from the synagogue, stating, according to Luke, "from now on I will go to the gentiles" (18:6), it was to the house of Titius Justus he went. Presumably Paul used this man's house for teaching and church meetings, although he probably continued to live with Prisca and Aquila (cf. 18:3). Acts does not say explicitly whether Titius Justus actually became a Christian. During Paul's Corinthian visit on his third journey (with Prisca and Aquila no longer living in Corinth) his, as well as the Church's, host was a certain Gaius (Rom 16:23), leading some commentators to harmonize Acts 18:7 and Rom 16:23. They have proposed that Titius Justus and Gaius, because each was Paul's host, were thus the same person whose full Roman *tria nomina* would have been Gaius Titius Justus (Goodspeed 1950: 382–83). The manuscript readings for Acts 18:7 offer the following variations: rather than "Titius Justus" (e.g., as in mss p. 74, B), some have "Titus Justus" (e.g., Sinaiticus, E); a few have only "Justus" (e.g., A); and a very few read only "Titus" (e.g., some Vg mss). The second and fourth readings have led some to guess that this Corinthian was the Titus of Paul's letters, but there is nothing further to support that proposal.

Acts locates the house of Titius Justus in Corinth next to the synagogue. In 1898 a heavy stone, a fragmented plinth once part of the lintel of a doorway, was found on the Lechaion Road in Corinth bearing the inscription in Greek "Synagogue of the Hebrews" (Finegan 1981: 152). Because of the style of the lettering it has been dated after the time of Paul. The synagogue it marked was probably the successor to the one in which Paul preached, probably on the same site. The inscription is poorly cut, suggesting that the synagogue members were not wealthy (cf. Paul's characterization of the Corinthians in 1 Cor 1:26). Because the stone is quite heavy, it probably lies close to the synagogue site. On that assumption, archaeologists point out that the synagogue was not far from the marketplace, on the east side of the Lechaion Road and in a predominantly residential district. The same description would thus hold for the house of Titius Justus if Acts is correct in locating it "next door" (18:7).

3. Jesus Justus, a Jewish Christian who sent greetings to the Colossians along with Paul from his place of imprisonment (Col 4:11). Jesus (the Greek form of Joshua or Jeshua) was his Jewish name. It was common for Jews to have this name (cf. Acts 13:6) up until the 2d cent. C.E. Justus was his Latin surname, which denoted loyal observance of the law, and was probably given to him because of his reputation. He is named along with Aristarchus and Mark as being the only "men of the circumcision" among Paul's "fellow workers for the kingdom of God" who were with Paul during his imprisonment. The presence of these Jewish-Christian missionaries was comforting to Paul (Col 4:11). This would be particularly the case in light of the earlier crisis at Antioch (Gal 2:11–12), and its aftereffects (cf. Gal; Phil 3) when Paul was opposed by many Jewish-Christian missionaries.

JOHN GILLMAN

JUTTAH (PLACE) [Heb *yuṭṭâ*]. A levitical city assigned to the tribe of Judah which appears in Josh 21:16, but omitted from the Chronicle's Hebrew text although found in some LXX versions of the Chronicler. Besides being mentioned in the Joshua levitical city list, Juttah appears in only one other OT text, the allotment lists of Judah in Josh 15:55. It is described as being in the SE hill country district of Maon along with Carmel and Ziph.

The first geographer to describe Juttah was Eusebius (*Onomast.* 108: 8–10). Eusebius wrote that *Iettan* was a very large Jewish village 18 Roman miles from Eleutheropolis in the middle of Darome in the Negeb. The site is not mentioned again until 1714 when Relandi (1714: 870) quoted the two Joshua texts and Eusebius. He suggested that Juttah was the birthplace of John the Baptist and the home of Zachariah and Elizabeth. Relandi argued that *polis Iouda* (city of Judah) of Luke 1:39 should read *polis Iouta* (city of Juttah). As with most of Relandi's commentaries, no identification is made.

It was E. Robinson (1841: 190) who made the first positive association of biblical Juttah with the village Yaṭṭā (M.R. 158095). Located in the Ziph district, just E of Hebron at the edge of the Judean wilderness, Yaṭṭā has been identified with biblical Juttah by Guérin (1869: 205–6), Wright (*WHAB,* 125) Aharoni (*LBHG,* 379), and Boling (1985: 25). The strategic location of this ancient city is important because of the watershed road that passes Yaṭṭā. This road extends N to Hebron, Jerusalem, and Shechem, and S to Eshtemoaʿ, Arad, and Mormah. There have been very few archaeological surveys conducted at Yaṭṭā and no excavations. The only historical period that has been identified is Byzantine, although the occupation of the site is obviously much older. Today a large Palestinian village which holds the biblical name sits on the site. Until an excavation is done, the ancient occupation of Yaṭṭā will be unknown. See Peterson 1977: 551–56.
